

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF CALIFORNIA

SMITH INTERFACE TECHNOLOGIES,
LLC,

Plaintiff,

v.

APPLE INC.,

Defendant.

Case No.: 23-CV-1187 TWR (DTF)

**TENTATIVE CLAIM
CONSTRUCTION ORDER**

Presently before the Court are Plaintiff Smith Interface Technologies, LLC and Defendant Apple Inc.’s Opening Claim Construction Briefs (ECF Nos. 163, 164) and Responsive Claim Construction Briefs (ECF Nos. 169, 170). The Court will be holding a claim construction hearing on September 24, 2025. In anticipation of the hearing, the Court issues the following Tentative Claim Construction Order.

BACKGROUND

I. Procedural History

Inventor Michael Smith “developed new advanced input and output techniques for mobile user interfaces[, (“UIs”)]” such as “multi-part gestures, where users can take successive actions, such as by touching, tapping, long-pressing, or sliding, and receive feedback at each step, whether visual or tactile (or both).” (*See* ECF No. 66 (“TAC”) ¶ 19.) “These mobile UI advances resulted in numerous patents, including U.S. Patent Nos.

1 10,642,413 (the “’413 Patent”); 10,649,578 (the “’578 Patent”); 10,649,580 (the “’580
2 Patent”); 10,656,754 (the “’754 Patent”); 10,656,755 (the “’755 Patent”); 10,656,758 (the
3 “’758 Patent”); 10,671,212 (the “’212 Patent”); 10,725,581 (the “’581 Patent”); 10,936,114
4 (the “’114 Patent”); and 11,740,727 (the “’727 Patent”) (collectively, the “Asserted
5 Patents”).” (*Id.* ¶ 17.) The Asserted Patents are all “continuation[s] of and claim[] priority
6 to numerous patents, patent applications, and provisional patent applications dating back
7 to U.S. Provisional Application No. 61/515,835, filed August 5, 2011.” (*See id.* ¶¶ 21–30.)
8 Smith is the sole named inventor of the Asserted Patents, all of which are assigned solely
9 to Plaintiff Smith Interface. (*See id.*)

10 On June 27, 2023, Smith Interface filed the instant action against Apple, asserting
11 nine claims of patent infringement as to each of the ’413, ’578, ’580, ’754, ’755, ’758,
12 ’212, ’581, and ’114 Patents (the “Original Asserted Patents”), (*see generally* ECF No. 1
13 (“Compl.”)), which was subsequently reassigned to the undersigned. (*See* ECF No. 4.)
14 The ’727 Patent issued on August 29, 2023, (*see* TAC ¶ 30), before Apple’s responsive
15 pleading deadline. (*See* ECF No. 21.) Accordingly, on the same day it had issued, Smith
16 Interface amended its Complaint pursuant to Federal Rule of Civil Procedure 15(a)(1) to
17 add a claim for infringement of the ’727 Patent. (*See generally* ECF No. 22 (“FAC”).)
18 Apple moved to dismiss the First Amended Complaint’s claims for willful and indirect
19 infringement on October 3, 2023. (*See generally* ECF No. 36.)

20 On October 25, 2023, Smith Interface requested leave to file an amended complaint
21 pursuant to Rule 15(a)(2). (*See generally* ECF No. 42.) The following day, the Court
22 granted Smith Interface’s request and denied as moot Apple’s original motion to dismiss,
23 (*see generally* ECF No. 43), and Smith Interface filed a Second Amended Complaint. (*See*
24 *generally* ECF No. 44). Apple then moved to dismiss the Second Amended Complaint’s
25 claims for willful and indirect infringement on November 9, 2023. (*See generally* ECF
26 No. 46.)

27 On March 5, 2024, the Court granted in part and denied in part Apple’s motion to
28 dismiss and granted Smith Interface leave to file an amended complaint. (ECF No. 63.)

1 On March 19, 2024, Smith Interface filed the operative Third Amended Complaint. (*See*
2 *generally* TAC.)

3 Between June 26, 2024, and August 1, 2024, Apple filed *inter partes* review (“IPR”)
4 petitions with the Patent Trial and Appeal Board (“PTAB”), challenging the validity of all
5 the asserted claims from the Asserted Patents except for certain asserted claims from the
6 ’754 Patent. (*See* ECF No. 105; ECF No. 110-1 at 3–4.) On August 5, 2024, the Court
7 granted Apple’s partial motion to dismiss Smith Interface’s Third Amended Complaint and
8 dismissed with prejudice Smith Interface’s claims for pre-suit willful and induced patent
9 infringement. (*See* ECF No. 112 at 13.) On August 19, 2024, Apple filed an answer to the
10 operative complaint. (ECF No. 116.) On September 5, 2024, Apple filed a petition for *ex*
11 *parte* reexamination with the U.S. Patent and Trademark Office (“PTO”), challenging the
12 validity of the remaining asserted claims from the ’754 Patent. (*See* ECF No. 119.) On
13 October 2, 2024, the Court stayed the action pending issuance of the PTAB’s institution
14 decisions on Apple’s pending IPR petitions as to the Asserted Patents. (ECF No. 127.)

15 In the subsequent reexamination proceedings as to the ’754 Patent, the PTO
16 Examiner confirmed the patentability of 81 claims from the ’754 Patent. (*See* ECF No.
17 140 at 1.) On May 5, 2025, the Court lifted the stay on the condition that Smith Interface
18 elect to proceed in this action only on twenty or fewer claims from the ’754 Patent that had
19 been confirmed during the reexamination proceedings. (*See* ECF No. 141.) On May 14,
20 2025, Smith Interface filed its initial notice of claim election, electing to proceed on claims
21 83, 111, 125, 134, 136, 142, 144, 152, 162, 163, 165, 188, 193, 196, 205, 217, 218, 219,
22 and 221 from the ’754 Patent. (*See* ECF No. 143.) In the filing, Smith Interface also
23 requested that the Court dismiss all of its other previously asserted claims of patent
24 infringement without prejudice. (*See id.*) On May 21, 2025, the Court granted Smith
25 Interface’s motion and dismissed without prejudice all of Smith Interface’s other
26 previously asserted claims of patent infringement from the action. (*See* ECF No. 145.)

27 On May 21, 2025, the Court issued an amended scheduling order. (*See* ECF No.
28 144.) On August 19, 2025, Smith Interface filed a second notice of claim election, electing

1 to proceed on only claims 111, 125, 142, 152, 162, 165, 188, 193, 218, and 219 from the
2 '754 Patent. (See ECF No. 172.)

3 By the present claim construction briefs, the parties agree upon the construction of
4 one claim term and dispute the proper construction of three claim terms from the '754
5 Patent. (See generally ECF Nos. 163, 164.)

6 **II. The '754 Patent**

7 The '754 Patent is now the only asserted patent in this action, and the following
8 claims from the '754 Patent are the only asserted claims in this action: claims 111, 125,
9 142, 152, 162, 165, 188, 193, 218, and 219. (See ECF No. 172.) The '754 Patent is entitled
10 “devices and methods for navigating between user interfaces,” and was issued on May 19,
11 2020. U.S. Patent No. 10,656,754, at [45], [54] (filed May 19, 2020). The inventions
12 claimed in the '754 Patent related generally to touch screens on electronic devices,
13 specifically touch screens that display and blur objects based on gestures by the device
14 user. See *id.* at col. 1 ll. 35–55, fig. 22.

15 Figure 22 from the specification of the '754 Patent is depicted below and depicts a
16 3D layered user interface where displayed objects exist in one of a plurality of layers and
17 a portion of the objects can be blurred based on gestures by the device user:

1 *Id.* fig. 22, col. 68 ll. 7–10.

2 As an example of an asserted claim, dependent claim 193 (which depends from
3 dependent claim 186 which depends from independent claim 2) recites:

4 **2.** An apparatus, comprising:

5 at least one non-transitory memory;

6 a touch screen; and

7 one or more processors in communication with the at least one non-transitory
8 memory, and the touch screen, wherein the one or more processors execute
9 instructions in the at least one non-transitory memory, to cause the apparatus
to:

10 display an object and at least one other object;

11 detect at least part of a gesture on the touch screen; and

12 during detection of at least a portion of the gesture before a completion
13 thereof is detected, blur, based on a change in a magnitude of the
14 gesture being detected on the touch screen, at least a portion of the at
least one other object.

15 **186.** The apparatus of claim 2, wherein the apparatus is configured such that:
16 the at least part of the gesture is detected on the touch screen on an edge of
the touch screen;

17 the magnitude of the gesture includes a distance magnitude;

18 the gesture includes a swipe gesture;

19 a magnitude of the blurring is continuously increased as a continuous function
20 of an increase in the magnitude of the gesture being detected on the touch
21 screen;

22 a magnitude of the blurring is continuously decreased as a continuous function
of another change; and

23 when the magnitude of the gesture detected on the touch screen is detected to
24 increase above a distance threshold, a menu is displayed with at least one
option, such that:

25 the at least one other object is displayed via a first virtual display layer,

26 the menu is displayed in a second virtual display layer that appears
27 above the first virtual display layer, and

28 the menu remains displayed after a completion of the gesture.

1 193. The apparatus of claim **186**, wherein the apparatus is configured such
2 that:

3 the at least part of the gesture is detected on the touch screen adjacent to the
4 object;

5 the object is displayed to move with at least some of the gesture;

6 the object includes a battery-related icon;

7 when a first duration of touch being applied to the touch screen on at least one
8 option of the menu and a subsequent cessation of the first duration of touch
9 being applied to the touch screen on the at least one option are detected: an
10 action associated with the at least one option is performed; and

11 when a second duration of touch, that is greater than the first duration, being
12 applied to the touch screen on the at least one option is detected: another menu
13 including at least one other option is displayed.

14 '754 Patent col. 95 ll. 35–49, col. 109 l. 64 to col. 110 l. 19, col. 110 ll. 44–60.

15 **LEGAL STANDARD**

16 Claim construction “is exclusively within the province of the court [to decide],” not
17 the jury. *Markman v. Westview Instruments, Inc.*, 517 U.S. 370, 373 (1996) (en banc); *see*
18 *Teva Pharm. USA, Inc. v. Sandoz, Inc.*, 574 U.S. 318, 326 (2015) (holding claim
19 construction is an issue of law for the court to decide). Although claim construction is
20 ultimately a question of law, “subsidiary factfinding is sometimes necessary.” *Teva*, 574
21 U.S. at 326.

22 “It is a ‘bedrock principle’ of patent law that the ‘claims of a patent define the
23 invention to which the patentee is entitled the right to exclude.’” *Phillips v. AWH Corp.*,
24 415 F.3d 1303, 1312 (Fed. Cir. 2005) (en banc) (citations omitted). “The purpose of claim
25 construction is to ‘determin[e] the meaning and scope of the patent claims asserted to be
26 infringed.’” *O2 Micro Int’l Ltd. v. Beyond Innovation Tech. Co.*, 521 F.3d 1351, 1360
27 (Fed. Cir. 2008) (quoting *Markman*, 52 F.3d at 976); *accord Kaufman v. Microsoft Corp.*,
28 34 F.4th 1360, 1369 (Fed. Cir. 2022).

Claim terms “are generally given their ordinary and customary meaning[,]” which
“is the meaning that the term would have to a person of ordinary skill in the art

1 [(“POSITA”)] in question at the time of the invention.” *Phillips*, 415 F.3d at 1312–13. “In
2 some cases, the ordinary meaning of claim language as understood by a [POSITA] may be
3 readily apparent even to lay judges, and claim construction in such cases involves little
4 more than the application of the widely accepted meaning of commonly understood
5 words.” *Id.* at 1314. “However, in many cases, the meaning of a claim term as understood
6 by persons of skill in the art is not readily apparent.” *O2 Micro*, 521 F.3d at 1360. If the
7 meaning of the term is not readily apparent, the court must look to ““those sources available
8 to the public that show what a person of skill in the art would have understood disputed
9 claim language to mean.”” *Phillips*, 415 F.3d at 1314 (quoting *Innova/Pure Water, Inc. v.*
10 *Safari Water Filtration Sys., Inc.*, 381 F.3d 1111, 1116 (Fed. Cir. 2004)). “Those sources
11 include ‘the words of the claims themselves, the remainder of the specification, the
12 prosecution history, and extrinsic evidence.’” *Id.* (quoting *Innova*, 381 F.3d at 1116); *see*
13 *also Ericsson, Inc. v. D-Link Sys., Inc.*, 773 F.3d 1201, 1217–18 (Fed. Cir. 2014).

14 In determining the proper construction of a claim, a court should first look to the
15 language of the claims. *See Allergan Sales, LLC v. Sandoz, Inc.*, 935 F.3d 1370, 1373 (Fed.
16 Cir. 2019) (“[C]laim construction must begin with the words of the claims themselves.”);
17 *Source Vagabond Sys. Ltd. v. Hydrapak, Inc.*, 753 F.3d 1291, 1299 (Fed. Cir. 2014) (“[A]
18 claim construction analysis must begin and remain centered on the claim language
19 itself.”). The context in which a disputed term is used in the asserted claims may provide
20 substantial guidance as to the meaning of the term. *See Phillips*, 415 F.3d at 1314.

21 A court must also read claims “in view of the specification, of which they are a part.”
22 *Markman*, 52 F.3d at 979; *see also* 35 U.S.C. § 112(b) (“The specification shall conclude
23 with one or more claims particularly pointing out and distinctly claiming the subject matter
24 which the inventor or a joint inventor regards as the invention.”). ““Apart from the claim
25 language itself, the specification is the single best guide to the meaning of a claim term.””
26 *Vederi, LLC v. Google, Inc.*, 744 F.3d 1376, 1382 (Fed. Cir. 2014) (quoting *AIA Eng’g Ltd.*
27 *v. Magotteaux Int’l S/A*, 657 F.3d 1264, 1272 (Fed. Cir. 2011)).

28 ///

1 But “[t]he written description part of the specification does not delimit the right to
2 exclude. That is the function and purpose of claims.” *Markman*, 52 F.3d at 980. Therefore,
3 “it is improper to read limitations from a preferred embodiment described in the
4 specification—even if it is the only embodiment—into the claims absent a clear indication
5 in the intrinsic record that the patentee intended the claims to be so limited.” *Dealertrack,*
6 *Inc. v. Huber*, 674 F.3d 1315, 1327 (Fed. Cir. 2012); *accord Openwave Sys., Inc. v. Apple*
7 *Inc.*, 808 F.3d 509, 514 (Fed. Cir. 2015).

8 In addition to the claim language and the specification, the patent’s prosecution
9 history may be considered if it is in evidence. *Phillips*, 415 F.3d at 1317. The prosecution
10 history “consists of the complete record of the proceedings before the PTO and includes
11 the prior art cited during the examination of the patent.” *Id.* “Like the specification, the
12 prosecution history provides evidence of how the PTO and the inventor understood the
13 patent.” *Id.* “Yet because the prosecution history represents an ongoing negotiation
14 between the PTO and the applicant, rather than the final product of that negotiation, it often
15 lacks the clarity of the specification and thus is less useful for claim construction purposes.”
16 *Id.* In addition, a court should also consult the prosecution history “so that the court can
17 exclude any interpretation that was disclaimed during prosecution.” *Sorensen v. Int’l*
18 *Trade Comm’n*, 427 F.3d 1375, 1378 (Fed. Cir. 2005) (citing *Phillips*, 415 F.3d at 1317).

19 In most situations, analysis of the intrinsic evidence will resolve claim construction
20 disputes. *See Vitronics*, 90 F.3d at 1583; *see also Teva*, 574 U.S. at 331; *Seabed*
21 *Geosolutions (US) Inc. v. Magseis FF LLC*, 8 F.4th 1285, 1287 (Fed. Cir. 2021) (“If the
22 meaning of a claim term is clear from the intrinsic evidence, there is no reason to resort to
23 extrinsic evidence.”). However, “[w]here the intrinsic record is ambiguous, and when
24 necessary,” district courts may “rely on extrinsic evidence, which ‘consists of all evidence
25 external to the patent and prosecution history, including expert and inventor testimony,
26 dictionaries, and learned treatises.’” *Power Integrations, Inc. v. Fairchild Semiconductor*
27 *Int’l, Inc.*, 711 F.3d 1348, 1360 (Fed. Cir. 2013) (quoting *Phillips*, 415 F.3d at 1317). A
28 court must evaluate all extrinsic evidence in light of the intrinsic evidence. *Phillips*, 415

1 F.3d at 1319. “[E]xtrinsic evidence is to be used for the court’s understanding of the
2 patent, not for the purpose of varying or contradicting the terms of the claims.” *Genuine*
3 *Enabling Tech. LLC v. Nintendo Co.*, 29 F.4th 1365, 1373 (Fed. Cir. 2022); *see also Summit*
4 *6, LLC v. Samsung Elecs. Co.*, 802 F.3d 1283, 1290 (Fed. Cir. 2015) (“Extrinsic evidence
5 may not be used ‘to contradict claim meaning that is unambiguous in light of the intrinsic
6 evidence.’”). In cases where subsidiary facts contained in the extrinsic evidence “are in
7 dispute, courts will need to make subsidiary factual findings about that extrinsic evidence.”
8 *Teva*, 574 U.S. at 332.

9 “[D]istrict courts are not (and should not be) required to construe every limitation
10 present in a patent’s asserted claims.” *O2 Micro*, 521 F.3d at 1362; *see also Eon Corp. IP*
11 *Holdings v. Silver Spring Networks*, 815 F.3d 1314, 1318–19 (Fed. Cir. 2016) (“[O]nly
12 those terms need be construed that are in controversy, and only to the extent necessary to
13 resolve the controversy.”). In certain situations, it is appropriate for a court to determine
14 that a claim term needs no construction and its plain and ordinary meaning applies. *O2*
15 *Micro*, 521 F.3d at 1360; *Phillips*, 415 F.3d at 1314. But “[a] determination that a claim
16 term ‘needs no construction’ or has the ‘plain and ordinary meaning’ may be inadequate
17 when a term has more than one ‘ordinary’ meaning or when reliance on a term’s ‘ordinary’
18 meaning does not resolve the parties’ dispute.” *O2 Micro*, 521 F.3d at 1361. If the parties
19 dispute the scope of a certain claim term, it is the court’s duty to resolve the dispute. *Id.* at
20 1362; *see also Eon*, 815 F.3d at 1319.

21 ANALYSIS

22 I. “virtual display layer”

23 The Parties agree that the term “virtual display layer” should be construed as “one
24 or more display elements that appear at the same apparent depth of display.” (See ECF
25 No. 163 at 7.) The Parties’ proposed construction is consistent with the ’754 Patent’s
26 specification, which provides: “In the context of the present description, a virtual display
27 layer refers to a collection of display elements which have all been assigned the same
28 apparent depth within the 3D layered user interface.” ’754 Patent col. 68 ll. 41–42.

1 Accordingly, the Court is inclined to adopt the Parties’ agreed-upon construction for the
2 claim term and construe “virtual display layer” as “one or more display elements that
3 appear at the same apparent depth of display.”

4 **II. “adjacent”**

5 Apple argues that the claim term “adjacent” is indefinite, (*see* ECF No. 163 at 7),
6 while Smith Interface contends that the claim term does not need to be construed and
7 instead it should be given its plain and ordinary meaning. (*See* ECF No. 164 at 6.)

8 “Definiteness is a statutory requirement for patentability.” *Niazi*, 30 F.4th at 1346.
9 Under 35 U.S.C. § 112(b), a patent must “conclude with one or more claims particularly
10 pointing out and distinctly claiming the subject matter which the applicant regards as the
11 invention.” 35 U.S.C. § 112(b).

12 “A claim fails to satisfy this statutory requirement and is thus invalid for
13 indefiniteness if its language, when read in light of the specification and the prosecution
14 history, ‘fail[s] to inform, with reasonable certainty, those skilled in the art about the scope
15 of the invention.’” *Interval Licensing LLC v. AOL, Inc.*, 766 F.3d 1364, 1369–70 (Fed.
16 Cir. 2014) (quoting *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014));
17 *see Infinity Computer Prod., Inc. v. Oki Data Americas, Inc.*, 987 F.3d 1053, 1059 (Fed.
18 Cir. 2021) (“‘[W]e look to the patent record—the claims, specification, and prosecution
19 history—to ascertain if they convey to one of skill in the art with reasonable certainty the
20 scope of the invention claimed.’” (quoting *Teva Pharms.*, 789 F.3d at 1341)). This
21 “reasonable certainty” standard “reflects a ‘delicate balance’ between ‘the inherent
22 limitations of language’ and providing ‘clear notice of what is claimed.’” *Guangdong
23 Alison Hi-Tech Co. v. Int’l Trade Comm’n*, 936 F.3d 1353, 1359 (Fed. Cir. 2019). “Th[e]
24 standard ‘mandates clarity, while recognizing that absolute precision is unattainable.’”
25 *Nevro Corp. v. Bos. Sci. Corp.*, 955 F.3d 35, 39 (Fed. Cir. 2020) (quoting *Nautilus*, 572
26 U.S. at 910); *see also BASF Corp. v. Johnson Matthey Inc.*, 875 F.3d 1360, 1365 (Fed. Cir.
27 2017) (“‘Reasonable certainty’ does not require ‘absolute or mathematical precision.’”).

28 ///

1 “General principles of claim construction apply to indefiniteness allegations.”
2 *HZNP Medicines LLC v. Actavis Lab ’ys UT, Inc.*, 940 F.3d 680, 688 (Fed. Cir. 2019). The
3 party asserting indefiniteness bears “the burden of proving indefiniteness by clear and
4 convincing evidence.” *BASF*, 875 F.3d at 1365 (citing *Biosig Instruments, Inc. v. Nautilus,*
5 *Inc.*, 783 F.3d 1374, 1377 (Fed. Cir. 2015)); *see also Microsoft Corp. v. i4i Ltd. P’ship*,
6 564 U.S. 91, 95 (2011) (holding that 35 U.S.C. § 282 “requires an invalidity defense to be
7 proved by clear and convincing evidence”).

8 The claim term “adjacent” is contained in dependent claim 193. Dependent claim
9 193 recites an apparatus containing a touch screen, at least one non-transitory memory, and
10 one or more processors, causing the apparatus to, among other things, “display an object
11 and at least one other object” and “detect at least part of a gesture on the touch screen”
12 where “at least part of the gesture is detected on the touch screen adjacent to the object.”
13 ’754 Patent col. 95 ll. 36–38, col. 110 ll. 46–47. The word “adjacent” is a common word
14 with the widely accepted meaning of “[n]ext to or very near something else; neighbouring;
15 bordering, contiguous; adjoining.” OXFORD ENGLISH DICTIONARY, https://www.oed.com/dictionary/adjacent_adj?tl=true#12665125; CAMBRIDGE DICTIONARY, <https://dictionary.cambridge.org/us/dictionary/english/adjacent> (defining “adjacent” as “very
18 near, next to, or touching”); MERRIAM-WEBSTER DICTIONARY, <https://www.merriam-webster.com/dictionary/adjacent> (defining “adjacent” as “not distant : nearby”); *see also*
19 *Phillips*, 415 F.3d at 1314 (“In some cases, the ordinary meaning of claim language as
20 understood by a [POSITA] may be readily apparent even to lay judges, and claim
21 construction in such cases involves little more than the application of the widely accepted
22 meaning of commonly understood words.”); *Extremity Med., LLC v. Fusion Orthopedics,*
23 *LLC*, No. CV-22-00723-PHX-GMS, 2023 WL 4408270, at *11 (D. Ariz. July 7, 2023)
24 (“[C]ourts routinely decline to construe ‘adjacent’ in patent claims and afford the word its
25 conventional definition.”). Thus, in the context of the claim language, the claim term
26 “adjacent” has a clear meaning, and it means that the claimed gesture is detected next to or
27 very near the displayed object. (*See also* ECF No. 170 at 2 (“The parties agree that the
28

1 term ‘adjacent’ in each asserted claim refers to a spatial relationship between a detected
2 gesture and a displayed object’).)

3 Apple argues that the claim term “adjacent” is indefinite because in this context it is
4 a subjective term of degree that does not provide any objective guidance to a POSITA
5 regarding the scope of its boundaries. (See ECF No. 163 at 7.) “[T]erms of degree are not
6 ‘inherently indefinite.’” *Liberty Ammunition, Inc. v. United States*, 835 F.3d 1388, 1396
7 (Fed. Cir. 2016) (quoting *Interval Licensing*, 766 F.3d at 1370); see also *Berkheimer v. HP*
8 *Inc.*, 881 F.3d 1360, 1364 (Fed. Cir. 2018) (“We do not hold that all terms of degree are
9 indefinite.”). “Thus, ‘a patentee need not define his invention with mathematical precision
10 in order to comply with the definiteness requirement.’” *Sonix Tech. Co. v. Publ’ns Int’l,*
11 *Ltd.*, 844 F.3d 1370, 1377 (Fed. Cir. 2017). Nevertheless, “claims having terms of degree
12 will fail for indefiniteness unless they ‘provide objective boundaries for those of skill in
13 the art’ when read in light of the specification and the prosecution history.” *Liberty*
14 *Ammunition*, 835 F.3d at 1396 (quoting *Interval Licensing*, 766 F.3d at 1370); see also
15 *Sonix*, 844 F.3d at 1378 (“[T]he written description is key to determining whether a term
16 of degree is indefinite.”). For example, “a term of degree fails to provide sufficient notice
17 of its scope if it depends ““on the unpredictable vagaries of any one person’s opinion.””
18 *Interval Licensing*, 766 F.3d at 1371 (quoting *Datamize, LLC v. Plumtree Software, Inc.*,
19 417 F.3d 1342, 1350 (Fed. Cir. 2005)); see also, e.g., *Berkheimer*, 881 F.3d at 1364 (finding
20 claims indefinite where “[t]he specification contain[ed] no point of comparison for skilled
21 artisans to determine an objective boundary” for the claim term).

22 Apple argues that the ’754 Patent fails to provide the required objective boundaries
23 for definiteness because the ’754 Patent does not provide the answer to questions such as:

24 [I]s a shared boundary required? If so, how much of a shared boundary? If
25 not, how close or far away from the object must the gesture be detected?
26 Would a gesture that is one pixel away from the displayed object be
27 considered “adjacent”? What about two pixels? Or five? Would a gesture or
28 touch that is 1mm away from the displayed object be considered “adjacent”?
What about 5mm? Or 10mm?

///
28

(See ECF No. 163 at 9; *see also id.* at 12 (“[T]he specification provides no examples, guidance, or objective criteria in order to determine how close together two locations must be to be considered adjacent, whether measured in pixels, millimeters or any other unit, such that one infringes the claims—or, just as importantly, how far apart must two locations be so as to not be adjacent, such that one can avoid infringing the claim.”).) These questions posed by Apple reflect a misunderstanding of the definiteness requirement for patent claims. In seeking answers to those questions, Apple is requesting that the ’754 Patent define the invention with mathematical precision. But the Federal Circuit has repeatedly stated that “a patentee need not define his invention with mathematical precision in order to comply with the definiteness requirement.” *Sonix*, 844 F.3d at 1377; *see also, e.g., Niazi*, 30 F.4th at 1347; *Guangdong Alison*, 936 F.3d at 1359; *BASF*, 875 F.3d at 1365. “Indeed, patentees often use descriptive words to avoid a strict numerical boundary to the specified parameter.” *Niazi*, 30 F.4th at 1347 (cleaned up). And that is precisely what has happened here. The ’754 Patent uses the descriptive word “adjacent” (rather than a strict numerical boundary) to define the spatial relationship between the detected gesture and the displayed object, which is permissible under the definiteness requirement. *See Niazi*, 30 F.4th at 1347.

That the claim term “adjacent” is not indefinite is supported by a review of the specification. In describing embodiments of the claimed invention, the ’754 Patent’s specification explains:

In the context of the present description, the selection area refers to a region of the display, or a region of an object pictured on the display, which has been chosen for selection. The calculation of the selection area may be based upon one or more factors, including, but not limited to, a contact pressure level, a touch state, a contact area, a contact point, a selection boundary, a selection boundary geometry, and/or any other information derived from user interaction.

’754 Patent col. 18 ll. 5–12. The specification further explains:

[T]he calculation of the selection area may depend upon the context of the selection. Specifically, the selection boundary may be dependent upon the

1 type of content on or near a point or area associated with the selection,
2 including but not limited to, a contact point, a contact area, a cursor, a user
3 focus, etc.

4 *Id.* at col. 20 ll. 19–24. Here, the specification explains what a selection area is, how it can
5 be calculated, and that the selection boundary may be “on or near” a point or area associated
6 with the selection.

7 The specification goes on to describe the “context determination zone.” ’754 Patent
8 col. 26 l. 50, fig 6. “[A] context determination zone refers to the area that is examined
9 while determining the context of a selection,” and it “may be a predefined shape (e.g.,
10 circle, square, etc.) of predefined size, centered on the contact point” or it “may be located
11 such that the contact point is off-center.” *Id.* at col. 26 ll. 52–65. The specification then
12 goes on to explain:

13 In various embodiments, the determination as to whether there is a user
14 interface control widget within the context determination zone begins with
15 determining whether there is a UI control widget located at the contact point
16 upon which the zone is based. In this way, time is not wasted determining the
context of a well-aimed contact point.

17 If a UI control widget is not located at the contact point, then it may be
18 determined if there is a UI control widget in the vicinity, within the context
19 determination zone. In various embodiments, this determination may be
20 performed using the bounding boxes associated with user interface elements.
21 Within the context of the present description, a bounding box refers to a
22 rectangle within which a user interface control widget may reside. In some
embodiments, a bounding box may be the smallest rectangle which may
contain a particular user interface control widget. In this way, detection of
user interface control widgets whose shape is not rectangular is simplified.

23 *Id.* at col. 27 ll. 29–46.

24 The specification then provides examples of how the bounding box can be used to
25 determine if there is a UI control widget within the context determination zone. *See id.* at
26 col. 27 ll. 47–64. If “there is at least one user interface control widget within the context
27 determination zone, then a context sensitive UI control widget selection function is
28 chosen.” ’754 Patent col. 27 l. 65 to col. 28 l. 1; *see also id.* at col. 30 ll. 4–7 (“[A] user

1 may make contact with and exert pressure upon an interaction surface, with a contact point
2 near a drop down menu. The user may increase the contact pressure until the drop down
3 menu is highlighted.”), col. 34 ll. 15–18 (“[I]f there is a selectable graphic within the
4 context determination zone, but not at the contact point, the selection function may define
5 the selection based upon the entire selected object.”). In describing how bounding boxes
6 can be used to determine if a user interface object is near or in the vicinity of a contact
7 point so that the object can be selected, the specification provides objective boundaries to
8 a POSITA regarding the scope of the claim term “adjacent.” *See Niazi*, 30 F.4th at 1347
9 (explaining that a specification can provide objective boundaries to a POSITA by providing
10 “exemplary designs and specific examples”). Thus, the Court is inclined to conclude that
11 the term is not indefinite.

12 In response, Apple contends that these portions of the specification do not relate to
13 the claim term “adjacent” because they do not contain the word “adjacent” and instead
14 contain the word “near” or the phrase “in the vicinity of.” (*See* ECF No. 163 at 13–14.)
15 Apple’s contention is flawed because it fails to appreciate that the word “near” is included
16 as part of the meaning of the word “adjacent.”¹ In sum, the Court is inclined to conclude
17 that the specification provides objective boundaries to a POSITA regarding the scope of
18 the term “adjacent” contained in the claim language.

19 In addition, that the claim term “adjacent” is not indefinite is also supported by
20 Apple’s and its expert’s statements during the *ex parte* reexamination proceedings for the
21 ’754 Patent. In its request for reexamination of the ’754 Patent that it filed with the PTO,
22 Apple and its expert were able to apply the claim term “adjacent” to the prior art at issue
23 without any difficulty or uncertainty. (*See* ECF No. 164-10 (“Poulos Decl. Ex. 9”) at
24 274–75.) In that filing, Apple explained: “[I]n order to provide some leeway for a user, a
25

26
27 ¹ Indeed, as explained below, during the *ex parte* reexamination proceedings as to the ’754 Patent,
28 Apple treated the word “near” as being interchangeable with the term “adjacent.” (*See* ECF No. 164-10,
Poulos Decl. Ex. 9 at 275 (“[A] user could begin a gesture either on or near (e.g., adjacent) to an object.”).)

1 POSITA would have at least found it obvious to configure the apparatus of the Beaumier-
2 Chaudhri-Wang combination such that a user could begin a gesture either on or near (e.g.,
3 adjacent) to an object.” (*Id.* at 275.)

4 The Federal Circuit has explained that application of the term at issue by the
5 challenger and its expert without any uncertainty during reexamination proceedings is
6 “evidence that a skilled artisan d[oes] understand the scope of this invention with
7 reasonable certainty.” *Sonix*, 844 F.3d at 1380; see *Liqwd, Inc. v. L’Oreal USA, Inc.*, 720
8 F. App’x 623, 631 (Fed. Cir. 2018) (“Evidence of a challenger’s own ability to apply a
9 term without unreasonable uncertainty counts against an indefiniteness contention.”).
10 Thus, application of the term by Apple and its expert without issue during the *ex parte*
11 reexamination proceedings is evidence that a skilled artisan understands the scope of this
12 invention with reasonable certainty. See *id.*; see, e.g., *Samesurf, Inc. v. Intuit, Inc.*, No.
13 3:22-CV-00412-RSH-DDL, 2025 WL 1287805, at *15 (S.D. Cal. May 2, 2025)
14 (“[A]pplication of the term by Intuit and its expert without issue during the IPR
15 proceedings is evidence that a skilled artisan understands the scope of this invention with
16 reasonable certainty.”); *DNA Genotek Inc. v. Spectrum Sols. L.L.C.*, No. 3:21-CV-00516-
17 RSH-DDL, 2022 WL 17331255, at *10 (S.D. Cal. Nov. 29, 2022) (relying on accused
18 infringer and its expert’s ability to apply claim term without issue during their invalidity
19 analysis in IPR proceedings in rejecting indefiniteness challenge), *aff’d*, No. 2023-2017,
20 2025 WL 502040 (Fed. Cir. Feb. 14, 2025). Indeed, the statement above shows not only
21 that Apple and its expert were able to understand and apply the term “adjacent” without
22 any issue, but it also shows that Apple and its expert understood the term to encompass the
23 plain meaning of the word “adjacent,” *i.e.*, next to or very near something else. (See Poulos
24 Decl. Ex. 9 at 275 (“either on or near (e.g., adjacent)”)).)

25 To support its indefiniteness challenge, Apple has provided the Court with extrinsic
26 evidence suggesting that the term “adjacent” is “somewhat heuristic” when used in the
27 field of computer graphics. (See ECF No. 163 at 9 (citing ECF No. 163-6, Ex. 5 (Dictionary
28 of Computer Vision and Image Processing))). This extrinsic evidence is not persuasive.

1 As explained above, the intrinsic record (the specification) provides objective boundaries
2 for the claim term “adjacent,” and extrinsic evidence cannot be used to vary or contradict
3 intrinsic evidence. *See Genuine Enabling Tech.*, 29 F.4th at 1373; *Summit 6*, 802 F.3d at
4 1290. In addition, Apple’s extrinsic evidence is contradicted by other more persuasive
5 extrinsic evidence, specifically, Apple and its own expert’s ability to understand and apply
6 the claim term “adjacent” during the reexamination proceedings.

7 In sum, the Court is tentatively inclined to conclude that Apple has failed to
8 demonstrate that the claim term “adjacent” is indefinite. In addition, the Court is inclined
9 to construe the claim term “adjacent” as “next to or very near something else.”²

10 **III. “distance magnitude [of the gesture]”**

11 Apple proposes that the claim term “distance magnitude [of the gesture]” be
12 construed as “length [of the gesture].” (ECF No. 163 at 17.) Smith Interface argues that
13 the claim term does not need to be construed and instead the Court should give the claim
14 term its plain and ordinary meaning. (ECF No. 164 at 17.)

15 The Court begins its analysis of the parties’ claim construction dispute by examining
16 the claim language. The claim language in dependent claim 38 is particularly relevant in
17 resolving the Parties’ dispute here. Dependent claim 38 recites: “The apparatus of claim
18 27, wherein the apparatus is configured such that the distance magnitude includes a length
19 magnitude, and the distance threshold includes a length magnitude.” ’754 Patent col. 98
20 ll. 15–18. The Court is inclined to conclude that Apple’s proposed construction is incorrect
21 in light of this claim language.

22 ///

23
24
25 ² In support of its position that the claim term “adjacent” is not indefinite, Smith Interface notes that,
26 to its knowledge, no district court has ever held that the claim term “adjacent” is indefinite. (*See* ECF No.
27 164 at 2–3, 6–7; ECF No. 169 at 1–2.) Those cases involved unrelated patents, however, and Apple is
28 correct that “unrelated patent[s] ‘shed[] no light’ on the claims in the patent at issue.” *Goldenberg v.*
Cytogen, Inc., 373 F.3d 1158, 1167 (Fed. Cir. 2004); *see also Apple Inc. v. Motorola, Inc.*, 757 F.3d 1286,
1312 (Fed. Cir. 2014), *overruled on other grounds by Williamson v. Citrix Online, LLC*, 792 F.3d 1339
(Fed. Cir. 2015) (“[S]tatements made in unrelated applications are not relevant to claim construction.”).

Apple’s proposed construction treats the term “distance magnitude” as being synonymous with the word “length.” But the claim language in dependent claim 38 clearly treats “distance magnitude” as being different from “length magnitude.” *See Bd. of Regents of the Univ. of Tex. Sys. v. BENQ Am. Corp.*, 533 F.3d 1362, 1371 (Fed. Cir. 2008) (“Different claim terms are presumed to have different meanings.”); *see also Neville v. Found. Constructors, Inc.*, 972 F.3d 1350, 1357 (Fed. Cir. 2020) (“A claim construction that renders asserted claims facially nonsensical cannot be correct.”). The claim language explains that the “length magnitude” is included within the “distance magnitude,” but suggests that the term “distance magnitude” is broader than the term “length magnitude” and does not necessarily need to include a “length magnitude.” *See Trs. of Columbia Univ. v. Symantec Corp.*, 811 F.3d 1359, 1370 (Fed. Cir. 2016) (explaining that “each claim in a patent is presumptively different in scope” and that dependent claims “are presumed to be narrower than the independent claims on which they depend”); *Acumed LLC v. Stryker Corp.*, 483 F.3d 800, 806 (Fed. Cir. 2007) (“[T]he presence of a dependent claim that adds a particular limitation raises a presumption that the limitation in question is not found in the independent claim.”). As another example of claim language that treats “distance magnitude” as being different from “length magnitude,” dependent claim 365 recites a method where “the magnitude includes a distance or length magnitude.”³ ’754 Patent col. 134 l. 13.

In its responsive claim construction brief, Apple contends that the word “length” has a different meaning than the term “length magnitude.” (*See* ECF No. 170 at 8.) But Apple fails to provide an adequate explanation of how that is true. (*See id.* (“[T]he latter implies a scalar value with no directional information.”).)

³ Also, in general, although the word “distance” can mean the “length” or “full length” of something, *see* MERRIAM-WEBSTER DICTIONARY, <https://www.merriam-webster.com/dictionary/distance> (providing “length of a race or contest” as a listed definition for the word “distance”), it can also mean the “the amount of space between two places.” CAMBRIDGE DICTIONARY, <https://dictionary.cambridge.org/us/dictionary/english/distance> (“distance from something to something”).

1 Apple contends that the specification of the '754 Patent supports its proposed
2 construction. (*See id.* at 8–9; *see also* ECF No. 163 at 18.) Apple points to the following
3 passage in the specification:

4 In the context of the present description, gesture magnitude refers to the
5 magnitude of the associated gesture dynamics. For example, in one
6 embodiment, the gesture magnitude of a swipe gesture may include the length
of the swipe and/or the contact pressure exerted during the swipe.

7 '754 Patent col. 61 ll. 1–5. But this passage is of no aid to Apple. The passage is discussing
8 the broader term “gesture magnitude,” not the specific term at issue “distance magnitude.”
9 Also, the passage merely uses permissive language in explaining that gesture magnitude
10 “may” include the length of the swipe. It does not state that gesture magnitude must
11 encompass length.

12 Apple also argues that the Court should adopt its proposed construction for the term
13 “distance magnitude” because the term “distance magnitude” should not be interpreted to
14 incorporate concepts such as velocity or acceleration. (*See* ECF No. 170 at 9.) Although
15 the Court is inclined to agree with Apple that the term “distance magnitude” does not
16 encompass velocity or acceleration, it does not then follow that the Court should adopt a
17 construction for the term “distance magnitude” that appears to be incorrect. In addition, it
18 does not appear that Smith Interface is even contending that the term “distance magnitude”
19 encompasses velocity or acceleration. In arguing for giving the claim term “distance
20 magnitude” its plain and ordinary, Smith Interface appears to contend that the plain and
21 ordinary meaning of the term is “amount[] of distance.” (*See* ECF No. 164 at 17.)
22 Therefore, Apple’s arguments concerning velocity and acceleration appear to be a straw
23 man, and there is no actual dispute regarding whether “distance magnitude” can encompass
24 velocity or acceleration.

25 In sum, the Court is inclined to reject Apple’s proposed construction for the claim
26 term “distance magnitude.” The Court is also inclined to decline to further construe the
27 term “distance magnitude” and give the claim term its plain and ordinary meaning, or to
28 construe the claim term “distance magnitude” as “amount of distance.”

1 **IV. “blur”/“blurred”/“blurring”**

2 Apple proposes that the claim terms “blur,” “blurred,” and “blurring” be given their
3 plain meaning, which Apple contends is “make or become unclear or less distinct / made
4 or became unclear or less distinct / making or becoming unclear or less distinct.” (*See* ECF
5 No. 163 at 20.) Smith Interface argues that the claim terms do not need to be construed
6 and instead the Court should give the claim terms their plain and ordinary meaning. (*See*
7 ECF No. 164 at 21.) Specifically, Smith Interface argues that the Court should not construe
8 this claim term because there appears to be no dispute between the Parties regarding the
9 scope of the term, and the term is common word that is easily understandable by a jury.
10 The Court is inclined to agree.

11 The word “blur” is a common word with the widely understood meaning of “to make
12 dim, indistinct, or vague in outline or character.” MERRIAM-WEBSTER DICTIONARY, [https://](https://www.merriam-webster.com/dictionary/blur)
13 www.merriam-webster.com/dictionary/blur; *see* CAMBRIDGE DICTIONARY, [https://](https://dictionary.cambridge.org/us/dictionary/english/blur)
14 dictionary.cambridge.org/us/dictionary/english/blur; (ECF No. 163-10 (Ex. 9); ECF No.
15 163-11 (Ex. 10)); *see also Phillips*, 415 F.3d at 1314. And a review of the specification
16 shows that the ’754 Patent uses the term “blur” consistent with this common and plain
17 meaning. *See, e.g.*, ’754 Patent col. 71 ll. 4–9 (“As an option, 3D depth cues may be used
18 to indicate ‘moving’ through the display layers as the contact pressure is changed (i.e.
19 magnifying and fading display layers as they are passed by, sharpening previously blurry
20 display layers as they grow closer, etc.).”), fig 2 (depicting “blurring as a function of
21 pressure”), col. 132 ll. 39–43 (“[T]he blur includes obscuring a visibility of the at least one
22 other object; . . . the blur includes reducing a visibility of the at least one other object.”).

23 Both Parties agree that the term “blur” should be given its plain meaning. (*Compare*
24 ECF No. 163 at 20, *with* ECF No. 164 at 21.) And, in their claim construction briefing, the
25 parties do not present any dispute regarding the scope of the term “blur.” Apple is simply
26 requesting that the Court adopt an express construction that it contends aligns with the plain
27 meaning of the term “blur.” (*See* ECF No. 170 at 9–10.)

28 ///

1 But claim construction “is not an obligatory exercise in redundancy.” *U.S. Surgical*
2 *Corp. v. Ethicon, Inc.*, 103 F.3d 1554, 1568 (Fed. Cir. 1997). “[M]erely rephrasing or
3 paraphrasing the plain language of a claim by substituting synonyms does not represent
4 genuine claim construction.” *C.R. Bard, Inc. v. U.S. Surgical Corp.*, 388 F.3d 858, 863
5 (Fed. Cir. 2004). Instead, at claim construction, the Court’s duty is to resolve disputes
6 between the parties regarding the scope of the claim terms. *See Eon Corp.*, 815 F.3d at
7 1318; *O2 Micro*, 521 F.3d at 1362. If there is no dispute between the parties regarding the
8 scope of a certain claim term, then the Court need not construe that term. *See Eon*, 815
9 F.3d at 1318–19 (“[O]nly those terms need be construed that are in controversy, and only
10 to the extent necessary to resolve the controversy.” (quoting *Vivid Techs., Inc. v. Am. Sci.*
11 *& Eng’g, Inc.*, 200 F.3d 795, 803, (Fed. Cir. 1999))); *see also O2 Micro*, 521 F.3d at 1362
12 (“[D]istrict courts are not (and should not be) required to construe *every* limitation present
13 in a patent’s asserted claims.”). Because both Parties agree that the term “blur” should be
14 given its plain meaning and do not identify any concrete dispute regarding the scope of this
15 claim term, the term need not be construed. Accordingly, the Court is inclined to decline
16 to construe the claim terms “blur,” “blurred,” and “blurring” and to give the claim terms
17 their plain and ordinary meaning.

18 CONCLUSION

19 For the reasons set forth above, the Court is inclined to adopt the above claim
20 constructions.

21 **IT IS SO ORDERED.**

22 Dated: September 23, 2025

23 

24 Honorable Todd W. Robinson
25 United States District Judge
26
27
28
