CES 2024: THE EVIE RING IS THE FIRST WEARABLE SMART RING DESIGNED FOR WOMEN

RETAIL PRICING: \$269.00

[LEARN MORE ON EVIE](#)

Developed by Movano Health (Nasdaq: MOVE), the Evie Ring is the first wearable health ring designed specifically for women. Showcased at CES Unveiled 2024 this year, the Evie Ring will begin shipping at the end of January to consumers and is grounded in research from biometrics and interviews with more than 1,000 women. Let's take a closer look.

THE EVIE DIFFERENCE

Created with a small gap in the ring surface, the Evie ring is made from a scratch resistant and water resistant zirconium-based material called Liquidmetal®. The gap allows for daily fluctuations in finger size due to hormonal changes and other factors.

WHAT IT MEASURES

The Evie Ring uses medical-grade sensors to measure health metrics such as heart rate, heart rate variability, SpO2, respiration rate and skin temperature variability. It can also calculate menstrual health metrics such as

symptom and mood tracking and period and ovulation estimates. Additional metrics include sleep quality (sleep duration and sleep stages) and activity tracking metrics (activity minutes, calories burned and steps).

HOW IT INTERPRETS DATA

Evie uses user data to personalize the app and give feedback to users pertaining to their goals and health patterns over time. By using a custom AI engine, Evie searches for correlations across menstrual health, mood, energy, sleep and activities and offers users insight to help modify their behaviors in order to optimize daily routines.

THERE'S MORE

The Evie Ring is advertised with four days of battery life and has a portable charging case that can recharge the ring up to 10 times on one charge for easy access. The Evie Ring is currently available for preorder in the U.S. for \$269 with no monthly subscription fee and is currently only compatible with iOS devices. Evie is planning to support Android devices beginning in Q2 2024.

LIDA

Always the number cruncher, the former narrative journalist turned data scientist, can't help but find herself bursting with excitement with each new generation of tech gadgets. After all, predicting future trends is Lida's forte. Any gadget that survives Lida's torturous, adult working woman itinerary of over 700 notifications a day deserves praise!

AI dominated CES 2024, and Samsung is leading the charge with their revolutionary Galaxy S24 series. Packed with cutting-edge AI features, this phone promises to redefine the way you interact with your smartphone.

It's 2024, and Redmi is back with a fresh lineup of budget-friendly smartphones in their popular Note series! From the standard Note 13 to the feature-packed Pro+ 5G, there's a Redmi Note 13 for everyone.

At the gigantic Xreal CES 2024 booth, we were shocked to see a Nio ES8 on display surrounded by augmented reality glasses. What was it doing there?
