Pakage Apparel EX2001
Page 963 of 1677
IPR2024-01163

Either Anticipation by U.S. Patent Publication No. 2004/0025218 (Published Feb. 12, 2004) or Obviousness In View of Andrew Christian Style No. 9132 (Show-It Brief) and 9133 (Show-It Boxer) and EP O 476 818 or the '369 Patent

The disclosure of U.S. Patent Publication No. 2004/0025218 (published Feb. 12, 2004) ("'218 Publication") either expressly, implicitly, or inherently anticipates the asserted claims of U.S. Patent No. 9,687,030 under 35 U.S.C. § 102 and/or renders those claims obvious under 35 U.S.C. § 103 in view of the Andrew Christian Products in Style No. 9132 (Show-It Brief) ("9132 Show-It Brief") and Style No. 9133 (Show-It Boxer) ("9133 Show-It Boxer") (on sale at least as early as March 6, 2009), and/or European Patent Application No. EP 0 476 818 A1 (Published March 25, 1992) ("EP O 476 818") and/or U.S. Patent No. 7,631,369 (issued Dec. 15, 2009) (the "'369 Patent"), as set forth in the chart below.

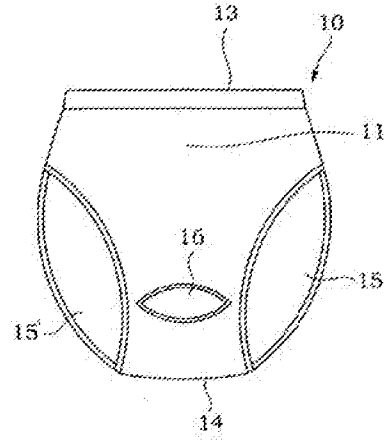

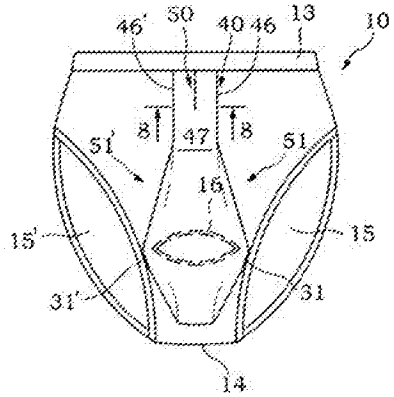

The obviousness combinations asserted and disclosed in this chart are as follows:

- '218 Publication in view of 9132 Show-It Brief/9133 Show-It Boxer (all asserted claims)
- '218 Publication in view of 9132 Show-It Brief/9133 Show-It Boxer in further view of EP O 476 818 (all asserted claims)
- '218 Publication in view of 9132 Show-It Brief/9133 Show-It Boxer in further view of the '369 Patent (claim 2)

One of ordinary skill in the art of the Asserted Patents would understand to combine these references as they relate to men's underwear. The 9132 Show-It Brief and the 9133 Show-It Boxer are men's underwear; the '218 Publication discloses a "men's undergarment;" and the '369 Patent discloses "performance underwear" for men.

Claim 1	Exemplary Disclosure in Prior Art

Claim 1	Exemplary Disclosure in Prior Art
[1.3c] having a top edge attached to the body at the waistband seam, a bottom edge attached at the first seam, side edges attached to the body at side seams extending substantially continuously along either side of the front portion from the first seam to the waistband seam and	**The '218 Publication discloses a stretch panel having a top edge attached to the body at the waistband seam, a bottom edge attached to the body at the first seam, side edges attached to the body at side seams extending substantially continuously along either side of the front portion from the first seam to the waistband seam. *See*,** In particular, the '218 Publication discloses that the cover panel (the front portion) attaches to the undergarment body, above at the waistband seam, below at a seam at the crotch (first seam), and seams on the sides via side flaps (side seams), which collectively define a space of the undergarment body with an opening for the wearer's penis and scrotum (the stretch panel) inside of the front portion. The '218 Publication thereby discloses that the stretch panel is attached at the waistband seam, first seam, and along side seams extending substantially continuously both sides of the front portion. "[0009] The cover panel has top and bottom ends respectively fixedly fastened to the waistband and the crotch . . . ." "[0022] FIGS. 2-5 show the first embodiment of the present invention. As illustrated, the cover panel 20 is an elongated piece of cloth, having a bottom center pleat 22 longitudinally upwardly extended from the bottom end thereof and two smoothly arched side flaps 21 and 21' symmetrically formed integral with two opposite lateral sides thereof near the bottom end. When fastened to the undergarment body 10, the upper part of the cover panel 20 defines with the undergarment body 10 a penis receiving space 23 above the opening 16 (see also FIG. 1) for receiving the user's penis, and the side flaps 21 and 21' define with the undergarment body 10a scrotum receiving space 24 below the opening 16 for receiving the user's scrotum. Further, because of the effect of the bottom center pleat 22, the lower part of the cover panel 20 protrudes forwards from the undergarment body 10, forming a three-dimensional status. Further, the border areas of the side flaps 21 and 21' are respectively stitched to the undergarment body 10, forming stitched lines 31 and 31' that hold the cover panel 20 in the center position against biasing." "[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen." "[0025] Referring to FIGS. 4 and 5, when the undergarment of the first embodiment of the present invention put on the user's body, the user's penis and scrotum are extended out of the undergarment body 10 through the opening 16, keeping the scrotum received in the scrotum receiving space 24 and the penis received in the penis receiving space 23. When the user adjusted the undergarment to the

Claim 1	Exemplary Disclosure in Prior Art
	best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23." "[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40." "The men's undergarment as claimed in claim 1, wherein said cover panel has an upper part, which defines with said undergarment body said penis receiving space, and two smoothly arched side flaps symmetrically bilaterally formed integral with a lower part thereof and defining with said undergarment body said scrotum receiving space." (Claim 4) "The men's undergarment as claimed in claim 5, wherein the outer portion of each of said arched side flap is respectively stitched to said undergarment body, forming a respective stitched line." (Claim 6)  Fig.3

On information and belief, the 9133 Show-It Boxer utilized the same "Show-It Technology 2.0" utilized in the 9132 Show-It Brief, and an inside view of the 9133 Show-It Boxer would show a "inner cup" (that is, a Stretch Panel) with the same horseshoe shaped opening as shown above in ACI000040 at 00:14. *See* Show-It 2009 Line Sheet at ACI000092, depicting both the 9132 Show-It Brief and the 9133 Show-It Boxer and describing "Show-It™ with Show-It Technology 2.0" with "our comfy cup." To the extent Plaintiffs contend the '218 Publication does not expressly, implicitly, or inherently disclose an opening for receiving a wearer's genitals, the opening having a rounded bottom edge and opposing side edges that are spaced apart from one another on either side of the opening, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, understand how to modify '218 Publication to meet this limitation. Alternatively, one of ordinary skill could modify the '218 Publication in view of the 9132 Show-It Brief/9133 Show-It Boxer (disclosure above) to meet this limitation.
[1.4a] the stretch panel being resiliently	**The '218 Publication discloses a stretch panel being resiliently elastic both in a direction between the top edge and the bottom edge and in a direction between the side edges. *See,***

Pakage Apparel EX2001
Page 1012 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
elastic both in a direction between the top edge and the bottom edge and in a direction between the side edges,	In particular, the '218 Publication discloses the stretch panel, as discussed in 1.3, above. The only material disclosed by the '218 Publication is an elastically resilient four-way stretch material), as discussed in 1.3, above, which would be resiliently elastic both in a direction between the top edge and the bottom edge and in a direction between the side edges. "[0021] . . . The cover panel is made of a piece of elastic, ventilating cloth (cotton cloth or spandex- contained meshed cloth), having top and bottom ends respectively fixedly fastened to the waistband 13 and the crotch 14." A "spandex-contained meshed cloth" is a fabric capable of stretching in each of two different directions with substantial elastic recovery toward its pre-stretching size and shape. "[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen." "[0025] . . . When the user adjusted the undergarment to the best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23. At the same time, the cover panel 20 supports the scrotum in the scrotum receiving space 24." "[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40. Because the three-dimensional profile of the cover panel 40 is shaped like a water drop, the cover panel 40 effectively covers and supports the user's scrotum." *See also* [0022], [0023], [0026], [0028].

Claim 1	Exemplary Disclosure in Prior Art
[1.4b] the stretch panel having a length when unstretched smaller than a length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams	**The '218 Publication discloses a stretch panel having a length when unstretched smaller than a length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams. *See*,** In particular, because the cover panel (front portion) is attached on the outside of the stretch panel, as described in 1.3, above, and because the front portion contains a center pleat to form a three-dimensional status, the length and width of the stretch panel has a length when unstretched smaller than the length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams. The creases found in an alternative embodiment's front portion (cover panel 40) further disclose this limitation. "[0021] . . . The cover panel is made of a piece of elastic, ventilating cloth (cotton cloth or spandex- contained meshed cloth), having top and bottom ends respectively fixedly fastened to the waistband 13 and the crotch 14." "[0022] When fastened to the undergarment body 10, the upper part of the cover panel 20 defines with the undergarment body 10 a penis receiving space 23 above the opening 16 (see also FIG. 1) for receiving the user's penis, and the side flaps 21 and 21' define with the undergarment body 10a scrotum receiving space 24 below the opening 16 for receiving the user's scrotum. Further, because of the effect of the bottom center pleat 22, the lower part of the cover panel 20 protrudes forwards from the undergarment body 10, forming a three-dimensional status." "[0023] FIGS. 6-11 show a men's undergarment according to the second embodiment of the present invention. According to this alternate form, the cover panel 40 has a longitudinal center axis 45, two first creases 46 and 46' bilaterally equally spaced from the longitudinal center axis 45 at distance L1;L2 (L1=L2) and arranged in parallel, and two second creases 48 and 48' bilaterally equally spaced from the first creases 46 and 46' at distance L3;L4 (L3=L4) and arranged in parallel. The longitudinally extended middle part of the cover panel 40 forms a front cover portion 47 between the first creases 46 and 46'. The part of the cover panel 40 between the first creases 46 and 46' and the second creases 48 and 48' forms two parallel side cover portions 49 and 49'. The part of the cover panel 40 beyond the second creases 48 and 48' forms two back flap portions 42 and 42'. The two side cover portions 49 and 49' are folded backwards along the first creases 46 and 46' and received at the back side of the front cover portion 47, and then the back flap portions 42 and 42' are folded forwards along the second creases 48 and 48' and received at the back sides of the side cover portions 49 and 49', and then the upper part of the second creases 48 and 48' are stitched together, forming a stitched line 50."

Pakage Apparel EX2001
Page 1020 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
	"[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen." "[0025] . . . When the user adjusted the undergarment to the best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23. At the same time, the cover panel 20 supports the scrotum in the scrotum receiving space 24." "[0026] Further, the side cover portions 49 and 49' and back flap portions 42 and 42' of the cover panel 40 are gradually downwardly extended from the stitched line 50 toward two opposite lateral sides, showing a three-dimensional profile shaped like a water drop." "[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40. Because the three-dimensional profile of the cover panel 40 is shaped like a water drop, the cover panel 40 effectively covers and supports the user's scrotum." "[0028] The length of the stitched line 50 helps define the variation of the width of the cover panel 40, i.e., the water drop-like three-dimensional becomes relatively shorter when the stitched line 50 relatively prolonged, or relatively longer when the stitched line 50 relatively shortened. The length of the stitched line 50 is determined subject to the size and style of the undergarment. Basically, the water drop-like three-dimensional profile of the cover panel 40 fits the genitals of a matured man."

Claim 1	Exemplary Disclosure in Prior Art
dimensional pouch between the stretch panel and the front portion for receiving the wearer's genitals and holding the wearer's genitals while the garment is being worn.	"[0022] When fastened to the undergarment body 10, the upper part of the cover panel 20 defines with the undergarment body 10 a penis receiving space 23 above the opening 16 (see also FIG. 1) for receiving the user's penis, and the side flaps 21 and 21' define with the undergarment body 10a scrotum receiving space 24 below the opening 16 for receiving the user's scrotum. Further, because of the effect of the bottom center pleat 22, the lower part of the cover panel 20 protrudes forwards from the undergarment body 10, forming a three-dimensional status." "[0023] FIGS. 6-11 show a men's undergarment according to the second embodiment of the present invention. According to this alternate form, the cover panel 40 has a longitudinal center axis 45, two first creases 46 and 46' bilaterally equally spaced from the longitudinal center axis 45 at distance L1:L2 (L1=L2) and arranged in parallel, and two second creases 48 and 48' bilaterally equally spaced from the first creases 46 and 46' at distance L3:L4 (L3=L4) and arranged in parallel. The longitudinally extended middle part of the cover panel 40 forms a front cover portion 47 between the first creases 46 and 46'. The part of the cover panel 40 between the first creases 46 and 46' and the second creases 48 and 48' forms two parallel side cover portions 49 and 49'. The part of the cover panel 40 beyond the second creases 48 and 48' forms two back flap portions 42 and 42'. The two side cover portions 49 and 49' are folded backwards along the first creases 46 and 46' and received at the back side of the front cover portion 47, and then the back flap portions 42 and 42' are folded forwards along the second creases 48 and 48' and received at the back sides of the side cover portions 49 and 49', and then the upper part of the second creases 48 and 48' are stitched together, forming a stitched line 50." "[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen." "[0025] . . . When the user adjusted the undergarment to the best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23. At the same time, the cover panel 20 supports the scrotum in the scrotum receiving space 24." "[0026] Further, the side cover portions 49 and 49' and back flap portions 42 and 42' of the cover panel 40 are gradually downwardly extended from the stitched line 50 toward two opposite lateral sides, showing a three-dimensional profile shaped like a water drop."

Pakage Apparel EX2001
Page 1029 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
	"[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40. Because the three-dimensional profile of the cover panel 40 is shaped like a water drop, the cover panel 40 effectively covers and supports the user's scrotum." "[0028] The length of the stitched line 50 helps define the variation of the width of the cover panel 40, i.e., the water drop-like three-dimensional becomes relatively shorter when the stitched line 50 relatively prolonged, or relatively longer when the stitched line 50 relatively shortened. The length of the stitched line 50 is determined subject to the size and style of the undergarment. Basically, the water drop-like three-dimensional profile of the cover panel 40 fits the genitals of a matured man."  Fig.3

Claim 2	Exemplary Disclosure in Prior Art
	in the art would, based on one's knowledge and the 9132 Show-It Brief, understand how to modify the 9132 Show-It Brief to meet this limitation. **The 9133 Show-It Boxer is a garment wherein the stretch panel has a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband.** ***See,*** The 9133 Show-It Boxer's "stretch panel" comprises [redacted] a material that is capable of stretching more easily in a first direction than a second direction at right angles to the first direction. February 5, 2009 Pattern Sheets at ACI000151. The "inner cup" of the 9133 Show-It Boxer (the Stretch Panel) "lifts and presents" the male genitalia, which indicates that the "inner cup" (the Stretch Panel) will stretch less easily in a direct at right angles to the waistband (i.e., up and down) – to "lift" up it needs to stretch relatively less in the "up" direction. "Show-It Technology 2.0 features a hidden "comfy cup" that gently lifts and presents the package to the front. The horseshoe shaped inner cup [the Stretch Panel] is lined by soft elastic that gently aids in the lifting…" March 2009 Press Release. *See also* March 6, 2009 Blog Entry and March 11, 2009 Blog Entry for the same description. To the extent Plaintiffs contend the 9133 Show-It Boxer does not expressly, implicitly, or inherently disclose a garment wherein the stretch panel has asymmetrical stretch characteristics such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband, one of ordinary skill in the art would, based on one's knowledge and the 9133 Show-It Boxer, understand how to modify the 9133 Show-It Boxer to meet this limitation. **The '369 Patent discloses a fabric with a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction such that it stretches more easily in one direction and less easily in a direction at right angles to the first direction.**

Pakage Apparel EX2001
Page 1045 of 1677
IPR2024-01163

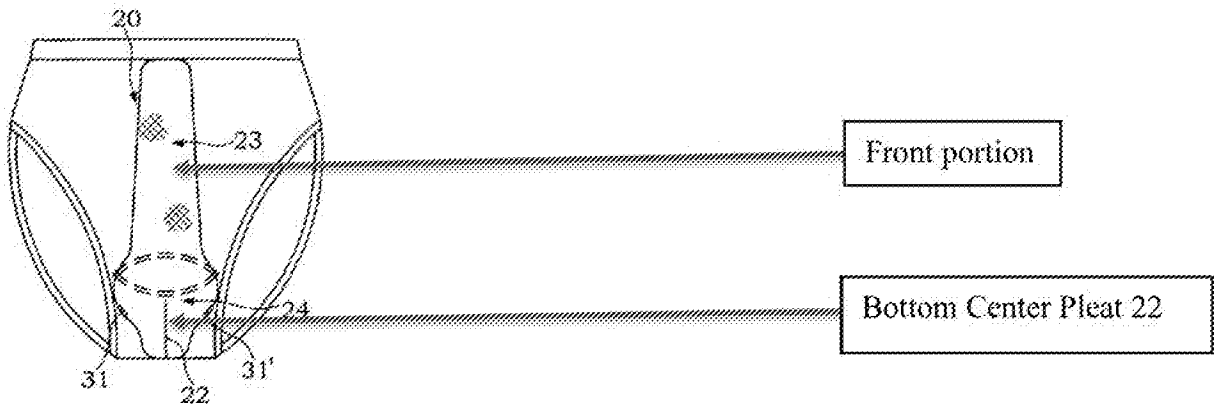

Claim 2	Exemplary Disclosure in Prior Art
	In particular, the '369 Patent discloses a warp knit, which has asymmetrical stretch characteristics. *See*, "With reference to FIG. 3, the warp knit is generally known in the art for having strands 26 running substantially parallel along a direction 27 of the fabric. Lateral threads 28 running substantially perpendicular to the strands 26 and in a direction 29 encircle sets of two strands 26 at once. Each adjacent lateral thread 28 encircles one of the two strands 26 in the first set and one of the two strands 26 from the second set. This pattern is repeated throughout. The warp knit, by virtue of having parallel strands 26 along the direction 27 of the fabric, is resistant to stretch in the direction 27 when compared to other knitted fabrics, which may undesirably stretch. Thus, the warp knit fabric stretches less along the direction 27 than along the direction 29." (2:40-52) "The warp knit fabric used to form the groin portion 14 can stretch a relatively greater amount in the horizontal direction, roughly parallel to the waistband, than in the vertical direction. The ability to stretch in the horizontal direction allows for the accommodation of different sizes and shapes of male genitals. The groin portion stretches in the horizontal direction to accommodate the genitals of the supporter user while maintaining slight pressure on the genitals in the horizontal direction, thus aiding the cupping and compression functions of the supporter 10." (3:1-10)

Pakage Apparel EX2001
Page 1046 of 1677
IPR2024-01163

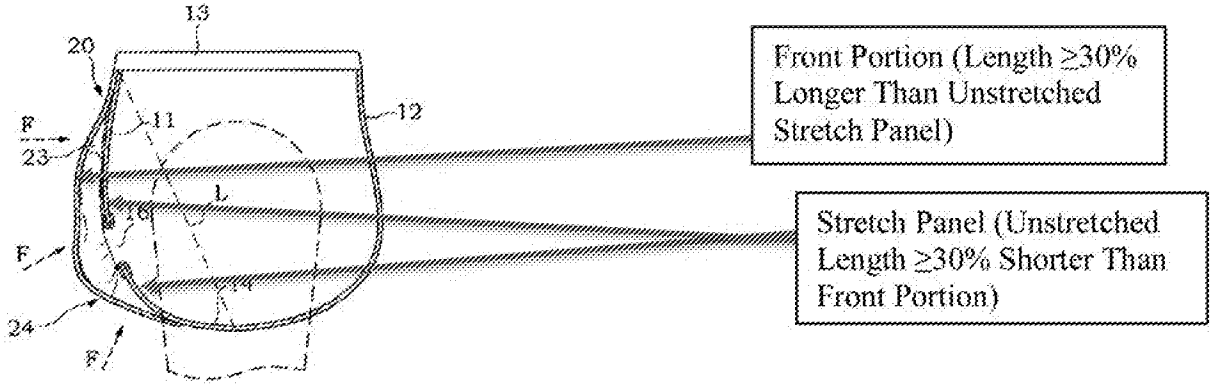

Claim 2	Exemplary Disclosure in Prior Art
	 Direction 27 is at a right angle to Direction 29 (and vice versa). The "warp knit" (the fabric) stretches more easily in the horizontal direction, that is, Direction 29 (roughly parallel to the waistband), than in the vertical direction, that is, Direction 27 (roughly at a right angle to the waistband)

Claim 5	Exemplary Disclosure in Prior Art
[5] A garment according to claim 1 wherein the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%.	The obviousness combinations asserted and disclosed in this chart for claim 5 are as follows: • '218 Publication in view of 9132 Show-It Brief/9133 Show-It Boxer • '218 Publication in view of 9132 Show-It Brief/9133 Show-It Boxer in further view of EP O 476 818 See above regarding claim 1. **The '218 Publication discloses the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%.** ***See,***

IPR2024-01163

Either Anticipation by U.S. Patent Publication No. 2004/0025218 (Published Feb. 12, 2004) or Obviousness In View of Andrew Christian Printed Publications and EP O 476 818 or the '369 Patent

The disclosure of U.S. Patent Publication No. 2004/0025218 (published Feb. 12, 2004) ("'218 Publication") either expressly, implicitly, or inherently anticipates the asserted claims of U.S. Patent No. 9,687,030 under 35 U.S.C. § 102 and/or renders those claims obvious under 35 U.S.C. § 103 in view of printed publications disclosing Andrew Christian Products ("Andrew Christian printed publications") (*see* Exhibit I-1 and I-2) in Style No. 9132 (Show-It Brief) ("9132 Show-It Brief") and Style No. 9133 (Show-It Boxer) ("9133 Show-It Boxer"), and/or European Patent Application No. EP 0 476 818 A1 (Published March 25, 1992) ("EP O 476 818") and/or U.S. Patent No. 7,631,369 (issued Dec. 15, 2009) (the "'369 Patent"), as set forth in the chart below.

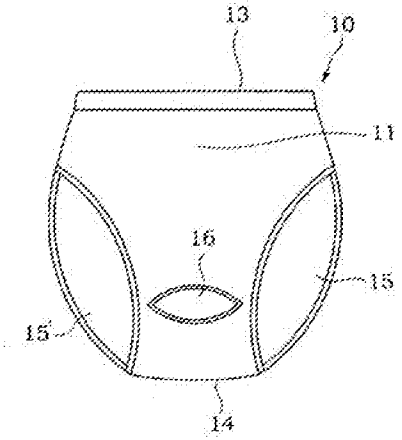

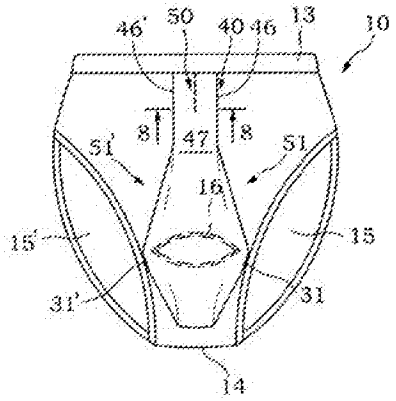

The Andrew Christian printed publications are: ACI000091-ACI000092 ("Show-It 2009 Line Sheet"); AC000093-AC000101 ("Show-It 2009-2010 Catalog"); ACI000038 (the "ACI000038 publication" or "ACI000038"); ACI000040 (the "ACI000040 publication" or "ACI000040"). One of ordinary skill in the art of the Asserted Patents would understand to combine these four printed publications, as all four discuss and describe the same Andrew Christian products, the 9132 Show-It Brief and the 9133 Show-It Boxer. The '218 Publication also discloses a "men's undergarment" and the '369 Patent discloses "performance underwear" for men.

The obviousness combinations asserted and disclosed in this chart are as follows:

- '218 Publication in view of Andrew Christian printed publications (all asserted claims)
- '218 Publication in view of Andrew Christian printed publications in further view of EP O 476 818 (all asserted claims)
- '218 Publication in view of Andrew Christian printed publications in further view of the '369 Patent (claim 2)

Claim 1	Exemplary Disclosure in Prior Art

ACI000040 at 00:20.

The "comfy cup" (the Stretch Panel) returns to its original shape (that is, it has "substantial elastic recovery toward its pre-stretching size and shape" and is therefore elastically resilient), once Andrew Christian removes his hand:

ACI000040 at 00.23.

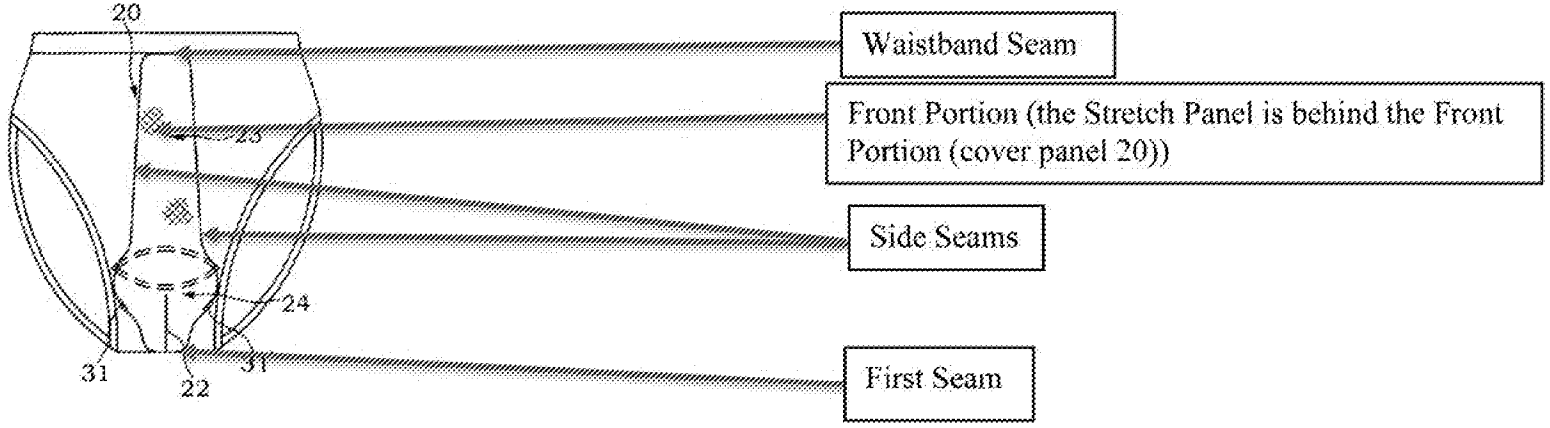

Pakage Apparel EX2001
Page 1113 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
	The Show-It 2009 Line Sheet at ACI000092 discloses that the 9132 Show-It Brief's "Comfy Cup cradles and lifts." On information and belief, to cradle and provide lift, the "comfy cup" (Stretch Panel) must be comprised of an elastically resilient four-way stretch material. To the extent Plaintiffs contend the ACI000040 publication or the Show-It 2009 Line Sheet does not expressly, implicitly, or inherently disclose that the 9132 Show-It Brief includes a stretch panel comprising elastically resilient four-way stretch material, one of ordinary skill in the art would, based on one's knowledge and the disclosure from the ACI000040 publication or the Show-It 2009 Line Sheet, understand how to modify the 9132 Show-It Brief to meet this limitation. **The 9133 Show-It Boxer includes a stretch panel comprising a sheet of elastically resilient four-way stretch material.** ***See,*** The Show-It 2009 Line Sheet at ACI000092 discloses that the 9133 Show-It Boxer utilizes the same "Show-It Technology 2.0" utilized in the 9132 Show-It Brief. *See* Show-It 2009 Line Sheet at ACI000092, depicting both the 9132 Show-It Brief and the 9133 Show-It Boxer and describing "Show-It™ with Show-It Technology 2.0" with "our comfy cup." On information and belief, an inside view of the 9133 Show-It Boxer would show a "comfy cup" (that is, a Stretch Panel) inside the Front Portion as shown above in ACI000040 at 00:20 and 00:23 and the Stretch Panel would have the same elastically resilient four way stretch material. The Show-It 2009 Line Sheet at ACI000092 discloses that the 9133 Show-It Boxer's "Comfy Cup cradles and lifts." On information and belief, to cradle and provide lift, the "comfy cup" (Stretch Panel) must be comprised of an elastically resilient four-way stretch material. To the extent Plaintiffs contend the ACI000040 publication the Show-It 2009 Line Sheet does not expressly, implicitly, or inherently disclose that the 9133 Show-It Boxer includes a stretch panel comprising elastically resilient four-way stretch material, one of ordinary skill in the art would, based on one's knowledge and the disclosure from the ACI000040 publication or the Show-It 2009 Line Sheet, understand how to modify the 9133 Show-It Boxer to meet this limitation. To the extent Plaintiffs contend the '218 Publication does not expressly, implicitly, or inherently disclose a stretch panel comprising a sheet of elastically resilient four-way stretch material, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, understand how to modify the disclosure of the '218 Publication to meet this limitation.

Pakage Apparel EX2001
Page 1114 of 1677

Claim 1	Exemplary Disclosure in Prior Art
	Alternatively, one of ordinary skill could modify the '218 Publication in view of the ACI000040 publication and/or the Show-It 2009 Line Sheet (disclosure above) to meet this limitation.
[1.3c] having a top edge attached to the body at the waistband seam, a bottom edge attached at the first seam, side edges attached to the body at side seams extending substantially continuously along either side of the front portion from the first seam to the waistband seam and	**The '218 Publication discloses a stretch panel having a top edge attached to the body at the waistband seam, a bottom edge attached to the body at the first seam, side edges attached to the body at side seams extending substantially continuously along either side of the front portion from the first seam to the waistband seam.** ***See,*** In particular, the '218 Publication discloses that the cover panel (the front portion) attaches to the undergarment body, above at the waistband seam, below at a seam at the crotch (first seam), and seams on the sides via side flaps (side seams), which collectively define a space of the undergarment body with an opening for the wearer's penis and scrotum (the stretch panel) inside of the front portion. The '218 Publication thereby discloses that the stretch panel is attached at the waistband seam, first seam, and along side seams extending substantially continuously both sides of the front portion. "[0009] The cover panel has top and bottom ends respectively fixedly fastened to the waistband and the crotch . . . ." "[0022] FIGS. 2-5 show the first embodiment of the present invention. As illustrated, the cover panel 20 is an elongated piece of cloth, having a bottom center pleat 22 longitudinally upwardly extended from the bottom end thereof and two smoothly arched side flaps 21 and 21' symmetrically formed integral with two opposite lateral sides thereof near the bottom end. When fastened to the undergarment body 10, the upper part of the cover panel 20 defines with the undergarment body 10 a penis receiving space 23 above the opening 16 (see also FIG. 1) for receiving the user's penis, and the side flaps 21 and 21' define with the undergarment body 10a scrotum receiving space 24 below the opening 16 for receiving the user's scrotum. Further, because of the effect of the bottom center pleat 22, the lower part of the cover panel 20 protrudes forwards from the undergarment body 10, forming a three-dimensional status. Further, the border areas of the side flaps 21 and 21' are respectively stitched to the undergarment body 10, forming stitched lines 31 and 31' that hold the cover panel 20 in the center position against biasing." "[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen."

Pakage Apparel EX2001
Page 1115 of 1677
IPR2024-01163

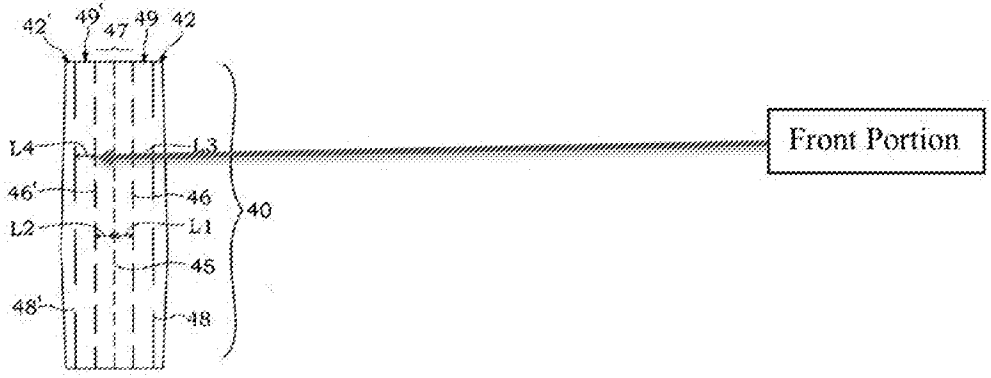

Claim 1	Exemplary Disclosure in Prior Art
	"[0025] Referring to FIGS. 4 and 5, when the undergarment of the first embodiment of the present invention put on the user's body, the user's penis and scrotum are extended out of the undergarment body 10 through the opening 16, keeping the scrotum received in the scrotum receiving space 24 and the penis received in the penis receiving space 23. When the user adjusted the undergarment to the best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23." "[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40." "The men's undergarment as claimed in claim 1, wherein said cover panel has an upper part, which defines with said undergarment body said penis receiving space, and two smoothly arched side flaps symmetrically bilaterally formed integral with a lower part thereof and defining with said undergarment body said scrotum receiving space." (Claim 4) "The men's undergarment as claimed in claim 5, wherein the outer portion of each of said arched side flap is respectively stitched to said undergarment body, forming a respective stitched line." Either Anticipation by U.S. Patent Publication No. 2004/0025218 (Published Feb. 12, 2004) or Obviousness In View of Andrew Christian Printed Publications and EP O 476 818 or the '369 Patent

Claim 1	Exemplary Disclosure in Prior Art
	The "stretch panel" of the 9133 Show-It Boxer includes an opening for receiving a wearer's genitals, the opening having a rounded bottom edge and opposing side edges that are spaced apart from one another on either side of the opening. ***See,*** The Show-It 2009 Line Sheet at ACI000092 discloses that the 9133 Show-It Boxer utilizes the same "Show-It Technology 2.0" utilized in the 9132 Show-It Brief. *See* Show-It 2009 Line Sheet at ACI000092, depicting both the 9132 Show-It Brief and the 9133 Show-It Boxer and describing "Show-It™ with Show-It Technology 2.0" with "our comfy cup." On information and belief, and an inside view of the 9133 Show-It Boxer would show a "comfy cup" (that is, a Stretch Panel) with the same opening having a rounded bottom edge and opposing side edges that are spaced apart from one another on either side of the opening as shown above in ACI000040 at 00:14. To the extent Plaintiffs contend the '218 Publication does not expressly, implicitly, or inherently disclose an opening for receiving a wearer's genitals, the opening having a rounded bottom edge and opposing side edges that are spaced apart from one another on either side of the opening, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, understand how to modify '218 Publication to meet this limitation. Alternatively, one of ordinary skill could modify the '218 Publication in view of the Show-It 2009-2010 Catalog, the ACI000040 publication, and/or the Show-It 2009 Line Sheet (disclosure above) to meet this limitation.
[1.4a] the stretch panel being resiliently elastic both in a direction between the top edge and the bottom edge and in a direction	**The '218 Publication discloses a stretch panel being resiliently elastic both in a direction between the top edge and the bottom edge and in a direction between the side edges.** ***See,*** In particular, the '218 Publication discloses the stretch panel, as discussed in 1.3, above. The only material disclosed by the '218 Publication is an elastically resilient four-way stretch material), as discussed in 1.3, above, which would be resiliently elastic both in a direction between the top edge and the bottom edge and in a direction between the side edges. "[0021] . . . The cover panel is made of a piece of elastic, ventilating cloth (cotton cloth or spandex- contained meshed cloth), having top and bottom ends respectively fixedly fastened to the waistband 13 and the crotch 14." A "spandex-contained meshed cloth" is a fabric capable of stretching in each of two different directions with substantial elastic recovery toward its pre-stretching size and shape.

Pakage Apparel EX2001
Page 1128 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
between the side edges,	"[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen." "[0025] . . . When the user adjusted the undergarment to the best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23. At the same time, the cover panel 20 supports the scrotum in the scrotum receiving space 24." "[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40. Because the three-dimensional profile of the cover panel 40 is shaped like a water drop, the cover panel 40 effectively covers and supports the user's scrotum." *See also* [0022], [0023], [0026], [0028]. IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
	direction between the top edge and the bottom edge and in a direction between the side edges, one of ordinary skill in the art would, based on one's knowledge and the 9133 Show-It Boxer, understand how to modify the 9133 Show-It Boxer to meet this limitation. To the extent Plaintiffs contend the '218 Publication does not expressly, implicitly, or inherently disclose the stretch panel being resiliently elastic both in a direction between the top edge and the bottom edge and in a direction between the side edges, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, would understand how to modify '218 Publication to meet this limitation. Alternatively, one of ordinary skill could modify the '218 Publication in view of the ACI000040 publication and/or the Show-It 2009 Line Sheet (disclosure above) to meet this limitation.
[1.4b] the stretch panel having a length when unstretched smaller than a length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured	**The '218 Publication discloses a stretch panel having a length when unstretched smaller than a length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams.** ***See,*** In particular, because the cover panel (front portion) is attached on the outside of the stretch panel, as described in 1.3, above, and because the front portion contains a center pleat to form a three-dimensional status, the length and width of the stretch panel has a length when unstretched smaller than the length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams. The creases found in an alternative embodiment's front portion (cover panel 40) further disclose this limitation. "[0021] . . . The cover panel is made of a piece of elastic, ventilating cloth (cotton cloth or spandex- contained meshed cloth), having top and bottom ends respectively fixedly fastened to the waistband 13 and the crotch 14." "[0022] When fastened to the undergarment body 10, the upper part of the cover panel 20 defines with the undergarment body 10 a penis receiving space 23 above the opening 16 (see also FIG. 1) for receiving the user's penis, and the side flaps 21 and 21' define with the undergarment body 10a scrotum receiving space 24 below the opening 16 for receiving the user's scrotum. Further, because of the effect of the bottom center pleat 22, the lower part of the cover panel 20 protrudes forwards from the undergarment body 10, forming a three-dimensional status."

Pakage Apparel EX2001
Page 1136 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
along the front portion between the side seams	"[0023] FIGS. 6-11 show a men's undergarment according to the second embodiment of the present invention. According to this alternate form, the cover panel 40 has a longitudinal center axis 45, two first creases 46 and 46' bilaterally equally spaced from the longitudinal center axis 45 at distance L1;L2 (L1=L2) and arranged in parallel, and two second creases 48 and 48' bilaterally equally spaced from the first creases 46 and 46' at distance L3;L4 (L3=L4) and arranged in parallel. The longitudinally extended middle part of the cover panel 40 forms a front cover portion 47 between the first creases 46 and 46'. The part of the cover panel 40 between the first creases 46 and 46' and the second creases 48 and 48' forms two parallel side cover portions 49 and 49'. The part of the cover panel 40 beyond the second creases 48 and 48' forms two back flap portions 42 and 42'. The two side cover portions 49 and 49' are folded backwards along the first creases 46 and 46' and received at the back side of the front cover portion 47, and then the back flap portions 42 and 42' are folded forwards along the second creases 48 and 48' and received at the back sides of the side cover portions 49 and 49', and then the upper part of the second creases 48 and 48' are stitched together, forming a stitched line 50." "[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen." "[0025] . . . When the user adjusted the undergarment to the best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23. At the same time, the cover panel 20 supports the scrotum in the scrotum receiving space 24." "[0026] Further, the side cover portions 49 and 49' and back flap portions 42 and 42' of the cover panel 40 are gradually downwardly extended from the stitched line 50 toward two opposite lateral sides, showing a three-dimensional profile shaped like a water drop." "[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40. Because the three-dimensional profile of the cover panel 40 is shaped like a water drop, the cover panel 40 effectively covers and supports the user's scrotum." "[0028] The length of the stitched line 50 helps define the variation of the width of the cover panel 40, i.e., the water drop-like three-dimensional becomes relatively shorter when the stitched line 50 relatively prolonged, or relatively longer when the stitched line 50

Pakage Apparel EX2001
Page 1137 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art

relatively shortened. The length of the stitched line 50 is determined subject to the size and style of the undergarment. Basically, the water drop-like three-dimensional profile of the cover panel 40 fits the genitals of a matured man."

IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
	seams, as the "front portion" and "stretch panel" (the "comfy cup") of the 9133 Show-It Boxer are attached along the waistband seam, a bottom seam (the first seam), and the side seams extending from the waistband seam to the first seam. To the extent Plaintiffs contend the Show-It 2009 Line Sheet or the ACI000040 publication does not expressly, implicitly, or inherently disclose that the 9133 Show-It Boxer includes a stretch panel having a length when unstretched smaller than a length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams, one of ordinary skill in the art would, based on one's knowledge and the disclosure of the Show-It 2009 Line Sheet or the ACI000040 publication, understand how to modify 9133 Show-It Boxer to meet this limitation. To the extent Plaintiffs contend the '218 Publication does not expressly, implicitly, or inherently disclose a stretch panel having a length when unstretched smaller than a length measured along the front portion between the first seam and the waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, understand how to modify '218 Publication to meet this limitation. Alternatively, one of ordinary skill could modify the '218 Publication in view of the Show-It 2009-2010 Catalog, Show-It 2009 Line Sheet, and/or the ACI000040 publication (disclosure above) to meet this limitation.
[1.4c] such that the front portion is gathered from side-to-side and top-to-bottom by the stretch panel and defines a three-dimensional	**The front portion of the '218 Publication defines a three-dimensional pouch between the stretch panel and the front portion for receiving and holding the wearer's genitals. *See*,** In particular, the '218 Publication discloses a cover panel (the front portion) that creates a three-dimensional pouch with the stretch panel, as described in 1.3, above. The pouch ("a concave space") is comprised of the "penis receiving space 23 or 53" and the "scrotum receiving space 24 or 54." The pouch is for receiving the wearer's penis and scrotum (genitals). Furthermore, the front portion's center pleat further discloses this limitation, as do the creases in an alternative embodiment's front portion. "[0021] . . . The cover panel is made of a piece of elastic, ventilating cloth (cotton cloth or spandex- contained meshed cloth), having top and bottom ends respectively fixedly fastened to the waistband 13 and the crotch 14." "[0022] When fastened to the undergarment body 10, the upper part of the cover panel 20 defines with the undergarment body 10 a penis receiving space 23 above the opening 16 (see also FIG. 1) for receiving the user's penis, and the side flaps 21 and 21' define with

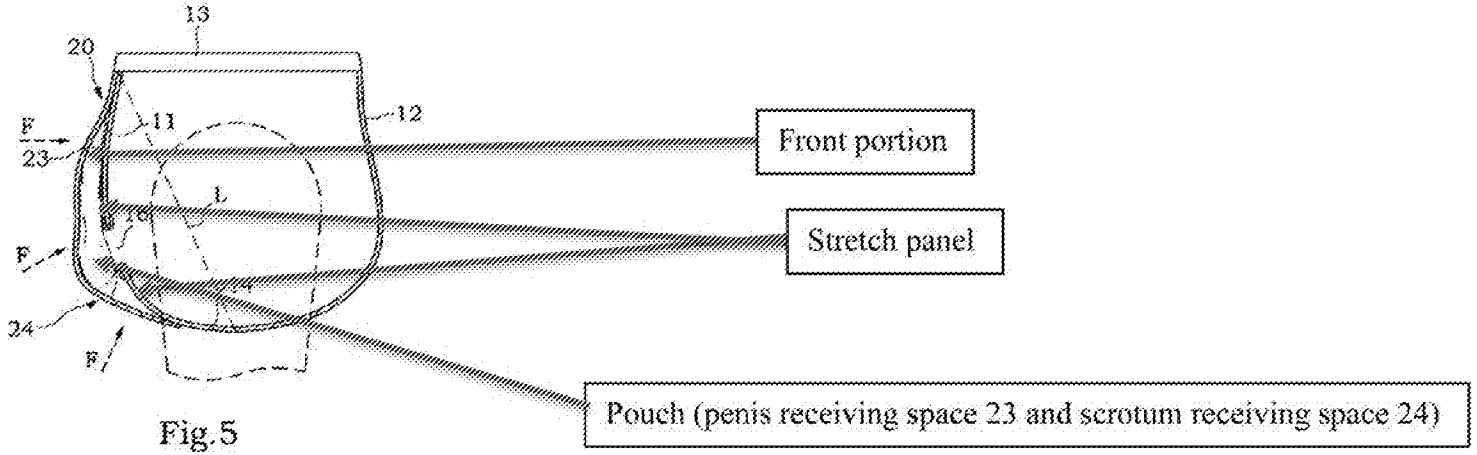

Pakage Apparel EX2001
Page 1143 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
pouch between the stretch panel and the front portion for receiving the wearer's genitals and holding the wearer's genitals while the garment is being worn.	the undergarment body 10a scrotum receiving space 24 below the opening 16 for receiving the user's scrotum. Further, because of the effect of the bottom center pleat 22, the lower part of the cover panel 20 protrudes forwards from the undergarment body 10, forming a three-dimensional status." "[0023] FIGS. 6-11 show a men's undergarment according to the second embodiment of the present invention. According to this alternate form, the cover panel 40 has a longitudinal center axis 45, two first creases 46 and 46' bilaterally equally spaced from the longitudinal center axis 45 at distance L1;L2 (L1=L2) and arranged in parallel, and two second creases 48 and 48' bilaterally equally spaced from the first creases 46 and 46' at distance L3;L4 (L3=L4) and arranged in parallel. The longitudinally extended middle part of the cover panel 40 forms a front cover portion 47 between the first creases 46 and 46'. The part of the cover panel 40 between the first creases 46 and 46' and the second creases 48 and 48' forms two parallel side cover portions 49 and 49'. The part of the cover panel 40 beyond the second creases 48 and 48' forms two back flap portions 42 and 42'. The two side cover portions 49 and 49' are folded backwards along the first creases 46 and 46' and received at the back side of the front cover portion 47, and then the back flap portions 42 and 42' are folded forwards along the second creases 48 and 48' and received at the back sides of the side cover portions 49 and 49', and then the upper part of the second creases 48 and 48' are stitched together, forming a stitched line 50." "[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen." "[0025] . . . When the user adjusted the undergarment to the best fit position, the cover panel 20 is forced by its elastic material property to cover the penis and to secure the penis to the inside of the penis receiving space 23. At the same time, the cover panel 20 supports the scrotum in the scrotum receiving space 24." "[0026] Further, the side cover portions 49 and 49' and back flap portions 42 and 42' of the cover panel 40 are gradually downwardly extended from the stitched line 50 toward two opposite lateral sides, showing a three-dimensional profile shaped like a water drop." "[0027] The elastic material property and the effect of the stitched line 50 cause the side cover portions 49 and 49' to hold the user's penis positively in the penis receiving space 53 in vertical, preventing the user's penis from falling to the outside of the cover panel 40. Because the three-dimensional profile of the cover panel 40 is shaped like a water drop, the cover panel 40 effectively covers and supports the user's scrotum."

IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art

AC000038 at 4:02.

To the extent Plaintiffs contend the Show-It 2009 Line Sheet, the Show-It 2009-2010 Catalog, the ACI000038 publication, or the ACI000040 publication does not expressly, implicitly, or inherently disclose that the front portion is gathered from side-to-side and top-to-bottom by the stretch panel and defines a three-dimensional pouch between the stretch panel and the front portion for receiving the wearer's genitals and holding the wearer's genitals while the garment is being worn, one of ordinary skill in the art would, based on one's knowledge and the disclosure in the Show-It 2009 Line Sheet, the Show-It 2009-2010 Catalog, the ACI000038 publication, or the ACI000040 publication, understand how to modify the 9132 Show-It Brief to meet this limitation.

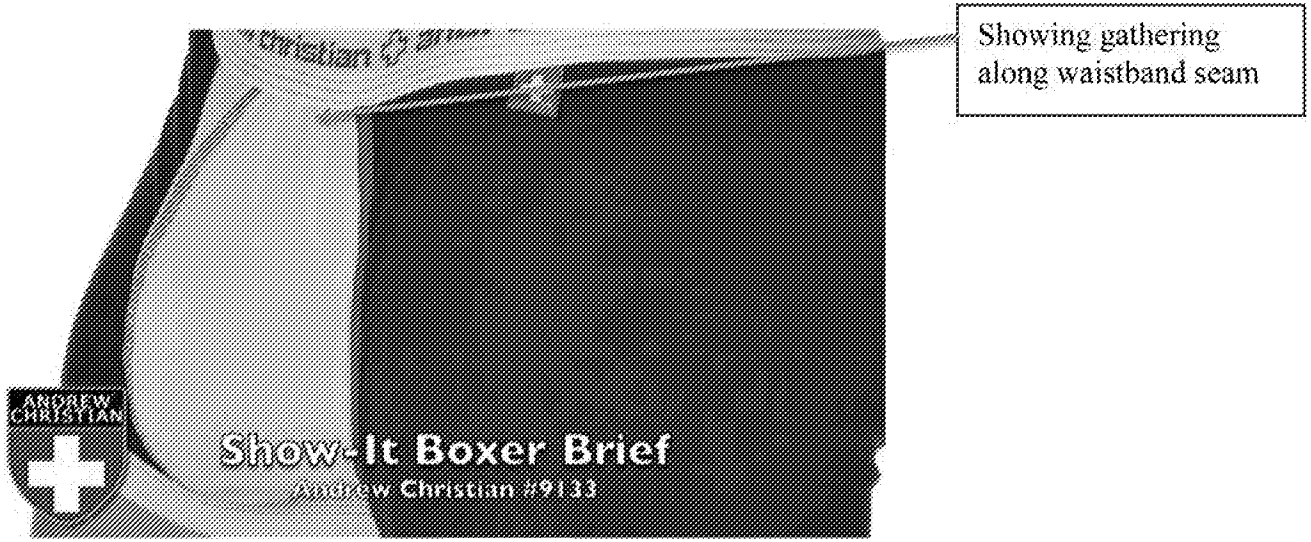

The front portion of the 9133 Show-It Boxer is gathered from side to side and top to bottom by the stretch panel and defines a three-dimensional pouch between the stretch panel and the front portion for receiving and holding the wearer's genitals while the garment is being worn.

Pakage Apparel EX2001
Page 1152 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art
	See Show-It 2009 Line Sheet at ACI000092, depicting both the 9132 Show-It Brief and the 9133 Show-It Boxer and describing "Show-It™ with Show-It Technology 2.0" with "contrasting pouch [that] accentuates front."  Three Dimensional Pouch (a concave space) behind Front Portion (can see three-dimensional nature of Pouch inside Front Portion in left three pictures) - the Pouch is receiving and holding the wearer genitals while the 9132 Show-It Brief is being worn *Id.* The following screenshots from the ACI000038 publication show gathering of the "front portion" along one side seam and the waistband seam. The gathering of the "front portion" along the other side seam is not visible, based on the orientation in the screenshot, and the gathering of the "front portion" along the first seam is not visible, as the first seam is hidden by the pouch of the 9133 Show-It Boxer and the legs of the wearer.

Page 1153 of 1677
IPR2024-01163

Either Anticipation by U.S. Patent Publication No. 2004/0025218 (Published Feb. 12, 2004) or Obviousness In View of Andrew Christian Printed Publications and EP O 476 818 or the '369 Patent

Claim 1	Exemplary Disclosure in Prior Art
	 AC1000038 at 2:52.

Pakage Apparel EX2001
Page 1154 of 1677
IPR2024-01163

Claim 1	Exemplary Disclosure in Prior Art

ACI000038 at 3:05.

To the extent Plaintiffs contend the ACI000038 publication or the Show-It 2009 Line Sheet does not expressly, implicitly, or inherently disclose that the front portion of the 9133 Show-It Boxer is gathered from side-to-side and top-to-bottom by the stretch panel and defines a three-dimensional pouch between the stretch panel and the front portion for receiving the wearer's genitals and holding the wearer's genitals while the garment is being worn, one of ordinary skill in the art would, based on one's knowledge and the disclosure in the ACI000038 publication or the Show-It 2009 Line Sheet, understand how to modify 9133 Show-It Boxer to meet this limitation.

To the extent Plaintiffs contend the '218 Publication, alone or in combination with the 9132 Show-It Brief/9133 Show-It Boxer, does not expressly, implicitly, or inherently disclose that the front portion is gathered from side-to-side and top-to-bottom by the stretch panel and defines a three-dimensional pouch between the stretch panel and the front portion for receiving the wearer's genitals and holding the wearer's genitals while the garment is being worn, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, alone or in combination with the 9132 Show-It Brief/9133 Show-It Boxer, understand how to modify the '218

Pakage Apparel EX2001
Page 1155 of 1677
IPR2024-01163

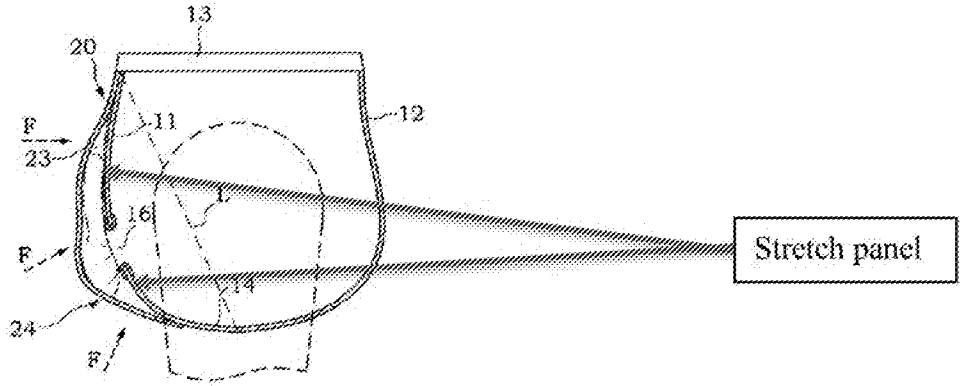

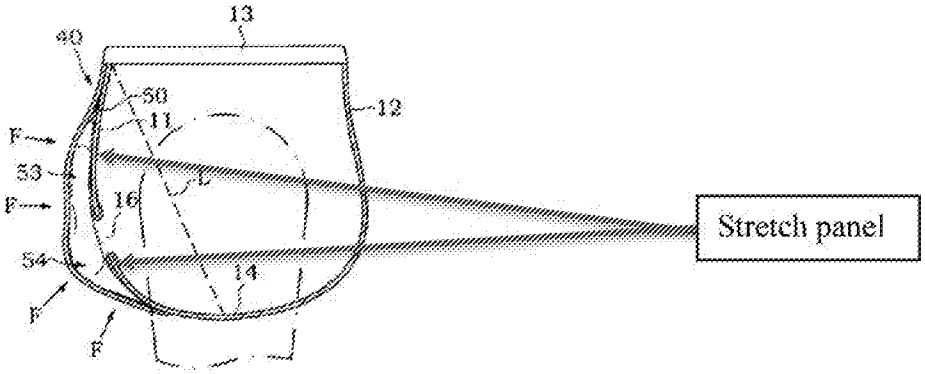

Claim 1	Exemplary Disclosure in Prior Art
	Publication, alone or in combination with the Show-It 2009-2010 Catalog, the ACI000038 publication, the ACI000040 publication, and/or the Show-It 2009 Line Sheet, to meet this limitation. Specifically, one of ordinary skill in the art would understand how to make a garment wherein the front portion is gathered from side-to-side and top-to-bottom by the stretch panel, wherein the stretch panel has a length when unstretched smaller than a length measured along the front portion between the first seam and waistband seam and a width when unstretched smaller than a width measured along the front portion between the side seams. **For example, EP O 476 818 teaches a method of gathering from side-to-side and top-to-bottom by an elastic fabric.** *See*, "The garment now has a waist opening 31 and in accordance with the present invention, an elasticated band 32 is secured in face to face contact to a marginal portion 33 of the garment surrounding the waist opening 31. The band 32 is secured to the garment whilst in a tensioned condition (i.e. stretched condition) so that on relaxation, the fabric of the marginal portion 33 is ruched thereby enabling the band to stretch when the garment is being worn." (4:4-12) "The operative inserts the garment over the band, drops the presser foot 56, sews a pre-set number of stitches, typically two or three, after which the roller 59 drops automatically, and the metering device 62 automatically reverses to apply the pre-programmed tension to the band so that the ruched effect can be achieved." (6:47-53)

Claim 2	Exemplary Disclosure in Prior Art
[2] A garment according to claim 1 wherein the stretch panel has asymmetrical stretch characteristics such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband.	The obviousness combinations asserted and disclosed in this chart for claim 2 are as follows: • '218 Publication in view of Andrew Christian printed publications • '218 Publication in view of Andrew Christian printed publications in further view of EP O 476 818 • '218 Publication in view of Andrew Christian printed publications in further view of the '369 Patent See above regarding claim 1. The Court has construed "asymmetrical stretch characteristics" as "a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction."

Pakage Apparel EX2001
Page 1156 of 1677
IPR2024-01163

Claim 2	Exemplary Disclosure in Prior Art
	The '218 Publication discloses a garment wherein the stretch panel has a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband. *See*, In particular, the only material disclosed by the '218 Publication is an elastically resilient four-way stretch material, as discussed in 1.3, above. "[0021] . . . The cover panel is made of a piece of elastic, ventilating cloth (cotton cloth or spandex- contained meshed cloth), having top and bottom ends respectively fixedly fastened to the waistband 13 and the crotch 14." "[0024] Referring to FIGS. 4, 5, 9, 10 and 11, when the undergarment put on the user's body, the undergarment body 10 and the cover panel 20 or 40 are stretched outwards into a three-dimensional status. At this time, the elastic material property of the cover panel 20 or 40 produces components of force F in direction toward the imaginary straight line L between the waistband and the crotch, keeping the cover panel 20 or 40 closely attached to the lower part of the user's abdomen."

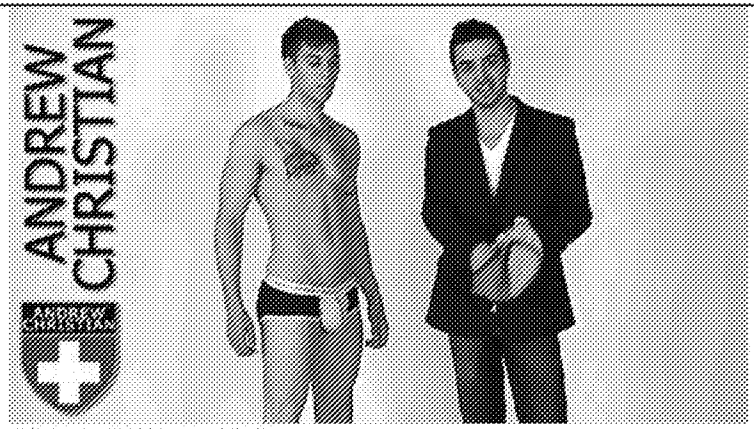

Pakage Apparel EX2001
Page 1157 of 1677
IPR2024-01163

Claim 2	Exemplary Disclosure in Prior Art
	 Fig.5  Fig.11

Pakage Apparel EX2001
Page 1158 of 1677
IPR2024-01163

Claim 2	Exemplary Disclosure in Prior Art
	To the extent Plaintiffs contend the '218 Publication does not expressly, implicitly, or inherently disclose a garment wherein the stretch panel has asymmetrical stretch characteristics such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, understand how to modify the disclosure of the '218 Publication to meet this limitation. Alternatively, one of ordinary skill could modify the '218 Publication in view of the 9132 Show-It Brief/9132 Show-It Boxer and/or the '369 Patent to meet this limitation. **The 9132 Show-It Brief is a garment wherein the stretch panel has a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband.** ***See,*** In the screenshot from the ACI000040 publication below, Andrew Christian is demonstrating the elastically resilient four way stretch of the "comfy cup" (the Stretch Panel) by placing his hand through the opening of the Stretch Panel of the 9132 Show-It Brief and into the Pouch, as the "comfy cup" (the Stretch Panel) stretches in length (a direction between the top edge and bottom edge) and width (a direction between the side edges). The Stretch Panel appears to stretch more in a direction parallel to the waistband than in the direction at right angles to the waistband:

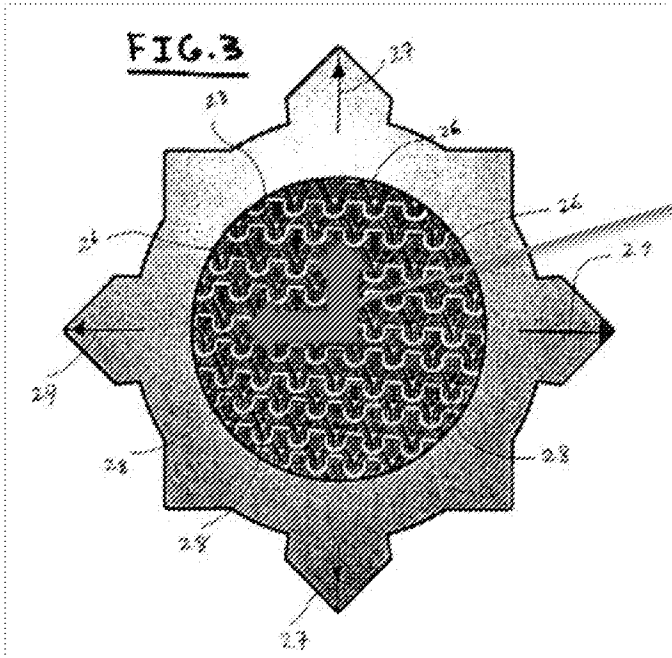

Pakage Apparel EX2001
Page 1159 of 1677
IPR2024-01163

Claim 2	Exemplary Disclosure in Prior Art
	 ACI000040 at 00:20. The Show-It 2009 Line Sheet at ACI000092 discloses that the 9132 Show-It Brief's "Comfy cup cradles and lifts." On information and belief, the Stretch Panel ("comfy cup") of the 9132 Show-It Brief must stretch more easily in the direction parallel to the waistband (to be able to accommodate the genitalia of the wearer) and must stretch less easily in a direction at right angles to the waist band (to be able to provide an upward force needed to "lift" the genitalia). To the extent Plaintiffs contend the ACI000040 publication or Show-It 2009 Line Sheet does not expressly, implicitly, or inherently disclose a garment wherein the stretch panel has asymmetrical stretch characteristics such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband, one of ordinary skill in the art would, based on one's knowledge and the disclosure of the ACI000040 publication or Show-It 2009 Line Sheet, understand how to modify the 9132 Show-It Brief to meet this limitation. **The 9133 Show-It Boxer is a garment wherein the stretch panel has a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband.** ***See,***

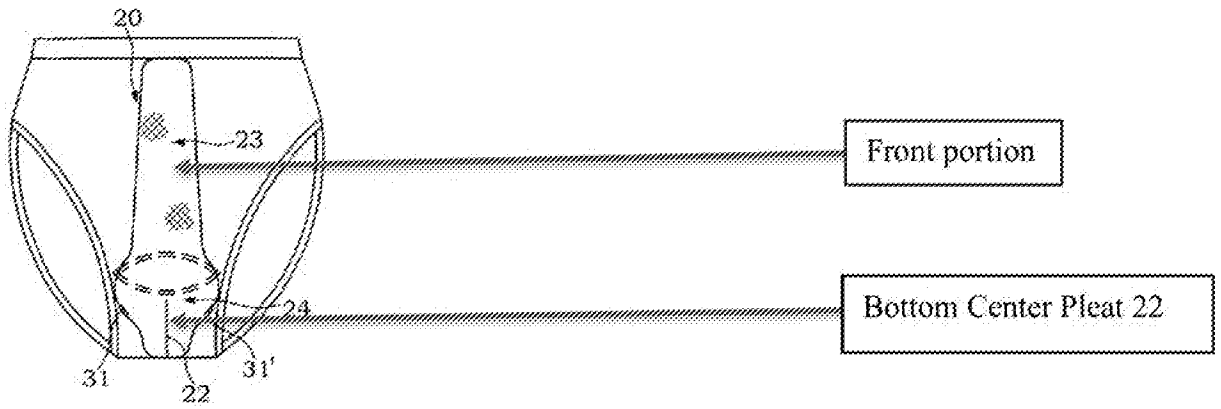

Pakage Apparel EX2001
Page 1160 of 1677
IPR2024-01163

Claim 2	Exemplary Disclosure in Prior Art
	The Show-It 2009 Line Sheet at ACI000092 discloses that the 9133 Show-It Boxer utilizes the same "Show-It Technology 2.0" utilized in the 9132 Show-It Brief. *See* Show-It 2009 Line Sheet at ACI000092, depicting both the 9132 Show-It Brief and the 9133 Show-It Boxer and describing "Show-It™ with Show-It Technology 2.0" with "our comfy cup." On information and belief, the inside view of the 9133 Show-It Boxer would show a "comfy cup" (that is, a Stretch Panel) inside the Front Portion and having the same stretch characteristics as disclosed in the ACI000040 publication at 00:20 above. The Show-It 2009 Line Sheet at ACI000092 also discloses that the 9133 Show-It Boxer's "Comfy cup cradles and lifts." On information and belief, the Stretch Panel ("comfy cup") of the 9133 Show-It Boxer must stretch more easily in the direction parallel to the waistband (to be able to accommodate the genitalia of the wearer) and must stretch less easily in a direction at right angles to the waist band (to be able to provide an upward force needed to "lift" the genitalia). To the extent Plaintiffs contend the Show-It 2009 Line Sheet or the ACI000040 publication does not expressly, implicitly, or inherently disclose a garment wherein the stretch panel has asymmetrical stretch characteristics such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband, one of ordinary skill in the art would, based on one's knowledge and disclosure of the Show-It 2009 Line Sheet or the ACI000040 publication, understand how to modify the 9133 Show-It Boxer to meet this limitation. **The '369 Patent discloses a fabric with a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction such that it stretches more easily in one direction and less easily in a direction at right angles to the first direction.** In particular, the '369 Patent discloses a warp knit, which has asymmetrical stretch characteristics. *See*, "With reference to FIG. 3, the warp knit is generally known in the art for having strands 26 running substantially parallel along a direction 27 of the fabric. Lateral threads 28 running substantially perpendicular to the strands 26 and in a direction 29 encircle sets of two strands 26 at once. Each adjacent lateral thread 28 encircles one of the two strands 26 in the first set and one of the two strands 26 from the second set. This pattern is repeated throughout. The

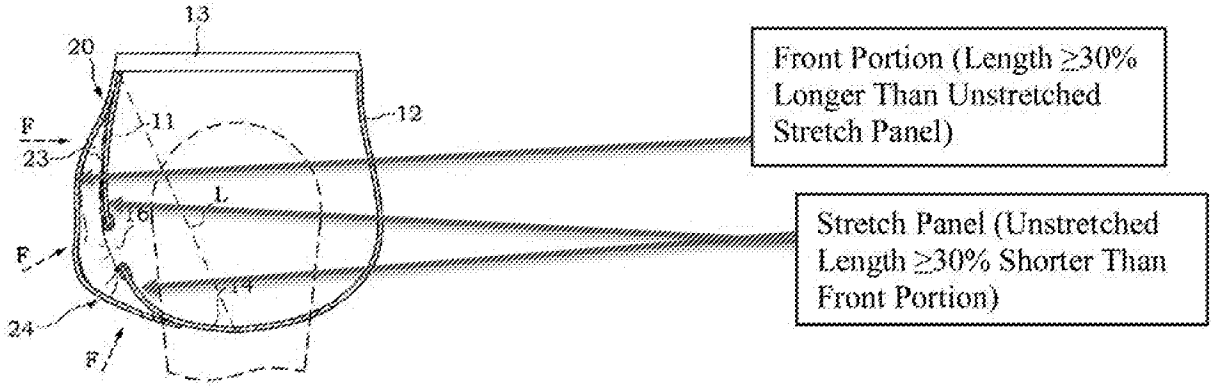

Pakage Apparel EX2001
Page 1161 of 1677
IPR2024-01163

Claim 2	Exemplary Disclosure in Prior Art
	warp knit, by virtue of having parallel strands 26 along the direction 27 of the fabric, is resistant to stretch in the direction 27 when compared to other knitted fabrics, which may undesirably stretch. Thus, the warp knit fabric stretches less along the direction 27 than along the direction 29." (2:40-52) "The warp knit fabric used to form the groin portion 14 can stretch a relatively greater amount in the horizontal direction, roughly parallel to the waistband, than in the vertical direction. The ability to stretch in the horizontal direction allows for the accommodation of different sizes and shapes of male genitals. The groin portion stretches in the horizontal direction to accommodate the genitals of the supporter user while maintaining slight pressure on the genitals in the horizontal direction, thus aiding the cupping and compression functions of the supporter 10." (3:1-10)  Direction 27 is at a right angle to Direction 29 (and vice versa). The "warp knit" (the fabric) stretches more easily in the horizontal direction, that is, Direction 29 (roughly parallel to the waistband), than in the vertical direction, that is, Direction 27 (roughly at a right angle to the waistband)

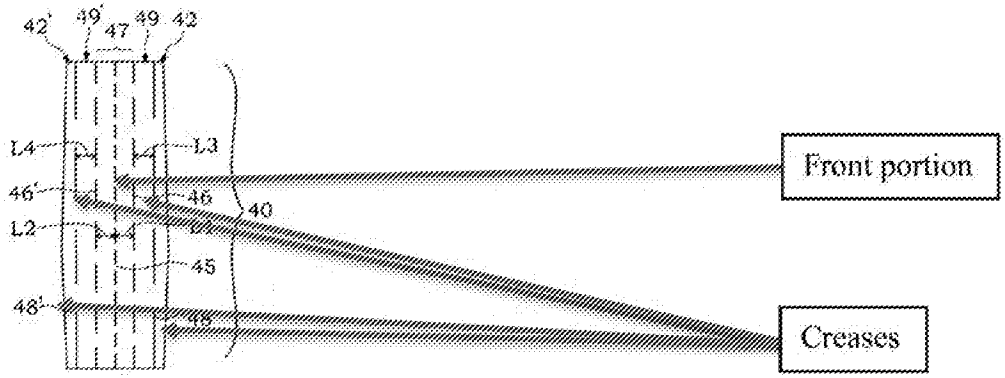

Pakage Apparel EX2001
Page 1162 of 1677
IPR2024-01163

Claim 5	Exemplary Disclosure in Prior Art
[5] A garment according to claim 1 wherein the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%.	The obviousness combinations asserted and disclosed in this chart for claim 5 are as follows: • '218 Publication in view of Andrew Christian printed publications • '218 Publication in view of Andrew Christian printed publications in further view of EP O 476 818 See above regarding claim 1. **The '218 Publication discloses the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%.** ***See,*** In particular, the length measured along material of the cover panel (front portion) from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, as described in 1.4, above. This length exceeds that of the stretch panel when unstretched by at least 30% for the same reasons described in 1.4, above.  Fig.3

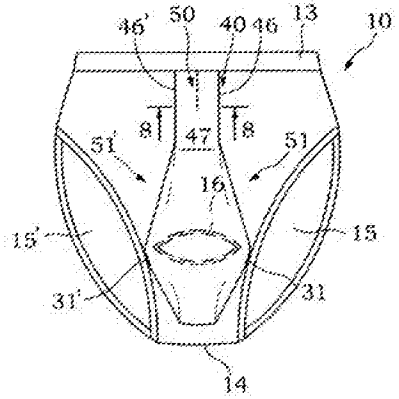

Fig.7

To the extent Plaintiffs contend the '218 Publication does not expressly, implicitly, or inherently disclose the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%, one of ordinary skill in the art would, based on one's knowledge and the '218 Publication, understand how to modify the disclosure of the '218 Publication to meet this limitation.

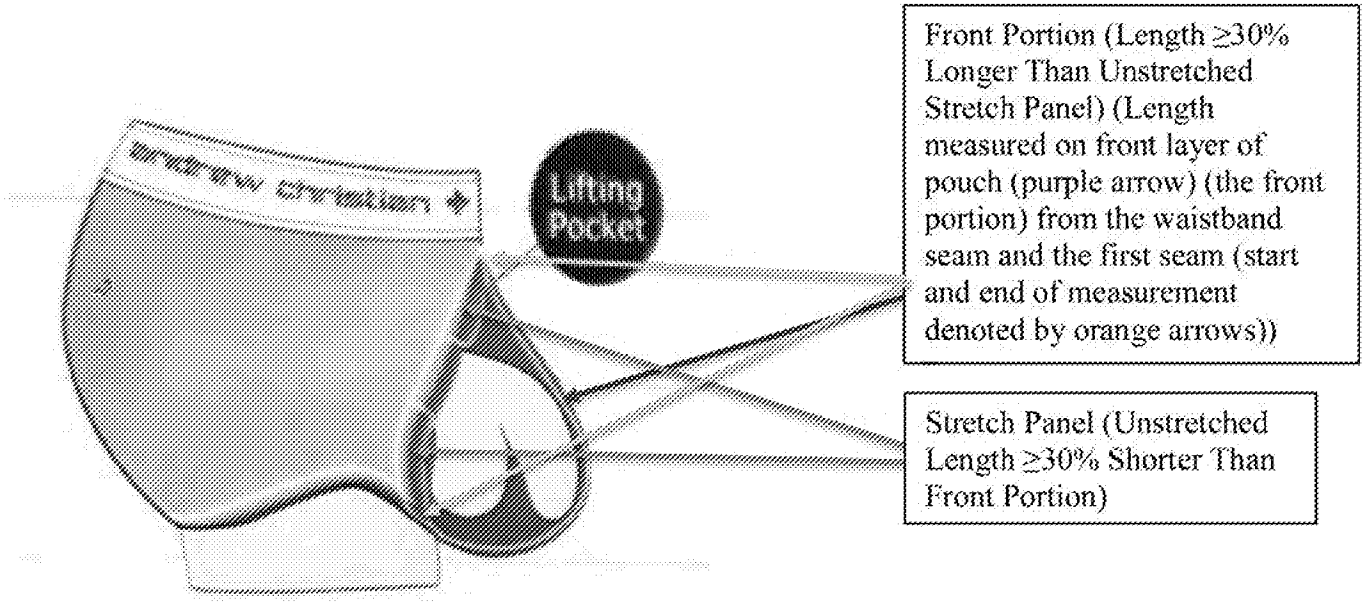

Alternatively, one with ordinary skill could modify the '218 Publication in view of Show-It 2009-2010 Catalog and/or Show-It 2009 Line Sheet (disclosure below) to meet this limitation.

In the 9132 Show-It Brief, the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%. ***See,***

The Show-It 2009-2010 Catalog includes an image depicting a three-dimensional pouch formed between the front portion and the stretch panel ("comfy cup"). The length of the material of the front portion from the first seam to the waistband seam must be at least 30% longer than the length measured along the material of the stretch panel from the

Pakage Apparel EX2001
Page 1166 of 1677
IPR2024-01163

Claim 5	Exemplary Disclosure in Prior Art
	first seam to the waistband seam, when unstretched, to account for the creation of the three-dimensional pouch (the concave space) that is large enough to hold a wearer's genitals.

Show-It 2009-2010 Catalog at ACI000094.

To the extent Plaintiffs contend the Show-it 2009-2010 Catalog does not expressly, implicitly, or inherently disclose that the 9132 Show-It Brief includes the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%, one of ordinary skill in the art would, based on one's knowledge and the disclosure in the Show-it 2009-2010 Catalog, understand how to modify the 9132 Show-It Brief to meet this limitation.

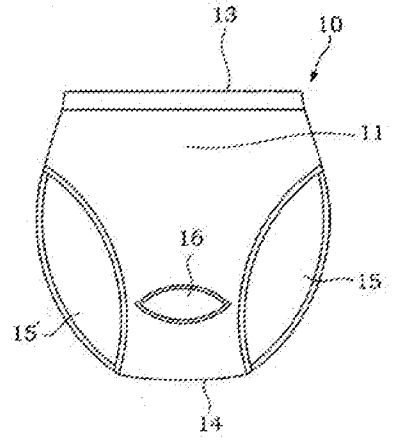

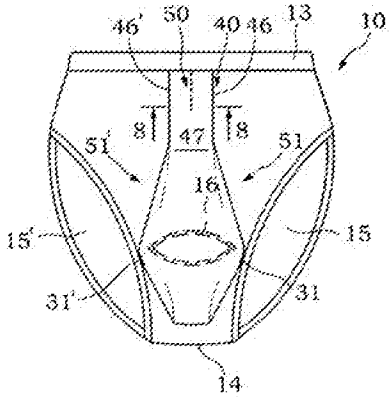

In the 9133 Show-It Boxer, the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%. ***See,***

Pakage Apparel EX2001
Page 1167 of 1677
IPR2024-01163

Claim 5	Exemplary Disclosure in Prior Art
	The length of the material of the front portion from the first seam to the waistband seam must be at least 30% longer than the length measured along the material of the stretch panel from the first seam to the waistband seam, when unstretched, to account for the creation of the three-dimensional pouch (the concave space) that is large enough to hold a wearer's genitals. The Show-It 2009 Line Sheet at ACI000092 discloses that the 9133 Show-It Boxer utilizes the same "Show-It Technology 2.0" utilized in the 9132 Show-It Brief. *See* Show-It 2009 Line Sheet at ACI000092, depicting both the 9132 Show-It Brief and the 9133 Show-It Boxer and describing "Show-It™ with Show-It Technology 2.0" with "our comfy cup." On information and belief, an inside view of the 9133 Show-It Boxer would show a "comfy cup" (that is, a Stretch Panel) inside the Front Portion as shown above in Show-It 2009-2010 Catalog at ACI000094. To the extent Plaintiffs contend the Show-It 2009-2010 Catalog does not expressly, implicitly, or inherently disclose that the 9133 Show-It Boxer includes the length measured along material of the front portion from the first seam to the waistband seam exceeds a length measured along the fabric of the stretch panel when unstretched, by at least 30%, one of ordinary skill in the art would, based on one's knowledge and the disclosure in the Show-It 2009-2010 Catalog, understand how to modify the 9133 Show-It Boxer to meet this limitation.

Claim 6	Exemplary Disclosure in Prior Art
[6] A garment according to claim 1 wherein the garment is a pair of undershorts.	The obviousness combinations asserted and disclosed in this chart for claim 6 are as follows: • '218 Publication in view of Andrew Christian printed publications • '218 Publication in view of Andrew Christian printed publications in further view of EP O 476 818 See above regarding claim 1. **The '218 Publication discloses a pair of undershorts.** ***See,*** "A men's undergarment" (Abstract) "MEN'S UNDERGARMENT" (Title)

IPR2024-01163

Claim 8	Exemplary Disclosure in Prior Art
	The Show-It 2009 Line Sheet at ACI000092 discloses that the 9133 Show-It Boxer utilizes the same "Show-It Technology 2.0" utilized in the 9132 Show-It Brief. *See* Show-It 2009 Line Sheet at ACI000092, depicting both the 9132 Show-It Brief and the 9133 Show-It Boxer and describing "Show-It™ with Show-It Technology 2.0" with "our comfy cup." On information and belief, an inside view of the 9133 Show-It Boxer would show a "comfy cup" (that is, a Stretch Panel) with an opening with a width in excess of 2 cm as shown in the screenshots of the ACI000040 production, above.

Claim 9	Exemplary Disclosure in Prior Art
[9] A garment according to claim 1 wherein: the front portion depends downwardly from the waistband and the front portion is formed to provide the pouch at a mid-section thereof; the stretch panel is positioned to be disposed forward of a wearer's perineum when the garment is worn, whereby, in use, a scrotum of a wearer of the garment is supported underneath by the stretch panel to contain a wearer's penis and scrotum in the pouch.	The obviousness combinations asserted and disclosed in this chart for claim 9 are as follows: • '218 Publication in view of Andrew Christian printed publications • '218 Publication in view of Andrew Christian printed publications in further view of EP O 476 818 See above regarding claim 1. **The '218 Publication discloses a front portion which depends downwardly from the waistband and the front portion is formed to provide a pouch at a mid-section thereof; the stretch panel positioned to be disposed forward of a wearer's perineum when the garment is worn, whereby, in use, a scrotum of a wearer of the garment is supported underneath by the stretch panel to contain a wearer's penis and scrotum in the pouch.** ***See,*** In particular, the '218 Publication discloses the cover panel (front portion) attached to the waistband seam (depending downwardly from the waistband), which forms a pouch in conjunction with the stretch panel, as described in 1.3 and 5, above. The stretch panel is disposed forward of a wearer's perineum. When in use, the wearer's penis and scrotum is supported underneath by the stretch panel to contain a wearer's penis and scrotum in the pouch. "[0009] . . . The cover panel defines with the front panel a penis receiving space above the opening of the front panel, and a scrotum receiving space below the opening of the front panel."

Pakage Apparel EX2001

To the extent Plaintiffs contend the Show-It 2009 Line Sheet or the ACI000040 publication does not expressly, implicitly, or inherently disclose the 9133 Show-It Boxer including a stretch panel formed from a single unitary piece of woven fabric, one of ordinary skill in the art would, based on one's knowledge and the Show-It 2009 Line Sheet or the ACI000040 publication, understand how to modify the 9133 Show-It Boxer to meet this limitation.

Claim 15	Exemplary Disclosure in Prior Art
[15] A garment according to claim 1 wherein the pouch comprises a dart seam stitched along a bottom portion of the pouch and substantially centrally to provide extra volume in front of and underneath the genitals of a wearer.	The obviousness combinations asserted and disclosed in this chart for claim 15 are as follows: • '218 Publication in view of Andrew Christian printed publications • '218 Publication in view of Andrew Christian printed publications in further view of EP O 476 818 See above regarding claim 1. The Court has construed "a dart seam stitched along a bottom portion of the pouch" as "a shaping seam stitched along a bottom portion of the pouch." **The '218 Publication discloses a pouch with a shaping seam stitched along a bottom portion of the pouch and substantially centrally to provide extra volume in front of and underneath the genitals of a wearer. *See,*** In particular, the '218 Publication discloses a bottom center pleat (shaping seam stitched along a bottom portion of the pouch and substantially centrally), which provides extra volume in front of and underneath the genitals of the wearer.

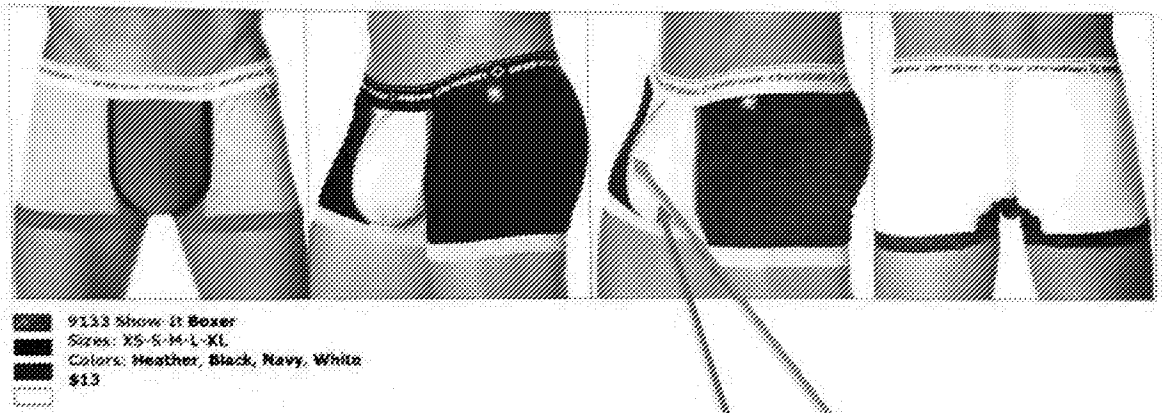

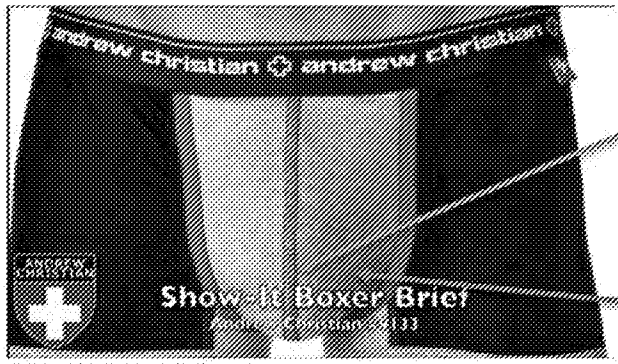

Pakage Apparel EX2001
Page 1194 of 1677
IPR2024-01163

Claim 15	Exemplary Disclosure in Prior Art
	"[0022] FIGS. 2-5 show the first embodiment of the present invention. As illustrated, the cover panel 20 is an elongated piece of cloth, having a bottom center pleat 22 longitudinally upwardly extended from the bottom end thereof and two smoothly arched side flaps 21 and 21' symmetrically formed integral with two opposite lateral sides thereof near the bottom end. When fastened to the undergarment body 10, the upper part of the cover panel 20 defines with the undergarment body 10 a penis receiving space 23 above the opening 16 (see also FIG. 1) for receiving the user's penis, and the side flaps 21 and 21' define with the undergarment body 10a scrotum receiving space 24 below the opening 16 for receiving the user's scrotum. Further, because of the effect of the bottom center pleat 22 [the shaping seam stitched along a bottom portion of the pouch], the lower part of the cover panel 20 protrudes forwards from the undergarment body 10, forming a three-dimensional status. Further, the border areas of the side flaps 21 and 21' are respectively stitched to the undergarment body 10, forming stitched lines 31 and 31' that hold the cover panel 20 in the center position against biasing."  Fig.3 **Furthermore, the 9132 Show-It Brief includes a pouch with a shaping seam stitched along a bottom portion of the pouch and substantially centrally to provide extra volume in front of and underneath the genitals of a wearer.** ***See,***

IPR2024-01163

Either Anticipation By Canadian Industrial Design Registration No. 133058 (Registered and Published June 17, 2010) (the "'058 Design") or Obviousness in View of Andrew Christian Style No. 9132 (Show-It Brief) and 9133 (Show-It Boxer) and/or the '369 Patent

The disclosure of Canadian Industrial Design Registration No. 133058 (registered and published June 17, 2010) (the "'058 Design") either expressly, implicitly, or inherently anticipates the asserted claims of U.S. Patent No. 10,034,496 under 35 U.S.C. § 102, and renders those claims obvious under 35 U.S.C. § 103 in view of the Andrew Christian Products in Style No. 9132 (Show-It Brief) ("9132 Show-It Brief") and Style No. 9133 (Show-It Boxer) ("9133 Show-It Boxer") (on sale at least as early as March 6, 2009), and/or U.S. Patent No. 7,631,369 (issued Dec. 15, 2009) (the "'369 Patent"), as set forth in the chart below.

The obviousness combinations asserted and disclosed in this chart are as follows:

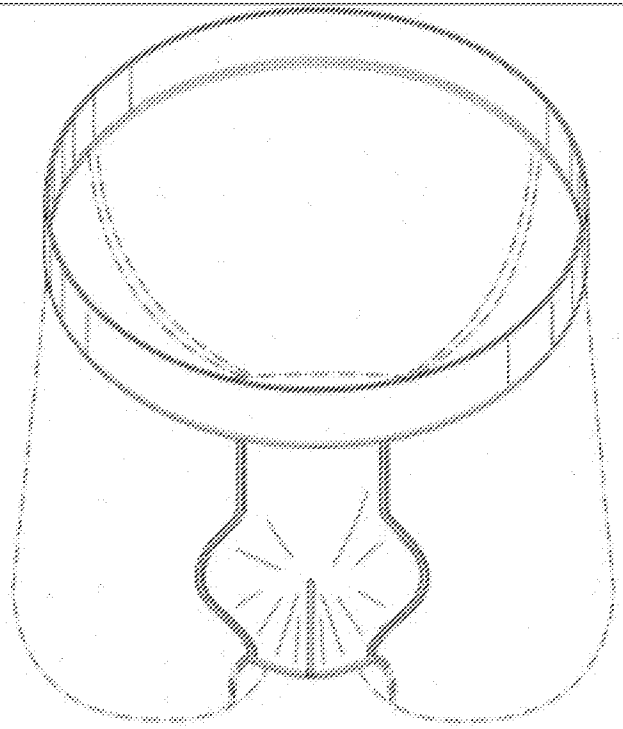

- '058 Design in view of 9132 Show-It Brief/9133 Show-It Boxer (all asserted claims)
- '058 Design in view of 9132 Show-It Brief/9133 Show-It Boxer in further view of '369 Patent (claim 2)

One of ordinary skill in the art of the Asserted Patents would understand to combine these references as they relate to men's underwear. The 9132 Show-It Brief and the 9133 Show-It Boxer, are men's underwear; the '058 Design discloses a "men's undergarment;" and the '369 Patent discloses "performance underwear" for men.

Claim 1	Exemplary Disclosure in Prior Art
[1.pre] 1. A male garment comprising:	**The '058 Design discloses a male garment.** *See,* "Men's Undergarment" (Title)

Claim 2	Exemplary Disclosure in Prior Art
	stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband. *See,* The 9133 Show-It Boxer's "stretch panel" comprises [redacted] a material that is capable of stretching more easily in a first direction than a second direction at right angles to the first direction. February 5, 2009 Pattern Sheets at ACI000151. The "inner cup" of the 9133 Show-It Boxer (the Stretch Panel) "lifts and presents" the male genitalia, which indicates that the "inner cup" (the Stretch Panel) will stretch less easily in a direct at right angles to the waistband (i.e., up and down) – to "lift" up it needs to stretch relatively less in the "up" direction. "Show-It Technology 2.0 features a hidden "comfy cup" that gently lifts and presents the package to the front. The horseshoe shaped inner cup [the Stretch Panel] is lined by soft elastic that gently aids in the lifting…" March 2009 Press Release. *See also* March 6, 2009 Blog Entry and March 11, 2009 Blog Entry for the same description. To the extent Plaintiffs contend the 9133 Show-It Boxer does not expressly, implicitly, or inherently disclose a garment wherein the stretch panel has asymmetrical stretch characteristics such that the stretch panel stretches more easily in a direction parallel to the waistband and less easily in a direction at right angles to the waistband, one of ordinary skill in the art would, based on one's knowledge and the 9133 Show-It Boxer, understand how to modify the 9133 Show-It Boxer to meet this limitation. **The '369 Patent for "Performance Underwear" discloses a fabric with a property wherein the degree of stretch produced when force is applied in one direction differs from the degree of stretch produced when the same amount of force is applied in a direction at right angles to the first direction such that it stretches more easily in one direction and less easily in a direction at right angles to the first direction. *See,*** In particular, the '369 Patent discloses a warp knit, which has asymmetrical stretch characteristics. *See,* "With reference to FIG. 3, the warp knit is generally known in the art for having strands 26 running substantially parallel along a direction 27 of the fabric. Lateral threads 28 running substantially perpendicular to the strands 26 and in a direction 29 encircle sets of two strands 26 at once. Each adjacent lateral thread 28 encircles one of the two

Pakage Apparel EX2001
Page 1253 of 1677
IPR2024-01163

Claim 2	Exemplary Disclosure in Prior Art
	strands 26 in the first set and one of the two strands 26 from the second set. This pattern is repeated throughout. The warp knit, by virtue of having parallel strands 26 along the direction 27 of the fabric, is resistant to stretch in the direction 27 when compared to other knitted fabrics, which may undesirably stretch. Thus, the warp knit fabric stretches less along the direction 27 than along the direction 29." (2:40-52) "The warp knit fabric used to form the groin portion 14 can stretch a relatively greater amount in the horizontal direction, roughly parallel to the waistband, than in the vertical direction. The ability to stretch in the horizontal direction allows for the accommodation of different sizes and shapes of male genitals. The groin portion stretches in the horizontal direction to accommodate the genitals of the supporter user while maintaining slight pressure on the genitals in the horizontal direction, thus aiding the cupping and compression functions of the supporter 10." (3:1-10)  Direction 27 is at a right angle to Direction 29 (and vice versa). The "warp knit" (the fabric) stretches more easily in the horizontal direction, that is, Direction 29 (roughly parallel to the waistband), than in the vertical direction, that is, Direction 27 (roughly at a right angle to the waistband)
