Nokia N93 approved by FCC

May 15 2006 - 02:03 AM ET | [Backpage](#), [Nokia](#)

The [Nokia N93](#) has been approved by the FCC (ID # QVVRM-55). Announced last month, the N93 is a very advanced handset that Nokia is marketing more as a mobile computer than cell phone. It's the successor to the N90, Nokia's first shipping N-Series phone.

Features of the N93 are plentiful:

- WLAN, 3G (WCDMA 2100 MHz), EDGE and tri-band GSM (900/1800/1900 MHz)
- QVGA screen
- 3.2 megapixel camera with Carl Zeiss optics and 3x optical zoom
- Video capture at 30 frames per second
- S60 3rd Edition software on Symbian OS
- miniSD card slot plus 0MB internal memory

Due to its advanced nature and radio frequencies, it's unlikely that the N93 will ship from a carrier in the US. It will be available for import though, similar to the other N-Series models.
