Subject: Conveyor Meeting

Mike,

It looks like Scott has no scheduled meetings on Monday, and it also looks to be open Tuesday afternoon.

In our meeting we would like to discuss:

The possibility of varying the conveyor angle to customize the installation to the frac location.
How you intend to collapse the conveyor to a transportable length.
How you intend to stabilize the installation on location.
How we intend to provide dust control.
What is the horsepower requirement?
Is it possible to incorporate the transloader with the silo elevator?

When we present the concept for budget approval it would helpful to have supporting examples from existing equipment as to how these tasks are to be accomplished.
