A United Launch Alliance Atlas 5 rocket blasts off from SLC-41 at Cape Canaveral Air Force Station on Feb. 24, 2012, with the U.S. Navy's Mobile User Objective System-1 (MUOS-1) satellite. Credit: Pat Corkery, United Launch Alliance

A Trusted Partner. A National Resource.

The Aerospace Corporation has provided independent technical and scientific research, development, and advisory services to national security space programs since 1960. We operate a federally funded research and development center (FFRDC) for the United States Air Force and the National Reconnaissance Office and support all national security space programs. We also apply more than 50 years of experience with space systems to projects for civil agencies like NASA and the National Oceanic and Atmospheric Administration, commercial companies, universities, and international organizations in the national interest.

From our inception, our highly skilled technical staff has focused on ensuring the success of every mission and developing the most effective and economic space-related hardware and software in the world. Our insight and involvement in space programs has significantly reduced the risk of launch failure and increased both satellite endurance and performance. Avoiding a single catastrophic failure resulting in the loss of operational capabilities can save the government more than three times the total annual Aerospace FFRDC budget.

Our greatest asset is the technical expertise of our people. Our involvement spans all facets of space systems, including systems engineering, testing, analysis, and development; acquisition support; launch readiness and certification; anomaly resolution; and the application of new technologies for existing and next-generation space systems. Our state-of-the-art laboratory facilities are staffed by some of the leading scientists in the world.

The Aerospace Corporation is headquartered in El Segundo, California, and has other locations throughout the nation. The staff comprises approximately 4,000 employees, two-thirds of whom are members of the technical staff.
