

Stabilization

Q1 What fields of view (FOV) does X4 support?

- MegaView: Suitable for wide-shooting and urban scenes. Vertical distortion is reduced in 16:9/2.35:1 ratios.
- MaxView: Widest angle with distortion, best for shooting open landscapes such as canyons and grass.
- ActionView: Compresses the space for an immersive first-person view, ideal for skiing, cycling, and more.
- UltraWide: Suitable for scenes requiring a wider view such as mountaineering, hiking, and other outdoor sports.
- Dewarp: Lower distortion, suitable for shots with people, such as vlogs.

Q2 How does X4's FlowState Stabilization work?

Insta360 X4's six-axis gyroscope and industry-leading FlowState stabilization ensure stable footage, even during action sports. The 360° Horizon Lock keeps the horizon level even when completely rotating the camera.
