Hello, is there any chance on getting a Superview-like mode like the one in the Hero 7? Asking this because i bought the Osmo Action but since i'm a biker i think it's a very important feature and now i feel like i want to send the osmo back and buy a The superview should be a software feature, so do you think would it be possible to get it in next firmware updates? Mayk with an higher resolution than 1080p and with rocksteady on...

Can you explain what "superview mode" is?

It's the famous GoPro mode that enable the camera to record video in 4:3 to gain FOV and then stretch the image to reach 16:9 ratio. Here is a link that explain the feature:

https://it.gopro.com/help/articles/question_answer/What-is-SuperView

And here is a video where you can see differences of FOV:

I also found Osmo Action to be fairly better than Hero 7 Black in every importat way, except the missing SuperView mode. mountainbiker, I truly miss this feature. As it is purely software function, I would love for it to be in some future FW update

It's not an easy option like in the GoPro, but for interest you can achieve similar

Thanks a lot for the great video! I have one question though: How can an almost %30 crop on a sensor which has 4000 pixels width in total, still have 3840 pixels resolution? 😊

It was actually a video I had on in the background so I didn't pay attention to the details. Was there a flaw in some of

[View full post](#)

No, not at all! It was an honest question...

This has been bugging me for quite some time, although nobody talks about it; and I think your video shows the source of confusion clearly:

Recording 4K with a 9MP resolution sensor (that is the 16:9 portion of the 12MP AO sensor) uses almost everything the sensor has. You really have a narrow margin on the sides before you reach the total of 3840 pixels (horizontal) you need. If you crop beyond that, you are not "really" recording at the resolution you claim any more...

Your video perfectly shows how much OA crops into the sensor with all the functions enabled. For the life of me, I honestly don't understand how OA can do that, and still get a real 4K, 3840 pixel readout...

Unless, of course, it can't, which then would open a whole new can of worms; so I would rather not go there yet 😊

[View full post](#)

Ahh, I understand your point now.

I suspect the answer is the one we don't want to think about ! For each crop it can only be having less than the 4K pixels ; so it must be upscaling back up to a 4K frame, hence losing detail.

You can do the same thing with the Osmo Action, but you'll just have to distort it in post.

The GoPro SuperView is just taking a full sensor 4:3 instead of 16:9 video, it then distorts it automatically down to a 16:9.

With the Osmo Action, you can also do a full sensor 4:3 video that has a wider view than its default 16:9. But then in post, just need to do the distortion to stretch it back into the 16:9 view.

However, it would be nice for the Osmo Action to have an option to just do it all in camera like the GoPro does.

I believe so... My rough estimate for the biggest crop (ratios from your video, thanks again) puts it at around 2900 pixels w 2.7K should be fine 😊

Hi,

Any updates of when the superview like feature for Osmo action might land? That would be a game changer and many of friends want to buy Osmo action but are retreating because of this missing feature

djiuser_nwvNkInLWWzL Posted at 5-14 14:42

2020 already, please for Superview Mode

As a off-piste skier this is a crucial feature. Am planning to get a new action camera in the next few months and from my r the Osmo Action does waaaay better than the GoPros in below 0 C degrees (which is often where I take all my shots). I use mount, so the superview is just perfect for getting my skis as well as the horizon. If the Osmo Action could make a FOV like GoPro Superview that enables RockSteady without losing to much of the FOV, then I would definitely buy it.
