For over 70 years Meyer Rotary Airlock Valves have been leading the industry in design, workmanship, functionality, longevity and serviceability. These Rotary Airlock Valves are used where there's a need to minimize system air loss while transferring material between vessels with differing pressures. The video illustrates the basic components and functionality of the rotary valve and the three basic applications that it can be used for; metering and feeding, airlock, and airlock feeder. The valves can be used in a wide variety of applications such as agriculture, aggregates, asphalt, cement, food, ...more
