**Subject:** distribution ideas

Total Sand Solution uses a gravity distributor  
<https://tssands.com/services/>

Proppant logistics uses a multistage telescoping belt conveyor  
<https://www.foresitelogistics.com/services/tower-belt-system>

Sand Revolution move the trailer chassis to distribute the sand  
<https://www.maxximtrailer.com/sand-conveyor>

We are not against any idea or combination. Remember we can modify the silo inlets to facilitate filling, possibly by locating the inlets for narrowest possible spacing. My thought is that the method needs to be simple and reliable. I

appreciate any approach that reduces total lead time. I would not be against the air slide even with its limitations regarding moisture content. Consider that we do sometimes get slugs of wet sand due to rain on transports.
