PATENT ASSIGNMENT AGREEMENT

This Assignment Agreement (“**Agreement**”), dated and effective as of September 4, 2023, is between and by Rule 14 LLC (“**Rule 14**”), a Nevada limited liability corporation, located at 2701 E Grauwylar Road, Irving, TX 75061, SPX Holdings, LLC (“**SPX Holdings**”) a Nevada limited liability company, located at 3003 Pennsylvania Ave, Santa Monica, California 90404, and the individuals Parvinder Chadha, Sharon Gill Chadha, and Xin Cheng (collectively, the “**Inventors**”). Rule 14, SPX Holdings, and the Inventors agree and undertake as follows:

Witnesseth

WHEREAS, Rule 14, SPX Holdings, and the Inventors acknowledge that the Patents, as defined below, were initially conveyed, transferred, and assigned to Rule 14;

WHEREAS, Rule 14, SPX Holdings, and the Inventors acknowledge that the Patents were conveyed, transferred, and assigned to SPX Holdings on March 18, 2022;

NOW, THEREFORE, in consideration of the agreements made herein, and of the mutual benefits to be derived hereby, SPX Holdings desires to convey, transfer, and assign to Rule 14 the Patents, and have agreed to execute and deliver this Agreement, for recording with the United States Patent and Trademark Office;

Rule 14, SPX Holdings, and the Inventors as such hereto agree as follows:

Terms and Conditions

1. Definitions

1.1 “**Patents**” means the patents listed on Schedule A attached hereto.

2. Assignment

2.1 For good and valuable consideration of the sum of one dollar (\$1.00), the receipt and sufficiency of which are hereby acknowledged, SPX Holdings hereby irrevocably conveys, transfers, and assigns to Rule 14, and Rule 14 hereby accepts, all of SPX Holdings’ rights, title, and interest in and to the following:

- (a) the Patents;
- (b) all rights of any kind whatsoever of SPX Holdings accruing under any of the foregoing provided by applicable law of any jurisdiction, by international treaties and conventions, and otherwise throughout the world;
- (c) any and all royalties, fees, income, payments, and other proceeds now or hereafter due or payable with respect to any and all of the foregoing; and
- (d) any and all claims and causes of action with respect to any of the foregoing, whether accruing on or after the date hereof, including all rights to and claims for damages, restitution, and injunctive and other legal and equitable relief for present and future infringement, misappropriation, violation, misuse, breach, or default, with the

right but no obligation to sue for such legal and equitable relief and to collect, or otherwise recover, any such damages.

3. Acknowledgements

3.1 Rule 14, SPX Holdings, and the Inventors acknowledge that, pursuant to the June 19, 2013 ASSIGNMENT executed by the Inventors, the Inventors conveyed, transferred, and assigned the Patents to Rule 14 as of their respective dates of issuance, and conveyed, transferred, and assigned the applications which would issue as the Continuation Patents as of their filing dates.

3.2 Rule 14, SPX Holdings, and the Inventors acknowledge that, pursuant to the March 18, 2022 PATENT ASSIGNMENT AGREEMENT between Rule 14 and SPX Holdings, Rule 14 conveyed, transferred, and assigned the Patents to SPX Holdings as of March 18, 2022.

3.3 Rule 14, SPX Holdings, and the Inventors acknowledge that the March 18, 2022 PATENT ASSIGNMENT AGREEMENT between the Inventors and SPX Holdings does not signify that the Patents were owned by the Inventors as of March 18, 2022.

4. Recordation and Further Actions

4.1 SPX Holdings and the Inventors hereby authorizes the Commissioner for Patents in the United States Patent and Trademark Office to record and register this Patent Assignment upon request by Rule 14. Following the date hereof, upon Rule 14's reasonable request, SPX Holdings and the Inventors shall take such steps and actions, and provide such cooperation and assistance to Rule 14 and its successors, assigns, and legal representatives, including the execution and delivery of any affidavits, declarations, oaths, exhibits, assignments, powers of attorney, or other documents, as may be necessary to effect, evidence, or perfect the assignment of the Patents to Rule 14, or any assignee or successor thereto.

5. Miscellaneous

5.1 Counterparts. This Assignment may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed one and the same agreement. A signed copy of this Assignment delivered by facsimile, e-mail, or other means of electronic transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this Assignment.

5.2 Successors and Assignments. This Assignment Agreement shall be binding upon and shall inure to the benefit of the parties hereto and their respective successors and assigns.

5.3 Governing Law. This Patent Assignment and any claim, controversy, dispute, or cause of action (whether in contract, tort, or otherwise) based upon, arising out of, or relating to this Assignment Agreement and the transactions contemplated hereby shall be governed by, and construed in accordance with, the laws of the United States and the State of Nevada, without giving effect to any choice or conflict of law provision or rule (whether of the State of Nevada or any other jurisdiction).

5.4 Severability. If any one or more of the provisions contained in this Agreement shall be invalid, illegal or unenforceable in any respect under any law applicable there, the validity,

legality and enforceability of the remaining provisions contained herein shall not in any way be affected or impaired thereby.

5.5 This Agreement supersedes any and all oral or written agreements and understandings previously made between the parties relating to the subject matter hereof. The headings of Sections of this Agreement are for convenience of reference only and shall not define or limit the provisions hereof.

[SIGNATURE PAGE FOLLOWS]

IN WITNESS WHEREOF, Rule 14, SPX Holdings, and the Inventors have duly executed and delivered this Agreement as of the date first set forth above.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Filing of terminal disclaimer does not obviate requirement for response under 37 CFR 1.111 to outstanding Office Action

This electronic Terminal Disclaimer is not being used for a Joint Research Agreement.

Owner	Percent interest
SPX HOLDINGS LLC	100%
Total	100%

The owner(s) of percent interest listed above in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of any patent granted on pending reference Application Number(s)

Application #	Filing Date
---------------	-------------

as the term of any patent granted on said reference application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending reference application. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and any patent granted on the reference application are commonly owned. This agreement runs with any patent granted on the

instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of any patent granted on the instant application that would extend to the expiration date of the full statutory term of any patent granted on said reference application, "as the term of any patent granted on said reference application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending reference application," in the event that any such patent granted on the pending reference application: expires for failure to pay a maintenance fee, is held unenforceable, is found invalid by a court of competent jurisdiction, is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321, has all claims canceled by a reexamination certificate, is reissued, or is in any manner terminated prior to the expiration of its full statutory term as shortened by any terminal disclaimer filed prior to its grant.

The owner(s) of percent interest listed above in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of prior patent number(s)

as the term of said prior patent is presently shortened by any terminal disclaimer. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the prior patent are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of the term of any patent granted on the instant application that would extend to the expiration date of the full statutory term of the prior patent, "as the term of said prior patent is presently shortened by any terminal disclaimer," in the event that said prior patent later:

- expires for failure to pay a maintenance fee;
- is held unenforceable;
- is found invalid by a court of competent jurisdiction;
- is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321;
- has all claims canceled by a reexamination certificate;
- is reissued; or
- is in any manner terminated prior to the expiration of its full statutory term as presently shortened by any terminal disclaimer.

Terminal disclaimer fee under 37 CFR 1.20(d) included with Electronic Terminal Disclaimer request.

Applicant claims the following entity status:

Small

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

I certify, in accordance with 37 CFR 1.4(d)(4) that I am: An attorney or agent registered to practice before the Patent and Trademark Office who is of record in this application

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment is 133 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site <http://pair.uspto.gov> for additional applicants):

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The USA offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to encourage and facilitate business investment. To learn more about why the USA is the best country in the world to develop technology, manufacture products, and grow your business, visit SelectUSA.gov.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or **Fax** (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).

☐ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.

☐ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47, Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent front page, list

(1) The names of up to 3 registered patent attorneys or agents OR, alternatively,

(2) The name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1. Seyfarth Shaw LLP

2. _____

3. _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE

(B) RESIDENCE (CITY and STATE OR COUNTRY)

RULE 14

SANTA MONICA, CALIFORNIA

Please check the appropriate assignee category or categories (will not be printed on the patent): ☐ Individual ☒ Corporation or other private group entity ☐ Government

4a. The following fee(s) are submitted:

☒ Issue Fee

☐ Publication Fee (No small entity discount permitted)

☐ Advance Order - # of Copies _____

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)

☐ A check is enclosed.

☐ Payment by credit card. Form PTO-2038 is attached.

☒ The director is hereby authorized to charge the required fee(s), any deficiency, or credits any overpayment, to Deposit Account Number 50-2291 (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)

☐ Applicant certifying micro entity status. See 37 CFR 1.29

☐ Applicant asserting small entity status. See 37 CFR 1.37

☐ Applicant changing to regular undiscounted fee status.

NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.

NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.

NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Seyfarth Shaw LLP
2029 Century Park East, Suite 3500
Los Angeles, CA 90067-3063

EXAMINER	
PHAM, MICHAEL	
ART UNIT	PAPER NUMBER
2167	

DATE MAILED: 08/28/2015

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
13/928,313	06/26/2013	Sharon Gill CHADHA	79531-000002	2955
TITLE OF INVENTION: REAL-TIME AND ADAPTIVE DATA MINING				

APPLN. TYPE	ENTITY STATUS	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	SMALL	\$480	\$0	\$0	\$480	11/30/2015

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

For purposes of this notice, small entity fees are 1/2 the amount of undiscounted fees, and micro entity fees are 1/2 the amount of small entity fees.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or **Fax** (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

DATE MAILED: 08/28/2015

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

The Paperwork Reduction Act (PRA) of 1995 requires Federal agencies to obtain Office of Management and Budget approval before requesting most types of information from the public. When OMB approves an agency request to collect information from the public, OMB (i) provides a valid OMB Control Number and expiration date for the agency to display on the instrument that will be used to collect the information and (ii) requires the agency to inform the public about the OMB Control Number's legal significance in accordance with 5 CFR 1320.5(b).

The information collected by PTOL-85 Part B is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No. 13/928,313	Applicant(s) CHADHA ET AL.	
	Examiner MICHAEL PHAM	Art Unit 2167	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to 5/4/15.
☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2. ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

3. ☒ The allowed claim(s) is/are 1-21. As a result of the allowed claim(s), you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

a) ☐ All b) ☐ Some *c) ☐ None of the:

1. ☐ Certified copies of the priority documents have been received.

2. ☐ Certified copies of the priority documents have been received in Application No. _____.

3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).

6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☐ Notice of References Cited (PTO-892)	5. ☒ Examiner's Amendment/Comment
2. ☒ Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date <u>6/1/2015</u>	6. ☐ Examiner's Statement of Reasons for Allowance
3. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material	7. ☐ Other _____.
4. ☐ Interview Summary (PTO-413), Paper No./Mail Date _____.	

	/ROBERT BEAUSOLIEL JR/ Supervisory Patent Examiner, Art Unit 2167
--	--

DETAILED ACTION

Claim Status

1. Claims 1-21 are pending.

Allowable Subject Matter

2. Claims 1-21 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter.

With respect to the independent claim 1, the prior art of record, single or in combination, does not teach or fairly suggest the step of:

"...selecting at least one data source from the plurality of data sources, the at least one data source being selected when results of the query are greater than or equal to an accuracy thresholds;

monitoring, based on a set schedule, the at least one data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof; and

establishing a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.”, in combination with the other claimed limitations.

Claim 10 and 19 recite similar limitations as claim 1 and are therefore allowed.

Dependent claims are allowed for being dependent to an already allowed claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Contact Information

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL PHAM whose telephone number is (571)272-3924. The examiner can normally be reached on 9am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Beausoliel can be reached on 571-272-3645. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

CERTIFICATION STATEMENT

Please see 37 CFR 1.97 and 1.98 to make the appropriate selection(s):

☒ That each item of information contained in the information disclosure statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(1).

OR

☐ That no item of information contained in the information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the person signing the certification after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in 37 CFR 1.56(c) more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(2).

- ☐ See attached certification statement.
- ☐ The fee set forth in 37 CFR 1.17 (p) has been submitted herewith.
- ☐ A certification statement is not submitted herewith.

SIGNATURE

A signature of the applicant or representative is required in accordance with CFR 1.33, 10.18. Please see CFR 1.4(d) for the form of the signature.

Signature	/Puya Partow-Navid/	Date (YYYY-MM-DD)	2015-06-01
Name/Print	Puya Partow-Navid	Registration Number	59657

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. **DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

1. Real-time and adaptive data mining

A method of analyzing data is presented. The method includes generating a query based on a topic of interest, expanding search terms of the query, executing the query on one or more data sources, monitoring a specific data source selected from the one or more data sources. The monitoring is...

ASSIGNMENT: RULE 14
WO2014210184A3 | WIPO APPLICATIONS | 04-JUN-2015

2. Global database management system integrating heterogeneous data sources

A database management system is disclosed for solving distributed queries across a range of resources. In known systems, database retrieval from multiple sources suffers from problems of reconciliation of data between resources and resource or data incompatibility. The invention allows full database...

ASSIGNMENT: BRITISH TELECOM PLC
WO20062080929A3 | WIPO APPLICATIONS | 13-MAR-2003

3. A privacy preserving data-mining protocol

Privacy Preserving Data-Mining Protocol, between a secure "aggregator" and "sources" having respective access to privacy-sensitive micro-data, the protocol including: the "aggregator" accepting a user query and transmitting a parameter list for that query to the "sources" (often including privacy-...

3. Retrieving Unicode Data From Databases Using Brio Query

A program is disclosed that a common solution for business intelligence (BI) tools and/or systems that require to work on multiple platforms using data stored in Unicode databases in different languages (ex : Kanji, Mandarin etc). This is a unique solution to use codepages automatically to map...

IPCOM00125967D | THE IP.COM JOURNAL | 26-JUN-2005

4. Method for migrating query languages between 2 systems using an abstract, data repository agnostic representation.

This article discusses how to define a neutral representation of a data query, independent from the type of data repository against which the query will be executed against. The fundamental architecture point is to separate the query definition from the environment it will execute on, with the goal...

IPCOM00154309D | THE IP.COM JOURNAL | 27-JUN-2007

5. Use of Rule Defined Query Partitions to Manipulate On Demand Data Access

This invention provides a method for retrieving database information via a set of configurable documents containing database query statements. This allows for easier application maintenance when source data is either unknown or volatile during the design phase of the application.

IPCOM00145733D | THE IP.COM JOURNAL | 24-JAN-2007

6. Intelligent Miner

Disclosed is a method of an Intelligent Miner architecture and a brief description of the individual components.

IPCOM00118456D | IBM TECHNICAL DISCLOSURE BULLETIN | 01-FEB-1997

7. Query Processing with Composite Data Sketches

Disclosed are a method and system for query optimization on time-series data. For indexing time-series data, the method and system use multiple data representations to provide a trade-off between errors in the query results vs. the response time of the query (accuracy vs. response time).

IPCOM00238120D | THE IP.COM JOURNAL | 07-APR-2014

8. Web Enabled SPARQL and SQL Query Generation Based on Common JSON Model

Disclosed is a query generation model, based on the JavaScript Object Notation (JSON) model, which supports visual creation of a query for enterprise data. This allows users to seamlessly switch between data sources, without having to know the complex query languages.

The screenshot displays the STC (Semantic Toolset) interface. At the top, there are tabs for 'Manage', 'Discover', and 'Map'. The 'Discover' tab is active, showing a search query 'Main Concept Text (crawler or spider) ("data mining")...' with 1 modifier and 1 filter applied. Below the search bar, there's a section for 'Views' and 'Sort' options, currently set to 'Relevance'. The results show 0 selected documents and 24 results. A 'Sample' section highlights the top 32 results. The first result is titled 'Real-time and adaptive data mining' and describes a method for analyzing data by generating queries based on topics of interest. It includes an assignment: RULE 14, US20140040301 | US APPLICATIONS | 06-FEB-2014. The second result is 'Universal database - cDB', describing a single integrated universal database for enterprises, with an assignment: SINGH, AMARJIT (+1), US20120616835 | US APPLICATIONS | 13-JAN-2012. The third result is 'Method and system for dynamic data-mining and on-line communication of customized information', with an assignment: VANDERVELDT INGRID V. (+1), US20020649704 | US APPLICATIONS | 25-APR-2002. The fourth result is 'System and method for dynamic data-mining and on-line communication of customized information', with an assignment: MANTRIA TECH INC, US6266668 | US PATENTS | 24-JUL-2001. The fifth result is 'A method and system for providing data to a user based on a user's query', with an assignment: MULTEX COM INC, GB2363640B | GREAT BRITAIN PATENTS | 29-OCT-2003. The sixth result is 'Combining multidimensional expressions and data mining extensions to mine OLAP cubes', with an assignment: MICROSOFT TECH LICENSING LLC, US20050283459 | US APPLICATIONS | 22-DEC-2005. The seventh result is 'Tools for health and wellness', with an assignment: MICROSOFT TECH LICENSING LLC, US20070112598 | US APPLICATIONS | 17-MAY-2007. The eighth result is 'System and architecture for enterprise-scale, parallel data mining'. On the right side, there are visualizations: a 'Relevance' chart showing 0 Results, a 'Publication Date' chart showing results from 2001 to 2014, and an 'Assignment by Relevance' list showing various entities and their counts.

Rank	Title	Description	Assignment
1.	Real-time and adaptive data mining	A method of analyzing data is presented. The method includes generating a query based on a topic of interest, expanding search terms of the query, executing the query on one or more data sources, monitoring a specific data source selected from the one or more data sources. The monitoring is...	RULE 14 US20140040301 US APPLICATIONS 06-FEB-2014
2.	Universal database - cDB	Cloud database is a single integrated universal database for enterprises, which provides a single database for online analytical processing (OLAP) and online transaction processing (OLTP) capabilities on the same database which stores real data. Cloud Database (cDB) can use any column oriented...	SINGH, AMARJIT (+1) US20120616835 US APPLICATIONS 13-JAN-2012
3.	Method and system for dynamic data-mining and on-line communication of customized information	A method and system for dynamically searching databases in response to a query is provided by the present invention. More specifically, a system and method for dynamic data-mining and on-line communication of customized information. This method includes the steps of first creating a search-specific...	VANDERVELDT INGRID V. (+1) US20020649704 US APPLICATIONS 25-APR-2002
4.	System and method for dynamic data-mining and on-line communication of customized information	A method and system for dynamically searching databases in response to a query is provided by the present invention. More specifically, a system and method for dynamic data-mining and on-line communication of customized information. This method includes the steps of first creating a search-specific...	MANTRIA TECH INC US6266668 US PATENTS 24-JUL-2001
5.	A method and system for providing data to a user based on a user's query		MULTEX COM INC GB2363640B GREAT BRITAIN PATENTS 29-OCT-2003
6.	Combining multidimensional expressions and data mining extensions to mine OLAP cubes	A language schema that integrates multidimensional extensions (e.g., MDX) and data mining extensions (e.g., DMX) for performing data mining operations on data residing in OLAP cubes. The schema provides that the <source-data-query> can not only be a relational query, rather a multidimensional query...	MICROSOFT TECH LICENSING LLC US20050283459 US APPLICATIONS 22-DEC-2005
7.	Tools for health and wellness	A tool for providing health and/or wellness services is described herein. Not necessarily clean or unclear data about a plurality of self-selected or non-selected or unselected subjects is received. The data can be aggregated and mined at least in part by employing a statistical algorithm, a...	MICROSOFT TECH LICENSING LLC US20070112598 US APPLICATIONS 17-MAY-2007

CERTIFICATION STATEMENT

Please see 37 CFR 1.97 and 1.98 to make the appropriate selection(s):

☒ That each item of information contained in the information disclosure statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(1).

OR

☐ That no item of information contained in the information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the person signing the certification after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in 37 CFR 1.56(c) more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(2).

- ☐ See attached certification statement.
- ☐ The fee set forth in 37 CFR 1.17 (p) has been submitted herewith.
- ☐ A certification statement is not submitted herewith.

SIGNATURE

A signature of the applicant or representative is required in accordance with CFR 1.33, 10.18. Please see CFR 1.4(d) for the form of the signature.

Signature	/Puya Partow-Navid/	Date (YYYY-MM-DD)	2015-06-01
Name/Print	Puya Partow-Navid	Registration Number	59657

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. **DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

 THE INTERNATIONAL SEARCH REPORT AND
 THE WRITTEN OPINION OF THE INTERNATIONAL
 SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Applicant's or agent's file reference 79531-000005	FOR FURTHER ACTION See paragraphs 1 and 4 below
International application No. PCT/US 14/44134	International filing date (day/month/year) 25 June 2014 (25.06.2014)
Applicant RULE 14	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith. Filing of amendments and statement under Article 19: The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46): When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report. How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70 For more detailed instructions, see PCT Applicant's Guide, International Phase, paragraphs 9.004 – 9.011. 2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith. 3. ☐ With regard to any protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that: ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices. ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made. 4. Reminders The applicant may submit comments on an informal basis on the written opinion of the International Searching Authority to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established. Shortly after the expiration of 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90bis.1 and 90bis.3). Within 19 months from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later); otherwise, the applicant must, within 20 months from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices. In respect of other designated Offices, the time limit of 30 months (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the <i>PCT Applicant's Guide, National Chapters</i>. Within 19 months from the priority date, the applicant may request that a supplementary international search be carried out by a different International Searching Authority that offers this service (Rule 45bis.1). The procedure for requesting supplementary international search is described in the <i>PCT Applicant's Guide, International Phase, paragraphs 8.006-8.032</i>.

International application No.
PCT/US 14/44134

International filing date
(day/month/year) 25 June 2014 (25.06.2014)

Applicant RULE 14

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:

The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes
1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ With regard to any protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:

☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.

☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. Reminders

The applicant may submit comments on an informal basis on the written opinion of the International Searching Authority to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

Shortly after the expiration of 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90bis.1 and 90bis.3).

Within 19 months from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later); otherwise, the applicant must, within 20 months from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices. In respect of other designated Offices, the time limit of 30 months (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

Within 19 months from the priority date, the applicant may request that a supplementary international search be carried out by a different International Searching Authority that offers this service (Rule 45bis.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 79531-000005	FOR FURTHER ACTION	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US 14/44134	International filing date (<i>day/month/year</i>) 25 June 2014 (25.06.2014)	(Earliest) Priority Date (<i>day/month/year</i>) 26 June 2013 (26.06.2013)
Applicant RULE 14		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the report

a. With regard to the language, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the rectification of an obvious mistake authorized by or notified to this Authority under Rule 91 (Rule 43.6bis(a)).

c. ☐ With regard to any nucleotide and/or amino acid sequence disclosed in the international application, see Box No. I.

2. ☐ Certain claims were found unsearchable (see Box No. II).

3. ☐ Unity of invention is lacking (see Box No. III).

4. With regard to the title,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the abstract,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the drawings,

a. the figure of the drawings to be published with the abstract is Figure No. 2

☐ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☒ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

INTERNATIONAL SEARCH REPORT

International application No.

PCT/US 14/44134

A. CLASSIFICATION OF SUBJECT MATTER

IPC(8) - G06F 7/00 (2014.01)

CPC - G06F 17/30864

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC: G06F 7/00 (2014.01),

CPC: G06F17/30864

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

USPC:(707/708 or 707/705 or 707/999.001 or 707/999.006 or 707/999.003)

IPC(8): G06F 7/00 (2014.01) ,CPC: (G06F17/30864 or G06F17/30867 or G06Q30/02 or G06F17/3089 or G06F17/30011)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

Google Scholar; Google patents; PatBase

Search Terms : analyze, data, generate, query, monitor, search engine, real time datamining, bots, extractors, natural language processors.

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X — Y	US 6,260,041 B1 (Gonzalez et al.) 10 July 2001 (10.07.2001), entire document especially col 2, ln 21-24, col 1, ln 49- 50, col 5, ln 11-15 and col 3, ln 42-46.	1 , 6, 8-10, 19 2-5, 7, 11-18, 20-21
Y	US 2012/0150645 A1 (Mandyam et al.) 14 June 2012 (14.06.2012) entire document especially col 3, ln 38-45, col 4, ln 21-24,col 5 and ln 31-40.	2-3, 11-18, 20
Y	US 2005/0283473 A1 (Rousso et al.) 22 December 2005 (22.12.2005) entire document especially paragraphs [0024], [0075], [0079], para [0066], para [0077] and para [0120].	4, 5, 7, 13, 14, 16 and 21

☐ Further documents are listed in the continuation of Box C.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family

Date of the actual completion of the international search

Applicant RULE 14

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☐ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. FURTHER ACTION

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1 bis(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.

PCT/US 14/44134

Box No. I Basis of this opinion

1. With regard to the language, this opinion has been established on the basis of:
 - ☒ the international application in the language in which it was filed.
 - ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).
2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))
3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:
 - a. (means)
 - ☐ on paper
 - ☐ in electronic form
 - b. (time)
 - ☐ in the international application as filed
 - ☐ together with the international application in electronic form
 - ☐ subsequently to this Authority for the purposes of search
4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.
5. Additional comments:

PCT/US 14/44134

Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	2-5, 7, 11-18, 20-21	YES
	Claims	1, 6, 8-10, 19	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-21	NO
Industrial applicability (IA)	Claims	1-21	YES
	Claims	None	NO

2. Citations and explanations:

Claims 1, 6, 8-10 and 19 lack novelty under PCT Article 33(2) as being anticipated by US 6,260,041 B1 to Gonzalez et al (hereinafter "Gonzalez").

Regarding claim 1, Gonzalez discloses a method of analyzing data (col 2, in 21-24, a monitoring and retrieval apparatus and (corresponding method) is embodied in a fast Internet real-time search technology (FIRST) system, as illustrated in FIG. 1.), comprising: generating a query based at least in part on a topic of interest (col 1, in 49- 50, inputting and editing a list of desired search terms, and a list of resource locations to be monitored.); expanding search terms of the query (col 2, in 50- 54, in the client file therefore the user could enter the company name Oracle. or Oracle Corporation. as its desired search terms, together with any additional search terms such as the stock symbol .ORCL.); executing the query on a plurality of data sources (col 5, in 11-15, the invention may easily be deployed to monitor other communication networks (e.g., intranets, private bulletin boards, individual local or wide area networks, proprietary chat rooms, ICQ, IRC channels, instant messaging systems, ThirdVoice postings, etc.); and monitoring at least one specific data source selected from the plurality of data sources for matches to the query (col 3, in 42-46 In operation, the illustrated embodiment described above allows the FIRST system to monitor and retrieve information from one or more predetermined resources in accordance with the operational flow depicted in FIG. 3 in (steps S30 through S38).

Regarding claim 6, Gonzalez discloses a method and an apparatus, in which the plurality of data sources include open source data sources that are publically available and closed-source data sources that are not publically accessible (col 5, in 11-15, the invention may easily be deployed to monitor other communication networks (e.g., intranets, private bulletin boards, individual local or Wide area networks, proprietary chat rooms, ICQ, IRC channels, instant messaging systems, ThirdVoice postings, etc).

Regarding claim 8, Gonzalez discloses a method and an apparatus in which the plurality of data sources are pre-defined (col 3, in 42-46, in operation, the illustrated embodiment described above allows the FIRST system to monitor and retrieve information from one or more predetermined resources in accordance with the operational flow depicted in FIG. 3 in (steps S30through S38)).

Regarding claim 9, Gonzalez discloses an apparatus in which the at least one processor is further configured to deploy extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source (col 3, in 13- 20 In the preferred embodiment, a single bot is assigned to perform a single script in the script directory 16, although other embodiments could permit multiple scripts being executed by a single bot (or a single script being executed by multiple bots), as desired. Each bot is preferably programmed uniquely in accordance with the tasks required).

Regarding claim 10, Gonzalez discloses an apparatus configured to analyze data (col 2, in 21-24, a monitoring and retrieval apparatus and (corresponding method) is embodied in a fast Internet real-time search technology (FIRST) system, as illustrated in FIG. 1.), the apparatus comprising: a memory unit; and at least one processor coupled to the memory unit, in which the at least one processor is configured (col 2, in 37-40, As illustrated in FIG. 2, a central processing unit (CPU) 20 is provided for execution of one or more computer programs stored in a recording medium such as memory 22): to generate a query based at least in part on a topic of interest (col 1, in 49- 50, inputting and editing a list of desired search terms, and a list of resource locations to be monitored.); to expand search terms of the query (col 2, in 50- 54, in the client file therefore the user could enter the company name .Oracle. or .Oracle Corporation. as its desired search terms, together with any additional search terms such as the stock symbol .ORCL.); to execute the query on a plurality of data sources (col 5, in 11-14, the invention may easily be deployed to monitor other communication networks (e.g., intranets, private bulletin boards, individual local or wide area networks, proprietary chat rooms, ICQ, IRC channels, instant messaging systems, ThirdVoice postings, etc.); and to monitor at least one specific data source selected from the plurality of data sources for matches to the query (col 3, in 42-46 In operation, the illustrated embodiment described above allows the FIRST system to monitor and retrieve information from one or more predetermined resources in accordance with the operational flow depicted in FIG. 3 in (steps S30 through S38).

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.

PCT/US 14/44134

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Box V, 2: Citations and Explanations:

Regarding claim 19, Gonzalez discloses a computer program product for data analysis (col 5, in 39-45, Indeed, even a single general purpose computer executing a computer program stored on a recording medium to produce the functionality and any other memory devices referred to herein may be utilized to implement the illustrated embodiments), the computer program product comprising: a non-transitory computer-readable medium having program code recorded thereon (col 2, in 37-40, As illustrated in FIG. 2, a central processing unit (CPU) 20 is provided for execution of one or more computer programs stored in a recording medium such as memory 22.); the program code comprising program code to generate a query based at least in part on a topic of interest (col 1, in 49- 50, inputting and editing a list of desired search terms, and a list of resource locations to be monitored.); program code to expand search terms of the query (col 2, in 50- 54, In the client file therefore the user could enter the company name .Oracle. or .Oracle Corporation, as its desired search terms, together with any additional search terms such as the stock symbol .ORCL.); program code to execute the query on a plurality of data sources (col 5, in 11-15 the invention may easily be deployed to monitor other communication networks (e.g., intranets, private bulletin boards, individual local or wide area networks, proprietary chat rooms, ICQ, IRC channels, instant messaging systems, ThirdVoice postings, etc.); and program code to monitor at least one specific data source selected from the plurality of data sources for matches to the query (col 3, in 42-46 In operation, the illustrated embodiment described above allows the FIRST system to monitor and retrieve information from one or more pre-determined resources in accordance with the operational flow depicted in FIG. 3 in (steps S30 through S38).

Claims 2, 3, 11, 12, 15, 17-18 and 20 lack an inventive step under PCT Article 33(3) as being obvious over Gonzalez in view of US 2012/0150645 A1 to Mandyam et al. (hereinafter 'Mandyam').

Regarding claim 2, Gonzalez discloses a method further comprising extracting data from the at least one monitored specific data source (col 1, in 44-48, method of monitoring and retrieving identifiable statements and other information pertinent to one or more desired search terms or concepts); analyzing the extracted data (col 1, in 50-58, A server causes the periodic access of each resource location listed to determine whether any information on a particular resource location has been added that is pertinent to the desired search terms since the previous visit to the location. Any added information is returned to the server for processing. An alert message can be generated and forwarded to an intended recipient to alert the recipient of the added information).

Gonzalez does not expressly disclose establishing a communication channel with a user based at least in part on the analyzed data; and receiving feedback from the user based at least in part on the generated feedback. However, Mandyam does teach establishing a communication channel (para [0017], Then the system 10 according to aspects of an embodiment of the disclosed subject matter, can send to selected users (which could be all users or a sub-set of all users) in the target market, represented illustratively only by wireless remote units 20 a and 20 b along with wireless remote units 24 a and 24 b and computers 76 a-c, an advertisement, e.g., a display advertisement for sushi restaurants) with a user based at least in part on the analyzed data; (para [0020], Such granularity may be selected or dictated by an analysis of the incoming accessing requests and the then current location(s) of the users seeking such accessing (i.e., by conducting a search, by utilizing a link, or otherwise logging-on to a pertinent web-site or web-page, etc.) and receiving feedback from the user based at least in part on the generated feedback (para [0025], This may be done in an ongoing fashion, such that, if only a relatively small number of users are reacting to the delivery of the advertisement in a certain geographic area, or after the passage of some measurable time, or over a certain selected media, then the delivery of the advertisement could be modified or cancelled where it is being demonstrated to not be effective or be relatively less effective. Similarly positive user feedback information could lead to extending the target market 30, geographically, temporally or otherwise). It would have been obvious to one of ordinary skill in the art to modify the method of Gonzalez to use the communication channel and feedback system as in Mandyam because it allows more relevant results to be provided to the user.

Regarding claim 3, Gonzalez discloses a method further comprising visualizing at least the extracted data, the analyzed data, or a combination thereof. (col 2, in 28- 30, Maximilian server 12 receives inputs and delivers output to users through user interface).

Regarding claim 11, Gonzalez discloses an apparatus in which the at least one processor is further configured: to extract data from the at least one monitored specific data source (col 1, in 44-48, method of monitoring and retrieving identifiable statements and other information pertinent to one or more desired search terms or concepts); to analyze the extracted data (col 1, in 50-58, A server causes the periodic access of each resource location listed to determine whether any information on a particular resource location has been added that is pertinent to the desired search terms since the previous visit to the location. Any added information is returned to the server for processing. An alert message can be generated and forwarded to an intended recipient to alert the recipient of the added information);

Gonzalez does not expressly disclose establishing a communication channel with a user based at least in part on the analyzed data; and receiving feedback from the user based at least in part on the generated feedback. However, Mandyam does teach to establish a communication channel (para [0017], Then the system 10 according to aspects of an embodiment of the disclosed subject matter, can send to selected users (which could be all users or a sub-set of all users) in the target market, represented illustratively only by wireless remote units 20 a and 20 b along with wireless remote units 24 a and 24 b and computers 76 a-c, an advertisement, e.g., a display advertisement for sushi restaurants) with a user based at least in part on the analyzed data; and to receive feedback from the user based at least in part on the generated feedback(para [0025], This may be done in an ongoing fashion, such that, if only a relatively small number of users are reacting to the delivery of the advertisement in a certain geographic area, or after the passage of some measurable time, or over a certain selected media, then the delivery of the advertisement could be modified or cancelled where it is being demonstrated to not be effective or be relatively less effective. Similarly positive user feedback information could lead to extending the target market 30, geographically, temporally or otherwise). It would have been obvious to one of ordinary skill in the art to modify apparatus of Gonzalez to use the communication channel and feedback system as in Mandyam because more relevant results to be provided to the user.

Regarding claim 12, Gonzalez discloses an apparatus in which the at least one processor is further configured to visualize at least the extracted data, the analyzed data, or a combination thereof. (col 2, in 28- 30, Maximilian server 12 receives inputs and delivers output to users through user interface).

-Continuation in Supplemental Box-

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US 14/44134

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Regarding claim 15, Gonzalez teaches an apparatus in which the plurality of data sources include opensource data sources that are publically available and closed-source data sources that are not publically accessible. (col 5, in 11-15, the invention may easily be deployed to monitor other communication networks (e.g., intranets, private bulletin boards, individual local or Wide area networks, proprietary chat rooms, ICQ, IRC channels, instant messaging systems, ThirdVoice postings, etc.).

Regarding claim 17, Gonzalez teaches an apparatus, in which the plurality of data sources are predefined (col 3, in 42-46, in operation, the illustrated embodiment described above allows the FIRST system to monitor and retrieve information from one or more predetermined resources in accordance with the operational flow depicted in FIG. 3 in (steps S30through S38)).

Regarding claim 18, Gonzalez discloses an apparatus, in which the at least one processor is further configured to deploy extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source (col 3, in 13- 20 in the preferred embodiment, a single bot is assigned to perform a single script in the script directory16, although other embodiments could permit multiple scripts being executed by a single bot (or a single script being executed by multiple bots), as desired. Each bot is preferably programmed uniquely in accordance with the tasks required).

Regarding claim 20, Gonzalez discloses a computer program, further comprising: program code to extract data from the at least one monitored specific data source (col 1, in 44-48, method of monitoring and retrieving identifiable statements and other information pertinent to one or more desired search terms or concepts); program code to analyze the extracted data (col 1, in 50 -58, A server causes the periodic access of each resource location listed to determine whether any information on a particular resource location has been added that is pertinent to the desired search terms since the previous visit to the location. Any added information is returned to the server for processing. An alert message can be generated and forwarded to an intended recipient to alert the recipient of the added information);

Gonzalez does not expressly disclose a program code to establish a communication channel with a user based at least in part on the analyzed data; and program code to receive feedback from the user based at least in part on the generated feedback.

However, Mandyam does teach a program code to establish a communication channel (para [0017], Then the system10 according to aspects of an embodiment of the disclosed subject matter, can send to selected users (which could be all users or a sub-set of all users) in the target market, represented illustratively only by wireless remote units 20 a and 20 b along with wireless remote units 24 a and 24 b and computers 76 a-c, an advertisement, e.g., a display advertisement for sushi restaurants) with a user based at least in part on the analyzed data; (para [0020], Such granularity may be selected or dictated by an analysis of the incoming accessing requests and the then current location(s) of the users seeking such accessing (i.e., by conducting a search, by utilizing a link, or otherwise logging-on to a pertinent web-site or web-page, etc.) and receiving feedback from the user based at least in part on the generated feedback (para [0025], This may be done in an ongoing fashion, such that, if only a relatively small number of users are reacting to the delivery of the advertisement in a certain geographic area, or after the passage of some measurable time, or over a certain selected media, then the delivery of the advertisement could be modified or cancelled where it is being demonstrated to not be effective or be relatively less effective. Similarly positive user feedback information could lead to extending the target market 30, geographically, temporally or otherwise). It would be obvious to one of ordinary skill in the art to modify disclosure of Gonzalez to use the communication channel and feedback system as in Mandyam because more relevant results would be provided to the user.

Claims 4, 5, 7 and 21 lack an inventive step under PCT Article 33(3) as being obvious over Gonzalez in view of US 2005/0283473 A1 to Rouso et al (hereinafter 'Rouso').

Regarding claim 4, Gonzalez discloses a method in which expanding the query comprises expanding the search terms (col 2, in 50- 54, In the client file therefore the user could enter the company name .Oracle. or .Oracle Corporation. as its desired search terms, together with any additional search terms such as the stock symbol .ORCL.). Gonzalez fails to expressly disclose including at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof.

However, Rouso does teach a method, in which expanding the query comprises expanding the search terms (para [0024], The AIDS A augments and expands a searcher's vocabulary by producing related keyword query terms that may be more suited to what the user is actually looking for) to include at least misspellings (para[0075], These related query terms 490 are provided and alternative spellings may be provided for the query terms as well as the common misspelling of those Words), synonyms, sub-topics (para [0059], In an alternative embodiment, the query may be comprised of metadata keywords in the web page or it may be based on just the title of the web site article.), antonyms, or a combination thereof (para [0079], In alternative embodiments, hypernyms, hyponyms, antonyms, proximate coordinate terms, etc. are used as the basis of lookups in the related Word database to further expand identification of related Words. Upon expending their original keyword terms 465, that query 465 is combined with any alternative spellings 480 and/or partial Words 490 and provided to the data selector). It would have been obvious to one of ordinary skill in the art to add Rouso's method of expansion of queries comprising expanding the search terms to include at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof to Gonzalez query expansion involving expanding the search terms because it would allow a thorough search to conducted and provide more accurate results.

Regarding claims 5 and 21, Gonzalez discloses the monitoring is performed to monitor for matches to a query(col 3,in 42-46 in operation, the illustrated embodiment described above allows the FIRST system to monitor and retrieve information from one or more predetermined resources in accordance with the operational flow depicted in FIG. 3 in (steps S30 through S38), but fails to disclose refining the search terms based at least in part on the executed query; and a refined query. However, Rouso does teach refining the search terms based at least in part on the executed query and a refined query (para [0066], in one embodiment, as the user changes emphasis values, the query is continually being reexecuted based on the varied emphasis values, and search results are changed and shown to the user interactively). It would have been obvious to one of ordinary skill in the art to add Rouso's method of re-executing the query based on the refinement made to the search terms to Gonzalez's method of monitoring matches of a query because it would help the user to be aware of updates to the information he has searched using further refinement of the query.

-Continuation in Next Supplemental Box-

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US 14/44134

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

-Continuation in Preceding Supplemental Box-

Regarding claim 7, Gonzalez fails to disclose a method, in which the query is a natural language query. However Rouso does teach a method, in which the query is a natural language query (para [0077]. Further, word order can help the determine the grammatical type of the word. For example, if the search query is .reviews that run cars with liquid fuel, then the word .run. would be interpreted to more likely be a verb as it is in the middle of the supplied query. In an example where the search is .the run that caused people to get very tired. the AIDA would interpret .run. top be a noun as it is towards the beginning of the query where the subject is typically specified. As such, word order can provide greater context and emphasis to provided queries), and further comprising translating the query to a system understood language. (para [0120], entries made into supplied fields in the Web form are tagged as having been entered into the particular fields, and parsed as such. The entered terms are then passed along with the field tags, which act to instruct the parser to generate queries directed to appropriate tables and/or fields. In one embodiment, the parser may generate queries in standard SQL by instantiating a search string with the proper join/select commands based on the tagged text entries, wherein the resulting command is provided over the bridge mechanism to the AIDSA as a query. Upon generating query results from the query, the results are passed over the bridge mechanism, and may be parsed for formatting and generation of new results Web page by the bridge mechanism. Such a new results Web page is then provided to the information server, which may supply it to the requesting Web browser). It would be obvious to one of ordinary skill in the art to modify Gonzalez to use a natural language query and translate the query to a system understood language as taught by Rouso.s use of natural language query for searching and translating the query to a system understood language by using a parser which may generate queries in standard SQL because it will help the user to use natural languages while searching to make searching easier and convenient.

Claims 13, 14 and 16 lack an inventive step under PCT Article 33(3) as being obvious over Gonzalez in view of Mandyam and further in view of Rouso.

Regarding claim 13, Gonzalez discloses an apparatus in which expanding the query comprises expanding the search terms (col 2, in 50-54. In the client file therefore the user could enter the company name .Oracle. or .Oracle Corporation. as its desired search terms, together with any additional search terms such as the stock symbol .ORCL.). Gonzalez and Mandyam fail to expressly disclose including at least misspellings, synonyms, sub-topics, antonyms, or a combination.

However, Rouso does teach an apparatus, in which expanding the query comprises expanding the search terms (para [0024]. The AIDSA augments and expands a searcher's vocabulary by producing related keyword query terms that may be more suited to what the user is actually looking for) to include at least misspellings (para[0075]. These related query terms 490 are provided and alternative spellings may be provided for the query terms as well as the common misspelling of those Words), synonyms, sub-topics (para [0059]. In an alternative embodiment, the query may be comprised of metadata keywords in the web page or it may be based on just the title of the web site article.), antonyms, or a combination thereof (para [0079]. In alternative embodiments, hypernyms, hyponyms, antonyms, proximate coordinate terms, etc. are used as the basis of lookups in the related Word database to further expand identification of related Words. Upon expanding their original keyword terms 465, that query 465 is combined with any alternative spellings 480 and/or partial Words 490 and provided to the data selector). It would have been obvious to one of ordinary skill in the art to add Rouso's expansion of queries comprising expanding the search terms to include at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof to Gonzalez and Mandyam because query expansion involving expanding the search terms would conduct a thorough search and provide more accurate results.

Regarding claim 14, Gonzalez discloses the monitoring is performed to monitor for matches to a query(col 3, in 42-46 In operation, the illustrated embodiment described above allows the FIRST system to monitor and retrieve information from one or more predetermined resources in accordance with the operational flow depicted in FIG. 3 in (steps S30 through S38). Gonzalez and Mandyam fail to disclose refining the search terms based at least in part on the executed query; and a refined query. However, Rouso does teach refining the search terms based at least in part on the executed query and a refined query (para [0066]. In one embodiment, as the user changes emphasis values, the query is continually being reexecuted based on the varied emphasis values, and search results are changed and shown to the user interactively). It would have been obvious to one of ordinary skill in the art to add Rouso's method of re-executing the query based on the refinement made to the search terms to Gonzalez and Mandyam method of monitoring matches of a query because it would help the user to be aware of updates to the information he has searched using further refinement of the query.

Regarding claim 16, Gonzalez in combination with Mandyam fail to disclose an apparatus, in which the query is a natural language query and in which the at least one processor is further configured to translate the query to a system understood language.

However Rouso does teach an apparatus, in which the query is a natural language query (para [0077]. Further, word order can help the determine the grammatical type of the word. For example, if the search query is .reviews that run cars with liquid fuel, then the word .run. would be interpreted to more likely be a verb as it is in the middle of the supplied query. In an example where the search is .the run that caused people to get very tired. the AIDA would interpret .run. top be a noun as it is towards the beginning of the query where the subject is typically specified. As such, word order can provide greater context and emphasis to provided queries), and in which the at least one processor is further configured to translate the query to a system understood language(para [0120], entries made into supplied fields in the Web form are tagged as having been entered into the particular fields, and parsed as such. The entered terms are then passed along with the field tags, which act to instruct the parser to generate queries directed to appropriate tables and/or fields. In one embodiment, the parser may generate queries in standard SQL by instantiating a search string with the proper join/select commands based on the tagged text entries, wherein the resulting command is provided over the bridge mechanism to the AIDSA as a query. Upon generating query results from the query, the results are passed over the bridge mechanism, and may be parsed for formatting and generation of new results Web page by the bridge mechanism. Such a new results Web page is then provided to the information server, which may supply it to the requesting Web browser). It would have been obvious to one of ordinary skill in the art to modify Gonzalez in combination with Mandyam to use a natural language query and translate the query to a system understood language as taught by Rouso's use of natural language query for searching and translating the query to a system understood language by using a parser which may generate queries in standard SQL because it will help the user to use natural languages while searching to make searching easier and convenient.

Claims 1-21 have industrial applicability as defined by PCT Article 33(4) because the subject matter can be made or used in industry.

REPLY UNDER 37 C.F.R. 1.111

Dear Sir:

In response to the Office Action dated February 3, 2014, reconsideration and further examination of the above-identified application are respectfully requested based on the following:

Amendments to the Claims are reflected in the listing of claims, which begin on page 2 of this paper.

Remarks begin on page 7 of this paper.

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of analyzing data, comprising:
generating, via a first user, a query based at least in part on a topic of interest;
expanding search terms of the query;
executing the query on a plurality of data sources; [[and]]
selecting at least one data source from the plurality of data sources, the at least one data source being selected when results of the query are greater than or equal to an accuracy thresholds;
monitoring, based on a set schedule, the at least one ~~specific~~ data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof~~selected from the plurality of data sources for matches to the query;~~ and
establishing a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.
2. (Currently Amended) The method of claim 1, further comprising
~~extracting data from the at least one monitored specific data source;~~
analyzing the extracted data;
~~establishing a communication channel with a user based at least in part on the analyzed data;~~ and
receiving feedback from the user based at least in part on the established communication channel~~generated feedback.~~
3. (Original) The method of claim 2, further comprising visualizing at least the extracted data, the analyzed data, or a combination thereof.

4. (Original) The method of claim 1, in which expanding the query comprises expanding the search terms to include at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof.

5. (Original) The method of claim 1, further comprising:
refining the search terms based at least in part on the executed query, and in which the monitoring is performed to monitor for matches to a refined query.

6. (Original) The method of claim 1, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that are not publically accessible.

7. (Original) The method of claim 1, in which the query is a natural language query, and
further comprising translating the query to a system understood language.

8. (Original) The method of claim 1, in which the plurality of data sources are pre-defined.

9. (Original) The method of claim 1, in which the monitoring comprises deploying extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source.

10. (Currently Amended) An apparatus configured to analyze data, the apparatus comprising:

a memory unit; and

at least one processor coupled to the memory unit, in which the at least one processor is configured:

to generate, via a first user, a query based at least in part on a topic of interest;

to expand search terms of the query;

to execute the query on a plurality of data sources; [[and]]

to select at least one data source from the plurality of data sources, the at least one data source being selected when results of the query are greater than or equal to an accuracy thresholds;

to monitor, based on a set schedule, the at least one ~~specific~~ data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof selected from the plurality of data sources for matches to the query; and

to establish a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.

11. (Currently Amended) The apparatus of claim 10, in which the at least one processor is further configured:

~~to extract data from the at least one monitored specific data source;~~

to analyze the extracted data;

~~to establish a communication channel with a user based at least in part on the analyzed data; and~~

to receive feedback from the user based at least in part on the established communication channel-generated feedback.

12. (Original) The apparatus of claim 11, in which the at least one processor is further configured to visualize at least the extracted data, the analyzed data, or a combination thereof.

13. (Original) The apparatus of claim 11, in which the at least one processor is further configured to expand the search terms to include at least misspelling, synonyms, sub-topics, antonyms, or a combination thereof.

14. (Original) The apparatus of claim 11, in which the at least one processor is further configured:

to refine the search terms based at least in part on the executed query, and

to monitor for matches to a refined query.

15. (Original) The apparatus of claim 11, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that are not publically accessible.

16. (Original) The apparatus of claim 11, in which the query is a natural language query, and
in which the at least one processor is further configured to translate the query to a system understood language.

17. (Original) The apparatus of claim 11, in which the plurality of data sources are pre-defined.

18. (Original) The apparatus of claim 11, in which the at least one processor is further configured to deploy extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source.

19. (Currently Amended) A computer program product for data analysis, the computer program product comprising:

a non-transitory computer-readable medium having program code recorded thereon, the program code comprising:

program code to generate, via a first user, a query based at least in part on a topic of interest;

program code to expand search terms of the query;

program code to execute the query on a plurality of data sources; [[and]]

program code to select at least one data source from the plurality of data sources, the at least one data source being selected when results of the query are greater than or equal to an accuracy thresholds;

program code to monitor, based on a set schedule, the at least one specific data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof selected from the plurality of data sources for matches to the query; and

program code to establish a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.

20. (Currently Amended) The computer program of claim 19, further comprising:
~~program code to extract data from the at least one monitored specific data source;~~
program code to analyze the extracted data;
~~program code to establish a communication channel with a user based at least in part on the analyzed data; and~~
program code to receive feedback from the user based at least in part on the established communication channel-generated feedback.

21. (Original) The computer program of claim 19, further comprising:
program code to refine the search terms based at least in part on the executed query, and
program code to monitor for matches to a refined query.

REMARKS

In response to the Office Action dated February 3, 2015, the Office Action's claim rejections have been considered. Claims 1-21 are pending. No new matter is added. Support for the amendments may be found in the specification as originally filed. Applicants respectfully traverse all rejections of all pending claims and earnestly solicit allowance of these claims.

Telephonic Interview Summary

Applicants express their appreciation to the Examiner for discussing the present application on April 13, 2015. During the interview, applicants' representative discussed the present amendments in view of the cited references. The Examiner stated that the present amendments appear to overcome the current rejections. Still, the Examiner stated that a further search is necessary.

Claim Rejections - 35 USC § 112

Claims 2, 11, and 20 are rejected under 35 U.S.C. § 112, second paragraph, because the limitation "the generated feedback" has insufficient antecedent basis.

Applicants have amended claim 2 to recite "the established communication channel." In view of the amendments to claims 2, 11, and 20, applicants respectfully request for the withdrawal of the rejections to claims 2, 11, and 20 under 35 U.S.C. § 112.

Claim Rejections - 35 USC § 102

Claims 1-21 are rejected under pre-AIA 35 U.S.C. § 102(e) as allegedly being anticipated by Myaeng at al. (U.S. Patent Application Publication No. 2011/0047161). Applicants respectfully traverse these rejections and reconsideration and withdrawal of these rejections are respectfully requested.

As amended, claim 1 recites, in part, monitoring, based on a set schedule, the at least one data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof, and

establishing a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.

Pages 3-4 of the Office Action states that paragraph 52 and FIGURE 1 of Myaeng disclose monitoring at least one specific data source for matches to a query. Applicants provide the following remarks.

As stated on page 3 of the Office Action, paragraph 52 of Myaeng discloses that the user determines whether a document is relevant to a query. In contrast, claim 1 recites “monitoring, based on a schedule, the at least one data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof.”

As discussed during the interview, Myaeng is only directed to determining if a document is relevant and is silent on monitoring the data source to extract data from the data source when new data or updated data matches the query. Therefore, applicants submit that Myaeng fails to teach or suggest the “monitoring, based on a set schedule, the at least one data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof,” as recited in claim 1.

Furthermore, as amended, claim 1 incorporates elements similar to those recited in original claim 2. Specifically, as amended, claim 1 recites, in part, establishing a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.

For claim 2, page 4 of the Office Action states that paragraph 58 of Myaeng discloses establishing a communication channel with a user based at least in part on the analyzed data. Applicants provide the following remarks.

The cited portion of Myaeng is directed to generating a query. In contrast, the cited portion of claim 1 is directed to establishing a communication channel with an second user, the second user is different from the first user that generated the query. As discussed during the interview, establishing a communication channel with a user, as recited in claim 1, is patentably distinguishable from classifying a query, as discussed in paragraph 58 of Myaeng. Therefore,

because Myaeng is silent on establishing a communication channel with a user based at least in part on the data extracted from the at least one monitored data source, applicants submit that Myaeng fails to teach or suggest the cited elements of claim 1.

Finally, applicants have reviewed Myaeng and have found no discussion for “selecting at least one data source from the plurality of data sources, the at least one data source being selected when results of the query are greater than or equal to an accuracy thresholds,” as recited in claim 1. Therefore, because Myaeng is silent on the cited element of claim 1, applicants submit that Myaeng fails to teach or suggest the cited element of claim 1.

Applicants have demonstrated above that Myaeng fails to teach or suggest various elements recited in claim 1. Therefore, claim 1 is believed to be allowable over Myaeng. Additionally, the other independent claims recited elements similar to those discussed for claim 1 and are believed to be allowable for reasons similar to those discussed for claim 1. Finally, the rejected dependent claims are allowable at least by virtue of their dependence on an allowable base claim, in addition to reasons related to their own recitations.

CONCLUSION

The absence of a reply to a specific rejection, issue, or comment does not signify agreement with or concession of that rejection, issue, or comment. In addition, because the arguments above may not be exhaustive, there may be other reasons for patentability of any or all claims that have not been expressed. Finally, nothing in this paper should be construed as an intent to concede any issue with regard to any claim, except as specifically stated in this paper, and the amendment or cancellation of any claim does not necessarily signify concession of unpatentability of the claim prior to its amendment or cancellation.

In light of the amendments and remarks, applicants submit that the claims are in condition for allowance and respectfully request a notice to this effect. Should the Examiner have any questions, please call the undersigned at the phone number listed below.

To the extent necessary, a petition for an extension of time under 37 C.F.R. § 1.136 is submitted. Please charge any shortage in fees due in connection with the filing of this paper, including extension of time fees, to Deposit Account 50-2291 and please credit any excess fees to such deposit account.

Dated: May 4, 2015

Respectfully submitted,

By: /Puya Partow-Navid/

<i>Applicant-Initiated Interview Summary</i>	Application No. 13/928,313	Applicant(s) CHADHA ET AL.	
	Examiner MICHAEL PHAM	Art Unit 2167	

All participants (applicant, applicant's representative, PTO personnel):

(1) MICHAEL PHAM. (3) Puya Partow-Navid (reg. 59657).

(2) _____. (4) _____.

Date of Interview: 13 April 2015.

Type: ☒ Telephonic ☐ Video Conference
 ☐ Personal [copy given to: ☐ applicant ☐ applicant's representative]

Exhibit shown or demonstration conducted: ☐ Yes ☐ No.
 If Yes, brief description: _____.

Issues Discussed ☐101 ☐112 ☐102 ☐103 ☒Others
 (For each of the checked box(es) above, please describe below the issue and detailed description of the discussion)

Claim(s) discussed: proposed.

Identification of prior art discussed: Myaeng.

Substance of Interview
 (For each issue discussed, provide a detailed description and indicate if agreement was reached. Some topics may include: identification or clarification of a reference or a portion thereof, claim interpretation, proposed amendments, arguments of any applied references etc...)

Applicant's representative discussed in brief the application with respect to figure 1. Applicant's representative discussed the proposed amendments as provided in the proposed remarks. It was suggested to amend the claim to indicate that it's a set schedule. It was indicated that the amendments discussed would appear to overcome the cited portions of the references. While proposed amendments were discussed, no agreement was yet reached. Applicant's are advised to file a formal response for further consideration and/or search.

Applicant recordation instructions: The formal written reply to the last Office action must include the substance of the interview. (See MPEP section 713.04). If a reply to the last Office action has already been filed, applicant is given a non-extendable period of the longer of one month or thirty days from this interview date, or the mailing date of this interview summary form, whichever is later, to file a statement of the substance of the interview

Examiner recordation instructions: Examiners must summarize the substance of any interview of record. A complete and proper recordation of the substance of an interview should include the items listed in MPEP 713.04 for complete and proper recordation including the identification of the general thrust of each argument or issue discussed, a general indication of any other pertinent matters discussed regarding patentability and the general results or outcome of the interview, to include an indication as to whether or not agreement was reached on the issues raised.

/MICHAEL PHAM/ Examiner, Art Unit 2167	
---	--

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) § 1.133 Interviews

Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiner's responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicant's correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicant's record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiner's version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, "Interview Record OK" on the paper recording the substance of the interview along with the date and the examiner's initials.

PATENT
Docket No.: 79531-2

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Patent Application of: Sharon Gill Chadha et al.	Customer No.: 98275
Application No.: 13/928,313	Art Unit: 2167
Filed: June 26, 2013	Confirmation No.: 2955
For: REAL-TIME AND ADAPTIVE DATA MINING	Examiner: MICHAEL PHAM

Dear Sir:

The following is an agenda for the Examiner interview scheduled for April 13 at 1 PM
(Eastern).

Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A method of analyzing data, comprising:
generating, via a first user, a query based at least in part on a topic of interest;
expanding, via the first user, search terms of the query;
executing, via the first user, the query on a plurality of data sources; ~~and~~
selecting, via the first user, at least one data source from the plurality of data sources, the
at least one data source being selected when results of the query are greater than or equal to an
accuracy thresholds;
monitoring, via the first user based on a schedule, the at least one specific data source to
extract data from the at least one data source when at least an update to stored data that matches
the query, newly added data that matches the query, or a combination thereof selected from the
plurality of data sources for matches to the query; and
establishing, via the first user, a communication channel with a second user based at least
in part on the data extracted from the at least one monitored data source.
2. (currently amended) The method of claim 1, further comprising
~~extracting data from the at least one monitored specific data source;~~
analyzing the extracted data;
~~establishing a communication channel with a user based at least in part on the analyzed~~
~~data; and~~
receiving feedback from the user based at least in part on the established communication
channel generated feedback.

[the other claims will be amended similar to claims 1 and 2]

3. The method of claim 2, further comprising visualizing at least the extracted data, the analyzed data, or a combination thereof.

4. The method of claim 1, in which expanding the query comprises expanding the search terms to include at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof.

5. The method of claim 1, further comprising:
refining the search terms based at least in part on the executed query, and in which the monitoring is performed to monitor for matches to a refined query.

6. The method of claim 1, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that are not publically accessible.

7. The method of claim 1, in which the query is a natural language query, and further comprising translating the query to a system understood language.

8. The method of claim 1, in which the plurality of data sources are pre-defined.

9. The method of claim 1, in which the monitoring comprises deploying extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source.

10. An apparatus configured to analyze data, the apparatus comprising:
a memory unit; and
at least one processor coupled to the memory unit, in which the at least one processor is configured:

to generate a query based at least in part on a topic of interest;
to expand search terms of the query;
to execute the query on a plurality of data sources; and
to monitor at least one specific data source selected from the plurality of data sources for matches to the query.

11. The apparatus of claim 10, in which the at least one processor is further configured:
- to extract data from the at least one monitored specific data source;
 - to analyze the extracted data;
 - to establish a communication channel with a user based at least in part on the analyzed data; and
 - to receive feedback from the user based at least in part on the generated feedback.
12. The apparatus of claim 11, in which the at least one processor is further configured to visualize at least the extracted data, the analyzed data, or a combination thereof.
13. The apparatus of claim 11, in which the at least one processor is further configured to expand the search terms to include at least misspelling, synonyms, sub-topics, antonyms, or a combination thereof.
14. The apparatus of claim 11, in which the at least one processor is further configured:
- to refine the search terms based at least in part on the executed query, and
 - to monitor for matches to a refined query.
15. The apparatus of claim 11, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that are not publically accessible.
16. The apparatus of claim 11, in which the query is a natural language query, and in which the at least one processor is further configured to translate the query to a system understood language.
17. The apparatus of claim 11, in which the plurality of data sources are pre-defined.

18. The apparatus of claim 11, in which the at least one processor is further configured to deploy extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source.

19. A computer program product for data analysis, the computer program product comprising:

a non-transitory computer-readable medium having program code recorded thereon, the program code comprising:

- program code to generate a query based at least in part on a topic of interest;
- program code to expand search terms of the query;
- program code to execute the query on a plurality of data sources; and
- program code to monitor at least one specific data source selected from the plurality of data sources for matches to the query.

20. The computer program of claim 19, further comprising:

- program code to extract data from the at least one monitored specific data source;
- program code to analyze the extracted data;
- program code to establish a communication channel with a user based at least in part on the analyzed data; and
- program code to receive feedback from the user based at least in part on the generated feedback.

21. The computer program of claim 19, further comprising:

- program code to refine the search terms based at least in part on the executed query, and
- program code to monitor for matches to a refined query.

REMARKS***Claim Rejections - 35 USC § 112)***

Claims 2, 11, and 20 are rejected because the limitation “the generated feedback” has insufficient antecedent basis. Applicants have amended claim 2 to recite “the established communication channel.” Applicants believe the rejections of claims 2, 11, and 20 should be withdrawn in view of the cited amendment.

Claim Rejections - 35 USC § 102

Claims 1-21 are rejected under pre-AIA 35 U.S.C. § 102(3) as allegedly being anticipated by Myaeng at al. (U.S. Patent Application Publication No. 2011/0047161). Applicants respectfully traverse these rejections and reconsideration and withdrawal of these rejections are respectfully requested.

As amended, claim 1 recites:

generating, via a first user, a query based at least in part on a topic of interest;

expanding, via the first user, search terms of the query;

executing, via the first user, the query on a plurality of data sources;

selecting, via the first user, at least one data source from the plurality of data sources, the at least one data source being selected when results of the query are greater than or equal to an accuracy thresholds;

monitoring, via the first user based on a schedule, the at least one data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof; and

establishing, via the first user, a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.

Pages 3-4 of the Office Action states that paragraph 52 and FIGURE 1 of Myaeng disclose monitoring at least one specific data source for matches to a query. Applicants provide the following remarks.

As stated on page 3 of the Office Action, paragraph 52 of Myaeng discloses that the user determines whether a document is relevant to a query. In contrast, claim 1 recites “monitoring, via the first user based on a schedule, the at least one data source to extract data from the at least one data source when at least an update to stored data that matches the query, newly added data that matches the query, or a combination thereof.”

That is, the claimed monitoring is performed based on a schedule, such as real-time, once a day, once an hour, etc... The monitoring determines whether any new data or updated data matches the query. Furthermore, the data is extracted if the new/updated data matches the query.

Accordingly, because Myaeng is only directed to determining if a document is relevant and is silent on monitoring the data source to extract data from the data source when new data or updated data matches the query, applicants submit that Myaeng fails to teach or suggest the cited elements of claim 1.

Furthermore, as amended, claim 1 incorporates elements similar to those recited in original claim 2. Specifically, as amended, claim 1 recites, in part, establishing, via the first user, a communication channel with a second user based at least in part on the data extracted from the at least one monitored data source.

For claim 2, page 4 of the Office Action states that paragraph 58 of Myaeng discloses establishing a communication channel with a user based at least in part on the analyzed data. Applicants provide the following remarks.

The cited portion of Myaeng is directed to generating a query. In contrast, the cited portion of claim 1 is directed to establishing a communication channel between two users. Applicants submit that establishing a communication channel between two users, as recited in claim 1, is patentably distinguishable from classifying a query, as discussed in paragraph 58 of Myaeng. Therefore, because Myaeng is silent on establishing a communication channel between two users based at least in part on the data extracted from the at least one monitored data source, applicants submit that Myaeng fails to teach or suggest the cited elements of claim 1.

Applicants would like to discuss the amendments to the claims and the remarks provided above.

CONCLUSION

The absence of a reply to a specific rejection, issue, or comment does not signify agreement with or concession of that rejection, issue, or comment. In addition, because the arguments above may not be exhaustive, there may be other reasons for patentability of any or all claims that have not been expressed. Finally, nothing in this paper should be construed as an intent to concede any issue with regard to any claim, except as specifically stated in this paper, and the amendment or cancellation of any claim does not necessarily signify concession of unpatentability of the claim prior to its amendment or cancellation.

In light of the amendments and remarks, applicants submit that the claims are in condition for allowance and respectfully request a notice to this effect. Should the Examiner have any questions, please call the undersigned at the phone number listed below.

To the extent necessary, a petition for an extension of time under 37 C.F.R. § 1.136 is submitted. Please charge any shortage in fees due in connection with the filing of this paper, including extension of time fees, to Deposit Account 50-2291 and please credit any excess fees to such deposit account.

Dated: April 8, 2015

Respectfully submitted,

By: _____

Office Action Summary	Application No. 13/928,313	Applicant(s) CHADHA ET AL.	
	Examiner MICHAEL PHAM	Art Unit 2167	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 6/26/2013.
☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on ____; the restriction requirement and election have been incorporated into this action.
- 4) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

- 5) ☒ Claim(s) 1-21 is/are pending in the application.
5a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 6) ☐ Claim(s) ____ is/are allowed.
- 7) ☒ Claim(s) 1-21 is/are rejected.
- 8) ☐ Claim(s) ____ is/are objected to.
- 9) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

- 10) ☐ The specification is objected to by the Examiner.
- 11) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

- a) ☐ All b) ☐ Some** c) ☐ None of the:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☒ Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b)
Paper No(s)/Mail Date 10/21/2013
- 3) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 4) ☐ Other: ____.

The present application is being examined under the pre-AIA first to invent provisions.

DETAILED ACTION

Claim Status

1. Claims 1-21 are pending and have been examined.

Claim Rejections - 35 USC § 112

2. The following is a quotation of 35 U.S.C. 112(b):
(b) CONCLUSION.—The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the inventor or a joint inventor regards as the invention.

The following is a quotation of 35 U.S.C. 112 (pre-AIA), second paragraph:
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2, 11, and 20 are rejected under 35 U.S.C. 112(b) or 35 U.S.C. 112 (pre-AIA), second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which the inventor or a joint inventor, or for pre-AIA the applicant regards as the invention.

Claims 2, 11, and 20 recite the limitation "the generated feedback" in line 6 of claim 2, line 7 of claim 11, and line 6 of claim 20. There is insufficient antecedent basis for this limitation in these claims.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of pre-AIA 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –
(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-21 are rejected under pre-AIA 35 U.S.C. 102(e) as being anticipated by U.S. Patent Application Publication 20110047161 by Myaeng et. al. (hereafter Myaeng).

Claim 1 :

Myaeng discloses

“generating a query based at least in part on a topic of interest;” [generating a query (figure 5 element 51, query is input from user) based at least in part on a topic of interest (figure 5 52, classify query topic category for user query)]

“expanding search terms of the query;”[expanding search terms (figure 5 55, expand initial user query using ranked representative keywords) of the query (figure 5, 55, user query)]

“executing the query on a plurality of data sources; and” [figure 5 element 56, retrieve all of corresponding documents online using expanded query. Accordingly, executing the query (figure 5 element 56, using expanded query) on a plurality of data sources (figure 5, element 56, retrieving all of corresponding documents)]

“monitoring at least one specific data source selected from the plurality of data sources for matches to the query.” [monitoring (0052, determining a document relevant to a user query)at

Art Unit: 2167

least one specific data source (figure 1, elements 12) selected from the plurality of data sources (figure 1 elements 12, 13, 14) for matches to the query (figure 1 element 12; 0052, document collection database 12 stores query/document text information for determining a document relevant to a user query)]

Claim 2 :

Myaeng discloses

“extracting data from the at least one monitored specific data source;”[0050, a service server fro ranking relevant documents as retrieval results which a search engine retrieves in response to a user query and provides a user with ranked documents through an online web browser. 0052, the relevance determined document collection database 12 stores query/document text information for determining a document relevant to a user query. 0059 extracts a corresponding topic category. Accordingly, extracting data (0059, extracts a corresponding topic category) from the at least one monitored specific data source (figure 1 12)]

“analyzing the extracted data;”[0058, extracts a corresponding query topic category and classifies a user query as the extracted query topic category]

“establishing a communication channel with a user based at least in part on the analyzed data; and” [0058, inquires into query/document text information stored in the relevance determined document collection database 12 through a query input from a user, and extracts a corresponding query topic category and classifies a user query as the extracted query topic category. Accordingly, establishing a communication channel (0058, inquires...) with a user (0058, ..through a query input from a user) based at least in part on the analyzed data (0058, classifies a user query as the extracted query topic category)]

“receiving feedback from the user based at least in part on the generated feedback.”

[receiving feedback from the user (0051, classifies a document which a user regards as relevant) based at least in part on the generated feedback (0051, topic category classifier classifies query input from a user)]

Claim 3 :

Myaeng discloses “The method of claim 2, further comprising visualizing at least the extracted data, the analyzed data, or a combination thereof.” [0102, search engine provides a user with retrieved documents as information retrieval results for a user query in the form of a web page including a list which is ordered according to a ranking of the representative keywords through the service server. Accordingly, visualizing (0102, provides a user with retrieved documents as information retrieval results for a user query) at least the extracted data, the analyzed data (0102, a user query), or a combination thereof]

Claim 4 :

Myaeng discloses “The method of claim 1, in which expanding the query comprises expanding the search terms to include at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof.”[Accordingly, in which expanding the query (figure 5 55, expand initial user query using ranked representative keywords) comprises sub-topics (0099, keywords are extracted from documents corresponding to a topic category which is allocated to relevant documents, and are ranked based on DF*ICF weight to thereby configure a representative keyword list)]

Claim 5 :

Myaeng discloses “The method of claim 1, further comprising: refining the search terms based at least in part on the executed query, and in which the monitoring is performed to monitor for matches to a refined query.” [refining the search terms based at least in part on the executed query (figure 5 55, expand initial user query using ranked representative keywords), and in which the monitoring is performed to monitor for matches to a refined query (figure 1 element 12; 0052, document collection database 12 stores query/document text information for determining a document relevant to a user query)]

Claim 6 :

Myaeng discloses “The method of claim 1, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that at not publically accessible.” [the plurality of data sources (figure 1 12, 13, 14) include open-source data sources (figure 1 12) that are publically available (0052, database 12 stores query/document text information for determining a document relevant to a user query) and closed-source data sources (figure 1 13, 14) that at not publically accessible (13 and 14 do not determine the relevant documents. 0052, database 12 stores query/document text information for determining a document relevant to a user query.)]

Claim 7 :

Myaeng discloses “The method of claim 1, in which the query is a natural language query, and further comprising translating the query to a system understood language.” [query is a natural language query (0046, keyword input from a user), and further comprising translating the query to a system understood language (0051, classifies a query input from a user)]

Claim 8 :

Myaeng discloses “The method of claim 1, in which the plurality of data sources are pre-defined.” [0049, an information retrieval system according to an exemplary embodiment of the present invention includes a topic category classifier 11, a relevance determined document collection database 12, a topic category transition map database 13, and a topic category-classified pseudo document set database. Accordingly, the plurality of data sources (figure 1 12, 13, 14) are pre-defined (figure 1; 0049, includes)]

Claim 9 :

Myaeng discloses “The method of claim 1, in which the monitoring comprises deploying extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source.” [the monitoring (0052, determining a document relevant to a user query) comprises deploying extractors to each of specific data source(0058, extracts a corresponding query topic category), a number of extractors being dynamic(0058, extracts a corresponding) based at least in part on a traffic volume (0058, input from a user) of each specific data source (0058, database 12)]

Claim 10 :

Myaeng discloses

“a memory unit; and”[0113, storing medium]

“at least one processor coupled to the memory unit, in which the at least one processor is configured.” [0113, computer]

“to generate a query based at least in part on a topic of interest;” [figure 5 51 and 52. Accordingly, to generate a query (figure 5 element 51, query is input from user) based at least in part on a topic of interest (figure 5 52, classify query topic category for user query)]

“to expand search terms of the query;” [figure 5 55. Accordingly, to expand search terms (figure 5 55, expand initial user query using ranked representative keywords) of the query (figure 5, 55, user query)]

“to execute the query on a plurality of data sources; and” [figure 5 element 56, retrieve all of corresponding documents online using expanded query. Accordingly, to execute the query (figure 5 element 56, using expanded query) on a plurality of data sources (figure 5, element 56, retrieving all of corresponding documents)]

“to monitor at least one specific data source selected from the plurality of data sources for matches to the query.” [figure 1 and 0052. Accordingly, to monitor at least one specific data source (figure 1, elements 12) selected from the plurality of data sources (figure 1 elements 12, 13, 14) for matches to the query (figure 1 element 12; 0052, document collection database 12 stores query/document text information for determining a document relevant to a user query)]

Claim 11 :

Myaeng discloses

“to extract data from the at least one monitored specific data source;”[0050, a service server fro ranking relevant documents as retrieval results which a search engine retrieves in response to a user query and provides a user with ranked documents through an online web browser. 0052, the relevance determined document collection database 12 stores query/document text information for determining a document relevant to a user query. 0059

Art Unit: 2167

extracts a corresponding topic category. Accordingly, extracting data (0059, extracts a corresponding topic category) from the at least one monitored specific data source (figure 1 12)]

“to analyze the extracted data;”[0058, extracts a corresponding query topic category and classifies a user query as the extracted query topic category]

“to establish a communication channel with a user based at least in part on the analyzed data; and” [0058, inquires into query/document text information stored in the relevance determined document collection database 12 through a query input from a user, and extracts a corresponding query topic category and classifies a user query as the extracted query topic category. Accordingly, establishing a communication channel (0058, inquires...) with a user (0058, ..through a query input from a user) based at least in part on the analyzed data (0058, classifies a user query as the extracted query topic category)]

“to receive feedback from the user based at least in part on the generated feedback.”
[receiving feedback from the user (0051, classifies a document which a user regards as relevant) based at least in part on the generated feedback (0051, topic category classifier classifies query input from a user)]

Claim 12 :

Myaeng discloses “The apparatus of claim 11, in which the at least one processor is further configured to visualizing at least the extracted data, the analyzed data, or a combination thereof.”
[0102, search engine provides a user with retrieved documents as information retrieval results for a user query in the form of a web page including a list which is ordered according to a ranking of the representative keywords through the service server. Accordingly, visualizing (0102, provides a user with retrieved documents as information retrieval results for a user query) at least the

extracted data, the analyzed data (0102, a user query), or a combination thereof]

Claim 13 :

Myaeng discloses “The apparatus of claim 11, in which the at least one processor is further configured to expand the search terms to include at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof.”[Accordingly, to expand the query (figure 5 55, expand initial user query using ranked representative keywords) comprises sub-topics (0099, keywords are extracted from documents corresponding to a topic category which is allocated to relevant documents, and are ranked based on DF*ICF weight to thereby configure a representative keyword list)]

Claim 14 :

Myaeng discloses “The apparatus of claim 11, in which the at least one processor is further configured: to refine the search terms based at least in part on the executed query, and to monitor for matches to a refined query.” [refining the search terms based at least in part on the executed query (figure 5 55, expand initial user query using ranked representative keywords), and to monitor for matches to a refined query (figure 1 element 12; 0052, document collection database 12 stores query/document text information for determining a document relevant to a user query)]

Claim 15 :

Myaeng discloses “The apparatus of claim 11, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that are not publically accessible.”[the plurality of data sources (figure 1 12, 13, 14) include open-source data sources (figure 1 12) that are publically available (0052, database 12 stores query/document text information for determining a document relevant to a user query) and closed-source data

Art Unit: 2167

sources (figure 1 13, 14) that are not publically accessible (13 and 14 do not determine the relevant documents. 0052, database 12 stores query/document text information for determining a document relevant to a user query.)]

Claim 16 :

Myaeng discloses “The apparatus of claim 11, in which the query is a natural language query, and in which the at least one processor is further configured to translate the query to a system understood language.” [query is a natural language query (0046, keyword input from a user), and in which the at least one processor is further configured to translate the query to a system understood language (0051, classifies a query input from a user)]

Claim 17 :

Myaeng discloses “The apparatus of claim 11, in which the plurality of data sources are pre-defined.” [0049, an information retrieval system according to an exemplary embodiment of the present invention includes a topic category classifier 11, a relevance determined document collection database 12, a topic category transition map database 13, and a topic category-classified pseudo document set database. Accordingly, the plurality of data sources (figure 1 12, 13, 14) are pre-defined (figure 1; 0049, includes)]

Claim 18 :

Myaeng discloses “The apparatus of claim 11, in which the at least one processor is further configured to deploy extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source. [in which the at least one processor is further configured to deploy extractors to each of specific data source (0058, extracts a corresponding query topic category), a number of extractors being

Art Unit: 2167

dynamic(0058, extracts a corresponding) based at least in part on a traffic volume (0058, input from a user) of each specific data source (0058, database 12)]

Claim 19 :

Myaeng discloses

“a non-transitory computer-readable medium having program code recorded thereon, the program code comprising:” [0113, storing medium]

“program code to generate a query based at least in part on a topic of interest;” [figure 5 51 and 52. Accordingly, program code to generate a query (figure 5 element 51, query is input from user) based at least in part on a topic of interest (figure 5 52, classify query topic category for user query)]

“program code to expand search terms of the query;” [figure 5 55. Accordingly, program code to expand search terms (figure 5 55, expand initial user query using ranked representative keywords) of the query (figure 5, 55, user query)]

“program code to execute the query on a plurality of data sources; and” [figure 5 element 56, retrieve all of corresponding documents online using expanded query. Accordingly, program code to execute the query (figure 5 element 56, using expanded query) on a plurality of data sources (figure 5, element 56, retrieving all of corresponding documents)]

“program code to monitor at least one specific data source selected from the plurality of data sources for matches to the query.” [figure 1 and 0052. Accordingly, program code to monitor at least one specific data source (figure 1, elements 12) selected from the plurality of data sources (figure 1 elements 12, 13, 14) for matches to the query (figure 1 element 12; 0052, document collection database 12 stores query/document text information for determining a

Art Unit: 2167

document relevant to a user query))]

Claim 20 :

Myaeng discloses “program code to extract data from the at least one monitored specific data source;”[0050, a service server fro ranking relevant documents as retrieval results which a search engine retrieves in response to a user query and provides a user with ranked documents through an online web browser. 0052, the relevance determined document collection database 12 stores query/document text information for determining a document relevant to a user query. 0059 extracts a corresponding topic category. Accordingly, extracting data (0059, extracts a corresponding topic category) from the at least one monitored specific data source (figure 1 12)]

“program code to analyze the extracted data;”[0058, extracts a corresponding query topic category and classifies a user query as the extracted query topic category]

“program code to establish a communication channel with a user based at least in part on the analyzed data; and” [0058, inquiries into query/document text information stored in the relevance determined document collection database 12 through a query input from a user, and extracts a corresponding query topic category and classifies a user query as the extracted query topic category. Accordingly, establishing a communication channel (0058, inquires...) with a user (0058, ..through a query input from a user) based at least in part on the analyzed data (0058, classifies a user query as the extracted query topic category)]

“program code to receive feedback from the user based at least in part on the generated feedback.” [receiving feedback from the user (0051, classifies a document which a user regards as relevant) based at least in part on the generated feedback (0051, topic category classifier classifies query input from a user)]

Claim 21 :

Myaeng discloses “The computer program of claim 19, further comprising: program code to refine the search terms based at least in part on the executed query, and program code to monitor for matches to a refined query. [program code to refine the search terms based at least in part on the executed query (figure 5 55, expand initial user query using ranked representative keywords), and program code to monitor for matches to a refined query (figure 1 element 12; 0052, document collection database 12 stores query/document text information for determining a document relevant to a user query)]

Conclusion

6. The prior art made of record listed on pto-892 and not relied, if any, upon is considered pertinent to applicant’s disclosure.

Contact Information

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL PHAM whose telephone number is (571)272-3924. The examiner can normally be reached on 9am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Robert Beausoliel can be reached on 571-272-3645. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2167

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

A copy of this form, together with a statement under 37 CFR 3.73(c) (Form PTO/AIA/96 or equivalent) is required to be filed in each application in which this form is used. The statement under 37 CFR 3.73(c) may be completed by one of The practitioners appointed in this form, and must identify the application in which this Power of Attorney is to be filed.

SIGNATURE of Assignee of Record

The individual whose signature and title is supplied below is authorized to act on behalf of the assignee

Signature		Date	12 Feb 2014
Name	Sharon Chadha	Telephone	369803984
Title	Chairperson		

This collection of information is required by 37 CFR 1.31, 1.32 and 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDER 37 CFR 3.73(c)Applicant/Patent Owner: Rule 14Application No./Patent No.: 13/928,313 Filed/Issue Date: June 26, 2013Titled: REAL-TIME AND ADAPTIVE DATA MININGRule 14, a corporation

(Name of Assignee)

(Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

states that, for the patent application/patent identified above, it is (choose one of options 1, 2, 3 or 4 below):

1. ☒ The assignee of the entire right, title, and interest.
2. ☐ An assignee of less than the entire right, title, and interest (check applicable box):
- ☐ The extent (by percentage) of its ownership interest is _____%. Additional Statement(s) by the owners holding the balance of the interest must be submitted to account for 100% of the ownership interest.
- ☐ There are unspecified percentages of ownership. The other parties, including inventors, who together own the entire right, title and interest are:

Additional Statement(s) by the owner(s) holding the balance of the interest must be submitted to account for the entire right, title, and interest.

3. ☐ The assignee of an undivided interest in the entirety (a complete assignment from one of the joint inventors was made). The other parties, including inventors, who together own the entire right, title, and interest are:

Additional Statement(s) by the owner(s) holding the balance of the interest must be submitted to account for the entire right, title, and interest.

4. ☐ The recipient, via a court proceeding or the like (e.g., bankruptcy, probate), of an undivided interest in the entirety (a complete transfer of ownership interest was made). The certified document(s) showing the transfer is attached.

The interest identified in option 1, 2 or 3 above (not option 4) is evidenced by either (choose one of options A or B below):

- A. ☒ An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel 030694, Frame 0290, or for which a copy thereof is attached.
- B. ☐ A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:
1. From: _____ To: _____
- The document was recorded in the United States Patent and Trademark Office at
- Reel _____, Frame _____, or for which a copy thereof is attached.
2. From: _____ To: _____
- The document was recorded in the United States Patent and Trademark Office at
- Reel _____, Frame _____, or for which a copy thereof is attached.

[Page 1 of 2]

This collection of information is required by 37 CFR 3.73(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDER 37 CFR 3.73(c)

3. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

4. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

5. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

6. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.☐ Additional documents in the chain of title are listed on a supplemental sheet(s).☒ As required by 37 CFR 3.73(c)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

[NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

Title:REAL-TIME AND ADAPTIVE DATA MINING

Publication No.US-2014-0040301-A1

Publication Date:02/06/2014

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently <http://www.uspto.gov/patft/>.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently <http://pair.uspto.gov/>. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

CERTIFICATION STATEMENT

Please see 37 CFR 1.97 and 1.98 to make the appropriate selection(s):

☐ That each item of information contained in the information disclosure statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(1).

OR

☐ That no item of information contained in the information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the person signing the certification after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in 37 CFR 1.56(c) more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(2).

☐ See attached certification statement.

☐ The fee set forth in 37 CFR 1.17 (p) has been submitted herewith.

☒ A certification statement is not submitted herewith.

SIGNATURE

A signature of the applicant or representative is required in accordance with CFR 1.33, 10.18. Please see CFR 1.4(d) for the form of the signature.

Signature	/Puya Partow-Navid/	Date (YYYY-MM-DD)	2013-10-21
Name/Print	Puya Partow-Navid	Registration Number	59657

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Information:					

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Warnings:					
Information:					

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

FILING RECEIPT

OC00000006268852

Date Mailed: 07/25/2013

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. **If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections**

Title

REAL-TIME AND ADAPTIVE DATA MINING

Preliminary Class

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications: No

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. To learn more about why the United States is the best country in the world to develop technology, manufacture products, deliver services, and grow your business, visit <http://www.SelectUSA.gov> or call +1-202-482-6800.

RESPONSE TO REQUEST FOR CORRECTED FILING RECEIPT

Power of Attorney, Claims, Fees, System Limitations, and Miscellaneous

In response to your request for a corrected Filing Receipt, the Office is unable to comply with your request because:

- Any request to correct or update the name of the applicant must include an application data sheet (ADS) in compliance with 37 CFR 1.76 specifying the correct or updated name of the applicant in the applicant information section. Any request to change the applicant after an original applicant has been specified under 37 CFR 1.46(b) must include a new ADS in compliance with 37 CFR 1.76 specifying the applicant in the applicant information section and comply with 37 CFR 3.71 and 3.73. See 37 CFR 1.46(c).

NOTICE REGARDING POWER OF ATTORNEY

This is in response to the power of attorney filed 06/26/2013. The power of attorney in this application is not accepted for the reason(s) listed below:

- The power of attorney has not been accepted because the party who is giving power of attorney has not been identified. Power of attorney may only be signed by the applicant for patent (37 CFR 1.42) or the patent owner. A patent owner who was not the applicant must appoint any power of attorney in compliance with 37 CFR 3.71 and 3.73. See 37 CFR 1.32(b)(4).

Foreign Priority Information:

This section allows for the applicant to claim priority to a foreign application. Providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and 37 CFR 1.55(d). When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX) the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(h)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013.

Authorization to Permit Access:

		Application Number	
Title of Invention	REAL-TIME AND ADAPTIVE DATA MINING		

☒ Authorization to Permit Access to the Instant Application by the Participating Offices

If checked, the undersigned hereby grants the USPTO authority to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the World Intellectual Property Office (WIPO), and any other intellectual property offices in which a foreign application claiming priority to the instant patent application is filed access to the instant patent application. See 37 CFR 1.14(c) and (h). This box should not be checked if the applicant does not wish the EPO, JPO, KIPO, WIPO, or other intellectual property office in which a foreign application claiming priority to the instant patent application is filed to have access to the instant patent application.

In accordance with 37 CFR 1.14(h)(3), access will be provided to a copy of the instant patent application with respect to: 1) the instant patent application-as-filed; 2) any foreign application to which the instant patent application claims priority under 35 U.S.C. 119(a)-(d) if a copy of the foreign application that satisfies the certified copy requirement of 37 CFR 1.55 has been filed in the instant patent application; and 3) any U.S. application-as-filed from which benefit is sought in the instant patent application.

In accordance with 37 CFR 1.14(c), access may be provided to information concerning the date of filing this Authorization.

Applicant Information:

Providing assignment information in this section does not substitute for compliance with any requirement of part 3 of Title 37 of CFR to have an assignment recorded by the Office.

Applicant 1[Remove](#)

If the applicant is the inventor (or the remaining joint inventor or inventors under 37 CFR 1.45), this section should not be completed. The information to be provided in this section is the name and address of the legal representative who is the applicant under 37 CFR 1.43; or the name and address of the assignee, person to whom the inventor is under an obligation to assign the invention, or person who otherwise shows sufficient proprietary interest in the matter who is the applicant under 37 CFR 1.46. If the applicant is an applicant under 37 CFR 1.46 (assignee, person to whom the inventor is obligated to assign, or person who otherwise shows sufficient proprietary interest) together with one or more joint inventors, then the joint inventor or inventors who are also the applicant should be identified in this section.

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

REAL-TIME AND ADAPTIVE DATA MINING

CROSS-REFERENCE TO RELATED APPLICATION

[0001] This application claims the benefit under 35 U.S.C. § 119(e) to United States Provisional Patent Application No. 61/679,024 entitled “LOSS PREVENTION SERVICES PLATFORM BASED ON MACHINE LEARNING,” filed on August 2, 2012, the disclosure of which is expressly incorporated by reference herein in its entirety.

BACKGROUND

Field

[0002] Aspects of the present disclosure relate generally to data mining, and more particularly to providing a real-time data mining platform and interactive feedback platform.

Background

[0003] The Internet provides and generates large amounts of data on a daily basis. The data may be monitored from data sources, such as, but not limited to, social media, web feeds, customer feedback, internal company databases, and proprietary data silos. With the proper tools, the data extracted from the data sources may be used to provide analysis for various topics. For example, the extracted data may indicate patterns for domestic unrest or a customer’s habits/patterns. More specifically, as an example, the extracted data may yield a consumers financial profile, retail history, social influences, and expressed interests.

[0004] Typical search engines are not designed for analyzing multiple data points in real time. Furthermore, the query of a search engine is limited to the exact search term. Moreover, a typical search engine is limited to querying indexed web sites. That is, search engines are typically limited to searching structured data sources. By some accounts, nearly seventy percent of web pages are not indexed by search engines. The non-indexed web pages may be, for example, proprietary data silos, web sites behind firewalls, and/or comment sections on a web page. Accordingly, the information obtained via search engines is limited and is not desirable for real-time data analysis that is specified for automated data extraction.

[0005] Thus, as the demand for real-time information continues to increase, there exists a need for further improvements in data mining and web searching technologies. Preferably, these improvements should be applicable to all real-time data extraction technologies and the digital systems that employ these technologies.

[0006] This has outlined, rather broadly, the features and technical advantages of the present disclosure in order that the detailed description that follows may be better understood. Additional features and advantages of the disclosure will be described below. It should be appreciated by those skilled in the art that this disclosure may be readily utilized as a basis for modifying or designing other structures for carrying out the same purposes of the present disclosure. It should also be realized by those skilled in the art that such equivalent constructions do not depart from the teachings of the disclosure as set forth in the appended claims. The novel features, which are believed to be characteristic of the disclosure, both as to its organization and method of operation, together with further objects and advantages, will be better understood from the following description when considered in connection with the accompanying figures. It is to be expressly understood, however, that each of the figures is provided for the purpose of illustration and description only and is not intended as a definition of the limits of the present disclosure.

SUMMARY

[0007] According to an aspect of the present disclosure, a method of analyzing data is presented. The method includes generating a query based on a topic of interest. The method also includes expanding search terms of the query. The method further includes executing the query on one or more data sources. The method still further includes monitoring a specific data source selected from the one or more data sources. The monitoring is performed to monitor for matches to the query.

[0008] According to another aspect of the present disclosure, an apparatus for analyzing data is presented. The apparatus includes a memory unit and a processor(s) coupled to the memory unit. The processor(s) is configured to generate a query based on a topic of interest. The processor(s) is also configured to expand search terms of the query. The processor(s) is further configured to execute the query on one or more data sources. The processor(s) is still

further configured to monitor a specific data source selected from the one or more data sources. The monitoring is performed to monitor for matches to the query.

[0009] In yet another aspect of the present disclosure, a computer program product for data analysis having a non-transitory computer-readable medium is disclosed. The computer readable medium has non-transitory program code recorded thereon which, when executed by the processor(s), causes the processor(s) to perform operations of generating a query based on a topic of interest. The program code also causes the processor(s) to expand search terms of the query. The program code further causes the processor(s) to execute the query on one or more data sources. The program code still further causes the processor(s) to monitor a specific data source selected from the one or more data sources. The monitoring is performed to monitor for matches to the query.

[0010] Additional features and advantages of the disclosure will be described below. It should be appreciated by those skilled in the art that this disclosure may be readily utilized as a basis for modifying or designing other structures for carrying out the same purposes of the present disclosure. It should also be realized by those skilled in the art that such equivalent constructions do not depart from the teachings of the disclosure as set forth in the appended claims. The novel features, which are believed to be characteristic of the disclosure, both as to its organization and method of operation, together with further objects and advantages, will be better understood from the following description when considered in connection with the accompanying figures. It is to be expressly understood, however, that each of the figures is provided for the purpose of illustration and description only and is not intended as a definition of the limits of the present disclosure.

BRIEF DESCRIPTION OF THE DRAWINGS

[0011] The features, nature, and advantages of the present disclosure will become more apparent from the detailed description set forth below when taken in conjunction with the drawings in which like reference characters identify correspondingly throughout.

[0012] FIGURE 1 is a diagram illustrating a call flow for a data mining system according to an aspect of the present disclosure.

[0013] FIGURE 2 is a block diagram for a data mining system according to an aspect of the present disclosure.

[0014] FIGURE 3 illustrates various data visualization schemes according to aspects of the present disclosure.

[0015] FIGURES 4-8 are block diagrams for a data mining system according to aspects of the present disclosure.

[0016] FIGURE 9 illustrates a hierarchy of security rights according to an aspect of the present disclosure.

[0017] FIGURES 10A and 10B illustrate typical sequential data extraction schemes.

[0018] FIGURE 10C illustrates a parallel data extraction scheme according to an aspect of the present disclosure.

[0019] FIGURES 11 and 12 illustrate examples of data extraction and analysis according to an aspect of the present disclosure.

DETAILED DESCRIPTION

[0020] The detailed description set forth below, in connection with the appended drawings, is intended as a description of various configurations and is not intended to represent the only configurations in which the concepts described herein may be practiced. The detailed description includes specific details for the purpose of providing a thorough understanding of the various concepts. However, it will be apparent to those skilled in the art that these concepts may be practiced without these specific details. In some instances, well-known structures and components are shown in block diagram form in order to avoid obscuring such concepts.

[0021] Aspects of the data mining systems are presented with reference to various apparatus and methods. These apparatus and methods are described in the following detailed description and illustrated in the accompanying drawings by various blocks, modules, components, circuits, steps, processes, algorithms, etc. (collectively referred to as “elements”). These elements may be implemented using electronic hardware, computer software, or any combination thereof. Whether such elements are implemented as hardware or software depends upon the particular application and design constraints imposed on the overall system.

[0022] By way of example, an element, or any portion of an element, or any combination of elements may be implemented with a “processing system” that includes one or more processors. Examples of processors include microprocessors, microcontrollers, digital signal processors (DSPs), field programmable gate arrays (FPGAs), programmable logic devices (PLDs), state machines, gated logic, discrete hardware circuits, and other suitable hardware configured to perform the various functionality described throughout this disclosure. One or more processors in the processing system may execute software. Software shall be construed broadly to mean instructions, instruction sets, code, code segments, program code, programs, subprograms, software modules, applications, software applications, software packages, routines, subroutines, objects, executables, threads of execution, procedures, functions, etc., whether referred to as software, firmware, middleware, microcode, hardware description language, or otherwise.

[0023] Accordingly, in one or more exemplary embodiments, the functions described may be implemented in hardware, software, firmware, or any combination thereof. If implemented in software, the functions may be stored on or encoded as one or more instructions or code on a non-transitory computer-readable medium. Computer-readable media includes computer storage media. Storage media may be any available media that can be accessed by a computer. By way of example, and not limitation, such computer-readable media can comprise RAM, ROM, EEPROM, CD-ROM or other optical disk storage, magnetic disk storage or other magnetic storage devices, or any other medium that can be used to carry or store desired program code in the form of instructions or data structures and that can be accessed by a computer. Disk and disc, as used herein, includes compact disc (CD), laser disc, optical disc, digital versatile disc (DVD), floppy disk and Blu-ray disc where disks usually reproduce data magnetically, while discs reproduce data optically with lasers. Combinations of the above should also be included within the scope of computer-readable media.

[0024] FIGURE 1 is a diagram illustrating a call flow for a data mining system 100 according to an aspect of the present disclosure. At block 102 a query is generated. The query may be a natural language query generated by a user. Alternatively, the query generation may be automated from a query generator. The query generator may be based on artificial intelligence or a similar system.

[0025] At block 104 the query is expanded. In one configuration, the search terms of the query are expanded based on search lexicons. For example, the lexicons may be applied to expand the search using misspellings and derivations of the topic of interest/sub-topics. The lexicon may be generated based on user input and/or may be generated based on automatic word association, such as synonym/antonym trees and lexicons of positive and/or negative modifiers. The expansion of the query at block 104 may be performed by a user and/or may be automated.

[0026] At block 106, the query is executed. The query may be executed on open-source data and proprietary data. Specifically, in one configuration, the query may be limited to specific data sources (e.g., proprietary data sources and open-source data sources). In another configuration, the query searches all available data sources. In yet another configuration, the initial pass of the query is limited to open-source data sources.

[0027] Open-source data refers to publicly available data, such as data available via Wikipedia or the CIA fact book, for example. Sources that are indexed by search engines are also considered open-source data. Open-source data may also refer to data that is not proprietary but still not indexed by a search engine. For example, some sources, such as a blog, may include a comments section. The comments may be updated in real time and are typically not indexed by a search engine. Thus, because the comments are not indexed by a search engine, the contents of the comments are not available when conducting a search. Still, the information in the comments is publically available to anyone that visits a particular source. Therefore, the comments section, or any other non-indexed source may be considered open-source data.

[0028] Proprietary data is data that may not be searchable via a search engine because the proprietary data is not publically available. This may include classified databases, data behind a firewall, or data that is available via a paid subscription, such as Lexis.

[0029] At block 108 the results of the query are reviewed. If the results are satisfactory, specific data sources may be selected to be monitored. If the results are not satisfactory, the query may be expanded and/or refined at block 104. The refinement of the query may be refined based on data sources selected at block 108. At block 110 the selected data sources are monitored. The monitoring may be performed by data extractors that monitor changes to a data source in real-time. When information at the data sources is updated or located to match the query terms, a data extractor extracts the data to be analyzed at block 112. In one configuration,

a quality control analysis may also be performed on the extracted data (not shown). After analyzing the data, the extracted data may be visualized at block 114.

[0030] Additionally, after the data has been analyzed, at block 116, a communication channel may be established with specific individuals and/or other users based on the analyzed data. For example, if the data analysis reveals that a customer may be planning a trip to another country, the data mining system 100 may engage the customer to discuss cell phone data roaming plans and/or other services that may be desired by a customer that is traveling to another country. Furthermore, at block 118, customers and/or users may provide feedback. That is, the customers may provide feedback to the system via a pre-defined communication channel, such as a message board, phone, SMS, or email. The feedback is analyzed at block 112 to determine customer sentiment. Furthermore, in addition to or separate from the open forum, the feedback may also be generated based on the communication channel established at block 116.

[0031] In another configuration, the communication channel of block 116 may be established after the extracted data has been visualized at block 114. It should be noted, the communication channel of block 116 and the visualization of block 114 may be established in parallel or independently. Furthermore, in one configuration, the feedback received at block 118 may be visualized in block 114.

[0032] FIGURE 2 illustrates a data mining system 200 according to an aspect of the present disclosure. Those of skill would further appreciate that the various illustrative modules of FIGURE 2 may be implemented as electronic hardware, computer software, or combinations of both. To clearly illustrate this interchangeability of hardware and software, various illustrative components, blocks, modules, circuits, and steps have been described above generally in terms of their functionality. Whether such functionality is implemented as hardware or software depends upon the particular application and design constraints imposed on the overall system. Skilled artisans may implement the described functionality in varying ways for each particular application, but such implementation decisions should not be interpreted as causing a departure from the scope of the present disclosure.

[0033] The data mining system 200 may include a query module 202 for generating a query. As discussed above, in one configuration, a query is generated for searching specific data sources. In one configuration, the query is a natural language query. For example, the natural

language query may be "I want to know the sentiment of wireless phone customers." The query represents a topic of interest (TOI), for example, the topic of interest may be a person, such as Michael Jackson, an event, such as the Arab Spring, a service, such as wireless phone, and/or any other informational element that may be queried.

[0034] Additionally, the data sources may include websites, private databases, public databases, and/or any data source that may be electronically accessed. Furthermore, the query may further specify the parties that hold the opinion, such as the author of the content. Thus, in one configuration, the query may specify the sources of the data, such as URLs, websites of specific countries, and/or internal/external data silos. Furthermore, the query may further specify the author of the specified data sources, such as, main stream media, bloggers, user comments, and/or social media.

[0035] Furthermore, in one configuration, the query may be specified for a specific time frame. The time frame may be a specific time frame of the past, a time frame of the future, or a specific interval. For example, the query may only apply to events that occurred in the summer of 2012. As another example, the query may be generated to run in three months from the date of origin for the query.

[0036] In one configuration, after generating the query, open-source data is mined using the topic of interest and sub-topics. Sub-topics refer to topics related to the topic of interest. For example, for the query "I want to know the sentiment of wireless phone customers," the topic of interest may be a specific wireless provider and/or "wireless phone customers." Furthermore, in the present example, the sub-topics may be "iPhone customers" and "wireless customers." The open-source data refers to data that is generally available to the public. For example, data that is not deemed classified by a sovereign entity may be one source of open-source data. Open-source data may also include, but is not limited to, data available via a website, a data base, and/or a really simple syndication (RSS) feed.

[0037] After mining the open-source data using the topic of interest and sub-topics, the query parameters (e.g., search parameters) may be expanded and/or further processed. That is, during the initial query generation, the user defines the scope of the query. Specifically, the user determines, to the best of their ability, the topics of interest and their sub-topics. After the query is executed, the user may find unintended search results. Some of the unintended search results

may be false positives, while others may be relevant to the context of the query. Consequently, the user may add additional items to the topics of interest and/or sub-topics based on the unintended search results.

[0038] According to one aspect of the present disclosure, the query expansion and/or further processing may be performed in the query module 202. Alternatively, the query expansion and/or further processing may be performed in a module that is separate from the query module 202 (not shown).

[0039] In one configuration, a lexicon is applied to expand on the search parameters. The lexicon may be applied prior to the initial search and/or during the query expansion phase. The lexicon may also include misspellings and derivations of the topic of interest/sub-topics. The lexicon may be generated based on user input and/or may be generated based on automatic word association, such as synonym/antonym trees and lexicons of positive and/or negative modifiers.

[0040] As an example, for the query “Arab spring,” the lexicon may be applied to expand the search to include relevant search terms such as, for example, “revolution,” and/or “unrest.” In this example, the lexicon may also apply misspellings, such as “spirng,” to the search terms.

[0041] The expanded query is run on the data sources and the results are analyzed via a results module 204. The expanded query may be performed across meta-data for the web. Furthermore, in addition to, or separate from the meta-data search, in one configuration, the query is also performed on the selected data sources. If the results of the query are deemed satisfactory, data extractors are generated to monitor one or more of the specified data sources. That is, the results of the query are reviewed by a user, after reviewing the results, one or more of the data sources are selected based on the accuracy of the search results. The user may also select or exclude data sources that are false positives. False positives refer to data sources that are not relevant to the topic of interest but are still returned because the data source matches the query.

[0042] For example, the topic of interest for a query may be “Arab spring” and the results may include topics that are not related to the topic of interest (e.g., false positives). In this example, a search for a search of “Arab spring” may have generated false positive search results such as “Arab spring water” or sources related to the spring season in the Middle East.

Accordingly, sources related to these false positives may be excluded from further iterations of the search. Moreover, sources specifically related to the Arab spring uprisings may be selected by the user based on their accuracy.

[0043] Once the specific data sources have been selected, data extractors are deployed to monitor the specific data sources. In one configuration, when the results of the query do not yield results that are satisfactory to the user, the query is further refined until the desired results are obtained.

[0044] The data mining system 200 may include a data extractor module 206 for deploying data extractors. The data extractors may be referred to as extractors. Extractors refer to applications that monitor and extract data from user-specified locations or sources of interest (e.g., data source). That is, upon deployment, the extractors extract the data from a given source for analysis. Moreover, until terminated, the extractors are maintained at the data source to monitor for any changes to the data. The data changes are analyzed for a match to the key words of the query and the data is transmitted to a data analysis module when there is a match.

[0045] In some cases, the extractors may be bots or crawlers. The number of extractors deployed for a data source may be dynamic. In one configuration, the number of data extractors deployed for a data source increases when activity on the data source increases. For example, if extractors are deployed on a social media source to follow a current event, such as the elections, the number of extractors may increase during times when traffic for the election increases. In this example, the social media traffic may increase during flash points of a campaign, such as primaries, debates, and/or election night.

[0046] In one configuration, after a data source has been identified, the content of the data source is extracted based on a schedule. For example, a user may identify a blog as a data source. Moreover, the identified blog may have multiple authors, still, the user may specify to only extract posts by a first author, rather than all of the authors. The user may also set a schedule for the extractor to determine if there is new content from the first author. The schedule may be once a week, hour, month, minute, or other time. The extractor may extract the content to determine if there is new content. After determining that there is new content, the content will be transmitted to the data mining system. In this configuration, prior to deploying the extractor, the first author is identified as a topic of interest for the query. The extractor determines the

identified topics of interest in external data sources such as social media, websites, proprietary data silos, and transmits the data to the data mining system for analysis.

[0047] Data is extracted when the extractor detects a relevant post. A relevant post refers to data on the data source that match the query and/or key words of the query. The extracted data may be catalogued and stored on a database in a data analysis module 208. The data may also be connected to terrestrial feature markers. The data that is stored in the database may be transmitted to a data analytics module for sentiment analysis, indexing, and/or pattern detection. Archived data is kept for each data source that is monitored.

[0048] In one configuration, sentiment analysis is performed on the extracted data. The sentiment analysis may be language agnostic so that analytics may be performed in any native language, such as, for example, Arabic, Chinese, or Persian. The data analysis may also perform pattern detection, document classification, and sentiment analysis on both structured and unstructured datasets. Additionally, an analysis lexicon may be applied to the sentiment analysis.

[0049] Specifically, the data analysis module 208 may further analyze the data via linguistic patterns to determine the sentiment. That is, via the analysis lexicon, the data is processed using both a clausal and individual word level in English and/or the native language of the data. In one configuration, the data may be processed via successive passes. Numerical values may be assigned to denote sentiment. The sentiment may refer to whether the data is for or against a specific topic.

[0050] In one configuration the numerical values for the sentiment provide a specific range of numerical value to denote the strength of the sentiment. Positive sentiment may be given a value from 1 to X, 1 being the lowest value for a positive sentiment while X denoting the highest sentiment value. Additionally, negative sentiment may be given a value from -1 to -Y, -1 being the lowest value for a negative sentiment while -Y denoting the highest sentiment value.

[0051] The data mining system 200 may include a data visualization module 210 for visualizing data. The visualized data may be based on the data that is analyzed in the data analysis module 208. That is, in one configuration, the data is visualized to display sentiment patterns across datasets. The visualization may be temporal and/or spatial. Furthermore, the visualized data may be exported so that a user may directly manipulate the results.

[0052] Additionally, data mining system 200 may include a customer communication module 212 for establishing a communication channel with customers and/or other users based on the analyzed data. As discussed above, in one example, if the data analysis reveals that a customer may be planning a trip to another country, the data mining system 200 may engage the customer to discuss cell phone data roaming plans and/or other services that may be desired by a customer that is traveling to another country.

[0053] Furthermore, the data mining system 200 may include a customer feedback module 214 for customers and/or users to provide feedback. In one configuration, the feedback is based on an open forum, such as a message board, for the customers to provide feedback to the system. The feedback is analyzed at the data analysis module 208 to determine customer sentiment. Furthermore, in addition to or separate from the open forum, the feedback may also be generated based on the communication channel established via the customer communication module 212.

[0054] In another configuration, the communication channel of the customer communication module 212 may be established after the extracted data has been visualized via the data visualization module 210. Furthermore, in one configuration, the feedback received via the customer feedback module 214 may be visualized at the data visualization module 210.

[0055] FIGURE 3 illustrates examples of data visualization according to aspects of the present disclosure. In one configuration, the data visualization is a sentiment heat map 308. That is, as shown in the sentiment heat map 308, the data may be visualized to show flash points for the extracted data. For example, if the topic of interest is “earthquakes,” the heat map may show the areas in the world that have the most activity on the topic of interest. The heat map is not limited to a world map and may be visualized for any region.

[0056] In another configuration, the data visualization is a bar graph 302 for the sentiment over time. As previously discussed, the analyzed sentiment may be assigned a numerical value. Accordingly, the numerical value for the sentiment may be plotted over time and visualized as shown in the bar graph 302. For example, the topic of interest may be “alternative energy,” and the visualization of the bar graph 302 may show a specific group’s sentiment towards alternative forms of energy over time. In another configuration, the data visualization is pie chart 304 and/or a plot graph 306.

[0057] The data visualization is not limited to the schemes shown in FIGURE 3, the data may be visualized via any desired scheme, such as, but not limited to Calendars, Box Plots, Bubble Charts and variations thereof, Bullet Charts, Chord Diagrams, Cartograms, Dendograms, Network Diagrams, Streamgraphs, Bar Graphs and variations thereof, Tree diagrams, maps, and variations thereof, Line graphs, Maps, Hierarchical Edge Bundling, Scatterplots and Scatterplot Matrices, Sankey diagram, Cluster maps and diagrams, Co-occurrence Matrices, Sunburst charts, Beziers, Word clouds, Heat maps, Timelines, Donuts and Pie charts, and/or Area charts. Moreover, the aforementioned visualizations may be based on dynamic factors, such as, but not limited to force directed movements, time elapse, pattern acceleration, and/or volume. More specifically, the data visualization may be specified to show relationships, variations, anomalies, trends, patterns, pinpoints, ranges, and/or actuals in the target data. It should be noted that the visualization options are configurable by the user and may vary based on the deployment domain and goal of the data mining system.

[0058] FIGURE 4 is a conceptual data flow diagram illustrating the data flow between different modules/means/components in an exemplary query module 400 according to an aspect of the present disclosure. In one configuration, the data flow between different modules/means/components of the query module 202 are similar to the data flow between different modules/means/components of the query module 400.

[0059] As shown in FIGURE 4, query module 400 includes a query setup module 402 for creating a query. The query setup module 402 may receive query elements via an input 406. The query elements may specify the topic of interest and subtopics of interest. In one configuration, the query elements are input by a user and/or automatically generated via a query module (not shown). As discussed above, the query elements may be a natural language query.

[0060] The query module 400 also includes a lexicon module 404 for applying lexicon elements to the query elements received at the query setup module 402. In one configuration, the lexicon elements are applied to the query elements at the query setup module 402. Alternatively, the query setup module 402 may transmit the query elements to the lexicon module 404 so that the lexicon elements may be applied to the query elements.

[0061] As discussed above, the lexicon elements may expand the query elements. In one configuration, for a query, the lexicon is applied to expand the search to include relevant search

terms. The lexicon may also apply misspellings and derivations of the topic of interest/sub-topics. The lexicon may be generated based on user input and/or may be generated based on automatic word association, such as synonym/antonym trees and lexicons of positive and/or negative modifiers.

[0062] The query module 400 also includes a language translator 408 for translating the query elements received at the query setup module 402. The language translator 408 may translate the query elements and/or the results from English to another language, and vice versa. After applying the lexicon via the lexicon module 404 and translating the query elements (if necessary), the query setup module 402 transmits the query to the natural language processor 410. In one configuration, the natural language processor 410 converts the query elements to system-understood operations, such as Boolean operations.

[0063] The query module 400 also includes a search module 412 that distributes the query elements to search data sources. In one configuration, the data sources are defined by a user and are received at the search module 412 via a signal 416. Alternatively, the data sources may also be specified in the query elements received at the search module 412. Results of the search are transmitted to the results module 414. The results module 414 may sort the results and display the results to the user. In one configuration, the user may select the desired results to be stored in memory. The user may select the desired results based on the accuracy of the results and/or the information provided in the results. In one configuration, the results module 414 may be separate from the query module 400. According to an aspect of the present disclosure, the selected results are transmitted to a refinement module 418.

[0064] FIGURE 5 is a conceptual data flow diagram illustrating the data flow between different modules/means/components in an exemplary refinement module 500 according to an aspect of the present disclosure. In one configuration, the refinement module 500 may be included in the query module 400. Still, in the present configuration, the refinement module 500 is distinct from the query module 400. Nonetheless, in the present configuration, the refinement module 500 uses some of the elements of the query module 400.

[0065] As shown in FIGURE 5, the selected results from the results module 502 may be transmitted to the lexicon updating module 504. As previously discussed, at the results module 502, the user selects relevant results for processing (e.g., calibration). That is, the user may

judge the results for accuracy based on the intent of the query. Based on the results selected from the query, the data mining system may refine the lexicons and the query elements.

[0066] More specifically, a search for a topic of interest may yield a plethora of results. Some results may be relevant to the search while others may be false positives. Accordingly, by understanding the data sources that are relevant to the user, the system may further refine to search terms so that a more focused search may be performed in future iterations.

[0067] Thus, the lexicon updating module 504 adjusts the lexicons based on the results selected by the user. The lexicon updating module 504 may transmit the results to the search module 506 to perform another search with the updated lexicons. Additionally, the lexicon module 508 may also be updated with the updated lexicons of the lexicon updating module 504. The lexicon module 508 may receive the updated lexicons from the search module 506 and/or the lexicon updating module 504. The refinement module 500 may run in a loop until the search results reach a desired results threshold. In one configuration, once the desired results have been received via the search module 506, the results module 502 transmits the results to a data analysis module 510.

[0068] FIGURE 6 is a conceptual data flow diagram illustrating the data flow between different modules/means/components in an exemplary data analysis module 600 according to an aspect of the present disclosure.

[0069] In one configuration, the data analysis module 600 includes a pre-processing module 602 that pre-processes the received data. The data may include results found by the extractors. That is, the data from the extractors may include data generated during a first pass of a search in addition to data from subsequent passes. More specifically, the data from subsequent searches may be refined and/or expanded based on the modification of the query. Moreover, the results obtained from the extractors may be time stamped, or given a unique identifier, so that the data of each pass is distinguishable from data of other passes.

[0070] In some cases, the data may be in various formats. For example, data extracted from a website may be different from data extracted from a database. Therefore, the preprocessing 602 may normalize the data to a desired format. After normalizing the data, the pre-processing module transmits the processed data to the data analysis module 604.

[0071] The data analysis module 604 may use various algorithms to analyze the normalized data. In one configuration, the data analysis module 604 includes a user generated algorithm module 606, a machine learning algorithm module 608, a lexicon based matching module 610, and a predictive module 612. In one configuration, the user generated algorithm module 606 executes an algorithm specified by the user. The machine learning algorithm module 608 may detect patterns in the data and the patterns may be applied to future data. The lexicon based matching module 610 finds key words and/or indexes in the body of the data. The predictive module 612 determines patterns in previous data and applies a probability for an occurrence of an event based on the present data. In one configuration, the data analysis module 604 includes all of the aforementioned modules or any combination thereof. Additionally, in another configuration, the user may configure the algorithm modules 606-612 that are used by the data analysis module 604.

[0072] After the data is analyzed, the data is transmitted to a pattern detecting module 614 to detect patterns in the data. In one configuration, the pattern detecting module 614 detects a spike in specific words or phrases. For example, the pattern detecting module 614 may detect a spike in the phrase “I love my iPhone 5.”

[0073] The pattern detecting module 614 may also determine any causality for the spike. That is, the pattern detecting module 614 may determine what caused the spike to occur. For example, the pattern detecting module 614 may determine that the spike for the phrase “I love my iPhone 5” is based on a recent software update to the iPhone. The pattern detecting module 614 transmits the analyzed data and/or the detected patterns to the post-processing module 616. The post-processing module 616 may process the data to a format that is desired for an external system.

[0074] The data and/or detected patterns may be transmitted to a quality control module 618. In one configuration, the data may be transmitted directly from the data analysis module 604 to the quality control module 618. Likewise, the analyzed data from the data analysis module 604 may bypass either the pattern detecting module 614 or the post-processing module 616. The quality control module 618 may include a scoring module 620 for assessing the accuracy of the results over time and as compared to a human analyst. Additionally, the quality control module 618 may include a logging module 622 for logging changes to the analysis of the

data over time and/or per iteration. The logging may be similar to a software version control function. Furthermore, the quality control module 618 may include a labeling module 624 for labeling the data and the datasets for later reference. The labeling may include time stamping, pattern stamping, topic labeling, or any other desired type of label (e.g., identification).

[0075] The results from the quality control are transmitted to the user profile and used for future analysis by the data analysis module 604. The results of the quality control and/or the analyzed data may be stored in a storage module 626. The storage module may also store the patterns detected via the pattern detecting module 614. The results of the quality control and/or the analyzed data may also be displayed via a display module 628. The display module 628 may also display the patterns detected via the pattern detecting module 614. Furthermore, the display module may display a notification when the quality is below a quality threshold and/or when specific analyzed data is detected. Additionally, the analyzed data from the data analysis module 604 may be used to generate notifications and/or open communication channels with users based on various criteria.

[0076] FIGURE 7 is a conceptual data flow diagram illustrating the data flow between different modules/means/components in an exemplary customer communication module 700. The customer communication module may include modules to both communicate with a customer and receive feedback from a customer. In one configuration, the communication module may be a separate from the feedback module.

[0077] As shown in FIGURE 7, the customer communication module 700 may include a communication generation module 702. The communication generation module 702 may receive data from the analyzed results. Furthermore, the communication generation module 702 may receive information regarding a specific user from a user profile module 704. The user information may include information such as, the user's name, address, occupation, spoken languages, physical attributes, preferred communication method, and/or any other desired details. Additionally, the communication generation module 702 may be coupled to a translating module 706 to translate the received data based on the user profile. Furthermore, the communication generation module 702 may be coupled to a natural language processor 714 to process any natural language data. That is, the natural language processor 714 may analyze the received natural language and determine semantic information from the received natural language.

[0078] Based on the data from the analyzed results, the user profile information, and the processing by the translator 706 and/or the natural language processor 714, the communication generation module 702 determines a strategy for communicating with a user. In one configuration, the strategy may be based on historical data. Historical data may include, but is not limited to, company records, sales records, and/or logged customer feedback. Once the strategy has been developed, the communication generation module 702 transmits the strategy to a communication execution module 708 for communicating with the user via one or more determined communication channels. The communication channels may include email, short message service (SMS), click-to-voice, interactive voice response (IVR), or any other desired form of communication. In one configuration, the user specifies their desired form of communication.

[0079] The customer communication module 700 may include a feedback module 710 for receiving a communication from a customer. The communication may be in response to the communication initiated via the communication execution module 708. Alternatively, the communication may be received via a portal, such as a webpage, twitter, message board, or any other communication channel. After receiving the communication from the user, the feedback module 710 transmits the data of the communication to the data analysis module 712 to analyze the data. The data is analyzed similar to the results of a query (e.g., data analysis module 510). That is, the data analysis module 712 may be the same module as the data analysis module 510 of FIGURE 5. In another configuration, the data analysis module 712 may be a different module as the data analysis module 510 of FIGURE 5; still, both modules would have similar functionality.

[0080] In one configuration, the data analysis module 712 may analyze the data for pattern detection and/or natural language processing. The results of the analyzed data may be reported to the user of the data mining system. Furthermore, the results may be transmitted to the communication generation module 702 for further refinement of the communication generation.

[0081] FIGURE 8 is a conceptual data flow diagram illustrating the data flow between different modules/means/components in an exemplary customer communication module 800. The customer communication module 800 may include the feedback module 710 of FIGURE 7.

In one configuration, the customer communication module 800 of FIGURE 8 is integrated with the customer communication module 700 of FIGURE 7.

[0082] As shown in FIGURE 8, the customer communication module 800 may include a feedback module 802 for receiving an input from a user via a communication channel. The communication channel may include, but is not limited to, SMS, email, web based communication, or a user-defined method. The feedback module 802 receives the communication, which may be received as a string of characters and processes the input to a desired format. The input is then transmitted to a parsing module 804 to be parsed based on lexicon sets and relationship maps, such as ontology sets, to classify the topic of the input.

[0083] After the string is parsed to determine the topic of the input, the parsed string is transmitted to a routing module 806 to be routed based on the identified topic. That is, the routing module 806 may look up the topic in a topic index so that the proper response is determined. After determining the proper index, the routing module 806 may transmit the topic index to the response module 808. The response module 808 determines the response from responses stored in a database 810. For example, if the string includes the words “appointment” and “schedule,” the routing module 806 may determine that an index is “scheduling an appointment” and transmits the index to the response module 808. In this example, the response module 808 may then communicate with the user to schedule an appointment.

[0084] The responses in the database 810 may be updated in real time based on a machine learning module 812. For example, an index of “scheduling an appointment” may be determined based on a string including the words “appointment” and “schedule.” Over time, the system may determine that communicating a response to schedule an appointment is not the appropriate response. That is, based on customer feedback, or other types of feedback, the system may determine that the proper response is to provide the user with the schedule of their appointments, or another type of response.

[0085] After determining the proper response, the response module 808 transmits the response to an outbound communication module 814 to communicate the response to the user via a desired form of communication, such as, but not limited to, email, SMS, or phone.

[0086] According to an aspect of the present disclosure, the data mining system may provide an ability for managers or high level user to subdivide the analysis into discrete, secure

modules. A variety of permissions can be assigned to the analysts to control both the input and processed data. FIGURE 9 illustrates a flow diagram for the levels of security.

[0087] For example, as shown in FIGURE 9, a user designated as an administrator may have access to all of the data obtained via the system. The administrator may be referred to as a level 1 user. The administrator may provide specific permissions to level 2 users, such as a first manager (manager 1) and a second manager (manager 2). The managers may have the same access as the administrator or may have less access than the administrator. Furthermore, the levels of access for each manager may be the same as or different from each other. The managers may then control the level of access by each data analyst (Analysts A-D). The levels of access for each analysis may be the same as or different from each other.

[0088] As previously discussed, extractors may be deployed on target data sources. The data extracted by the extractors may be transmitted to a cloud-based infrastructure. The cloud-based infrastructure allows for on-demand scaling of resources and deployment of multiple extractors that may be processed in parallel.

[0089] The dynamic parallel computing structure may be used to process data without impeding speed. Specifically, the extractors and data analysis modules are dynamically configurable between sequential and parallel processing to improve efficiency.

[0090] FIGURE 10A illustrates a typical sequential data extraction system. As shown in FIGURE 10A data sources (e.g., data source 1 - data source n) are sequentially analyzed. More specifically, each record (e.g., record 1 - record n) of the data source is extracted one record at a time. The records to one record in a data source, such as a web page, database entry, etc. The speed of the extraction is limited by the speed of the processor(s). After extracting the record from a data source, the record is written to a data base.

[0091] Furthermore, as shown in FIGURE 10B, a sentiment analysis module may also be specified to process each extracted page. The sentiment analysis module may also be a data analysis module. As shown in FIGURE 10B, each extracted data source (e.g., data source 1 - data source n) is sequentially analyzed by the sentiment analysis module. The sentiment analysis module may receive an input from the lexicon module. The records processed by the sentiment analysis module may be output from each sentiment analysis module for further processing.

[0092] Although sequential processing is a very straightforward approach to data-mining and analysis, it is limited by processing speed. For example, various sub-processes may be slower than others, leading to bottlenecks in the system. Moreover, page extraction speed (X) may be faster than the sentiment analysis processing speed (Y), thus leading to bottlenecks.

[0093] In one configuration, as shown in FIGURE 10C, scalable processing capabilities are specified by deploying multiple instances/sub-sentries to perform sentiment analysis processing in parallel. As shown in FIGURE 10C, multiple sentiment analysis modules may be deployed to analyze the records of the extracted data in parallel. In FIGURE 10C, the sentiment analysis module may receive an input from the lexicon module. The records processed by the sentiment analysis module may be output from each sentiment analysis module for further processing.

[0094] In one example, based on the present configuration, if the extraction speed is four times the sentiment analysis processing speed, 4 sub-sentries may be deployed to perform the sentiment analysis in parallel. Additional sub-sentries may be deployed for buffering needs. In another configuration, if the sentiment analysis processing speed is limited by a large lexicon, sub-sentries may be deployed to process a portion of the lexicon, in parallel. The data mining system of the aspects of the present disclosure monitors the speed of each sub-process, which is input into a controller that dynamically allocates parallel processing instances on-demand.

[0095] The data mining system described in the aspects of the present disclosure may obtain large amounts of data with varying levels of sensitivity. That is, some information may include customer sensitive data or data that should only be viewed by individuals have varying degrees of clearance. Thus, it may be desirable to provide a data security system that may be modified based on the procedures of a client of the data mining system.

[0096] As previously discussed, the data mining system described in the various aspects of the present disclosure may be used to mine and analyze various forms of data. Provided below are various examples of how the data mining system may be used by governments, individuals, corporations, and/or any desired user. Of course, the use of the data mining system of the present application is not limited to the discussed examples.

[0097] In one configuration, the data mining system may be used by a government and/or intelligence agency to monitor global hot spots. For example, governments and/or intelligence

agencies may move through vast amounts and types of data, and in multiple languages to find patterns indicating the likelihood of domestic unrest, or the next terrorist attack. However, integrating and manually analyzing multiple data sources in real time is technically challenging, time intensive, and marred by human bias, oversight, and even fraud.

[0098] The data mining system described in aspects of the present disclosure finds, monitors, and summarizes the information needed to make the most informed decision in real time. Rather than relying on the manual sifting and analysis of intelligence, data mining system of the present application may use a combination of rules engines and artificial intelligence schemes to detect threat patterns within large datasets before problems reach a tipping point. Through iterations of searches and search results, the data mining system learns to filter data noise and refine queries to prioritize the most relevant results.

[0099] The data mining system described in aspects of the present disclosure may determine political sentiment by sampling mass media conversations in any language. Social media outlets, such as Twitter, may be monitored via the data extractors to identify user-defined events, shifts in traffic volume, and/or sentiment. The data mining system may report frequencies on topics, entities, and persons of interest, which may signal the development of a physical event posing a risk to public security.

[00100] After identifying a user-defined event, the data mining system notifies the appropriate personnel in real time, communicating the event type, location, and optimal response strategy via a communication channel, such as email or SMS.

[00101] In addition to monitoring mass online conversations and their physical impact, in one configuration, the data mining system may also monitor a specific individual. That is, the data mining system may analyze, verify, and cross check a person of interest's information, such as travel, financial, vital, and law enforcement records to identify patterns indicative of fraud, criminal activity, or other threatening behavior. The data mining system may then build a person of interest profile based on verifiable intelligence determined from all available institutional and open-source data feeds, including social media.

[00102] As an example, an intelligence agency may monitor sentiment of specific topics and/or groups during. In this example, the intelligence agency would have developed a query for monitoring sentiment of a topic/group. For example, the query may be "show me people upset

with the government.” In some cases, the query may be further refined to a specific group and/or a specific location.

[00103] After the query has been selected, the query may be expanded based on lexical and rule-set based techniques to search structured and unstructured datasets for the keywords of the query. Specifically, the expanded query may generate a topic of interest in addition to sub-topics. The expanded query may then be run on open-source data and closed-source data. After the first pass of the search, the user may expand the topic of interest based on unintended search results.

[00104] That is, after the first pass of the search, the use may add additional topics and/or sub-topics in addition to narrowing the search to specific sources. After the search has been narrowed to a desired results threshold, the data extractors are deployed to the selected data sources for monitoring of the data sources.

[00105] As an example, the user may have searched for “Arab Spring” as a topic of interest with “unrest” as sub-topics. In this example, a search of the topic of interest and other sub-topics may have generated unintended search results such as results related to social revolutions. Therefore, the user may determine to add “revolution” as sub-topics to a search. Additionally, other false positives may include topics that are not related to the topic of interest. For example, a search for a search of “Arab spring” and other sub-topics may have generated unintended search results such as “Arab spring water” or sources related to the spring season in the Middle East. Accordingly, sources related to these false positives may be excluded from further iterations of the search.

[00106] FIGURE 11 illustrates an example of data from a data source that is identified by a sentry. The sentry may identify a phrase from a message and/or image posted on a data source, such as a message board and/or a social media site. Specifically, as shown in FIGURE 11, the sentry may detect a post 1102 in data source, such as a message board. The post may include an image 1104 and text 1106. In the example data of FIGURE 11, the image 1104 is an image of protestors with a billboard. The post 1102 may have been identified based on key words in the text 1106. For example, the key words may have been “strength” and “opposition.” Once the post 1102 has been identified, the text 1106 may be analyzed by a data analysis module or a

sentiment module. In one configuration, the sentiment is analyzed by the data analysis module 208 and/or a sentiment weight module 1108.

[00107] The sentiment analysis assigns weights (e.g., scores) to specific words or phrases that are extracted from a data source. As previously discussed, positive words are assigned a value from 1 to X and negative words are assigned a value from -1 to -Y. Positive words refer to words that indicate a positive sentiment, such as “good,” “happy,” etc. Negative words refer to words that indicate a negative sentiment, such as “hate,” “angry,” etc. The more positive or negative the word, the higher the value. For example, the positive word “good” may be assigned a value of 1 while the positive word “fantastic” may be assigned a value of 3. The value assignment may be set by the user or pre-defined based on a specific vernacular.

[00108] In the exemplary data shown in FIGURE 11, the key words in the text 1106 may be analyzed by the sentiment weight module 1108. The sentiment weight module 1108 may assign a sentiment weight to the words and/or phrases extracted from the text 1106. In this example, the words “opposition” and “strength” are both given a weight of -1. Thus, based on the analysis of the sentiment weight module 1108 a user and/or the data mining system may determine that the detected post 1102 carries a negative sentiment. The total sentiment weight for the extracted data may be the sum of all sentiment weight. In this example, the total sentiment weight is -2 (e.g., sum of “opposition” sentiment weight (-1) and “strength” sentiment weight (-1)).

[00109] In one configuration, after determining a total sentiment weight for extracted data, the data analysis module, user, and/or data mining system may determine whether to proceed with a second pass for sentiment analysis.

[00110] Specifically, in one configuration, for the second pass, the data analysis module performs a more formal computational linguistic analysis to dive deeper into the textual opinions. The second pass may use a natural language processing toolsets on the native script to process and determine sentiment including lemmatization (root-finding), semantic feature analysis, statistical processing to discover patterns, etc. In one aspect of the disclosure, linguistic patterns are specified to populate the topic and modifier tables and create custom lexicons. After the first pass, the system can then reprocess the opinionated text string (OTS) with the improved

tables and increase accuracy. The opinionated text string refers to the set of words where the author holds the opinion.

[00111] In the exemplary data shown in FIGURE 11, during the second pass, the sign 1110 in the image 1104 may be analyzed to determine the sentiment of the text in the sign 1110. In this example, the key words of the sign, such as, “change,” “constitutions,” and “tyrants,” may be given sentiment weights. In one configuration, after determining the total sentiment weight from the second pass, the data analysis module determines to extract the user info for the post for further analysis. In this configuration, the data analysis module determines that the user information should be extracted when the total sentiment weight is above a threshold. The thresholds may be set for positive and/or negative sentiment weights.

[00112] The user information may be extracted via an information extraction module 1112. The information extraction module 1112 may be part of the data analysis module, sentiment weight module 1108, and/or a distinct module. The information that is extracted may include the username, actual name, age, location, and/or any other information related to the user that posted the data. In one configuration the extracted information may be used for a new query to follow the user that posted the data.

[00113] It should be noted that although FIGURE 11 shows the data in English, the aspects of the present disclosure may be applied to data of any language.

[00114] In one configuration, after the sentiment of the data is analyzed, quality control is specified for the results of the sentiment. That is, the data and the sentiment weights may be transmitted to a quality control module. A user may review the data transmitted to the quality control module to determine whether the proper sentiment weights were specified for the extracted data. Specifically, the user may determine whether the sentiment analysis missed specific words, gave weights to false positives, and/or applied the wrong weights to specific words. Based on the user analysis, the sentiment analysis may be provided with a quality control value, such as a percentage.

[00115] Furthermore, based on the on the user analysis, the lexicon modules and/or sentiment analysis modules may be updated to correct missed words, false positives, incorrect analysis, and/or any other detected errors. After updating the lexicon modules and/or sentiment analysis modules, the sentiment analysis may be subsequently performed. The results of the

subsequent sentiment analysis may be further analyzed by a user. The iterations of the sentiment analysis may be performed until the quality control value is equal to or greater than a threshold.

[00116] As shown in FIGURE 11, in one configuration, the data mining system may be specified to determine political sentiment. Still, in another configuration, the data mining system of the present application may be used for customer service purposes and/or revenue enhancement services. In one configuration, a revenue enhancement service (RES) platform is an end-to-end big solution that generates actionable intelligence and executes individually targeted outreach strategies. The RES platform may use predictive analytics, natural language processing, and automated engagement capabilities, to increase revenue by improving sales, identifying emerging trends, and or streamlining customer interaction.

[00117] Consumers may generate large amounts of data that indicate how they spend, what they desire, and where and how they engage. In one configuration, the data mining system may continuously monitors the customer information from data sources, such as social media, web feeds, customer feedback, internal company databases, and proprietary data silos. In this configuration, the data mining system extracts attributes for each customer, such as financial profiles and retail history, to social influences and expressed interests. The RES continues to monitor and analyze the data for product sentiment, consumer patterns, and purchasing behaviors to build customer profiles and generate market intelligence in real-time. Using this intelligence, the customer of the data mining system may determine what are the most likely products and services that each customer is looking for as well as ways to engage with that particular customer.

[00118] In one configuration, based on the data retrieved via the data mining system, a company may improve product placement or determine design trends. Moreover, the customer may communicate with the company through their choice of interaction medium (e.g., SMS, email, voice, avatar chat, or a combination thereof) so that the customer may ask questions, resolve issues, and express satisfaction/dissatisfaction. Furthermore, the RES platform may determine customer profiles as well as customer sentiment so customer communications may be accurately routed for the appropriate response. That is, companies may improve outreach to engage with customers knowing who they are, how they feel and what they need.

[00119] FIGURE 12 illustrates an exemplary flow chart 1200 for determining user sentiment based on an aspect of the present disclosure. As shown in FIGURE 12, at block 1202 an individual may post data on a data source, such as a public forum or social media. In this example, the data is an indication of a phone user's sentiment for their phone service, specifically, "my phone service is terrible." At block 1204 an extractor that is monitoring the data source determines that the data post of block 1202 matches the query, therefore, the data extractor extracts the data and transmits the data to the data analysis module. At block 1206 a data analysis module analyzes the data to determine the sentiment of the post. At block 1208 the data analysis module outputs the sentiment word, such as "terrible," and the sentiment weight, such as "-1". Based on the analysis of the data analysis module, a customer communication module may determine an appropriate response. The response may be determined based on the determined sentiment.

[00120] In yet another configuration, the data mining system may be used to determine fraud, waste, and/or abuse of a system. In one configuration, the data mining system uses pattern detection based on historical data and correlating factors in datasets to determine potential fraud, waste, and/or abuse of a system. For example, the data mining system may be used in a health care or insurance system to analyze for fraud and/or abuse.

[00121] In one configuration, the data mining system is specified to analyze reported claims. The contents of the claim, such as user information, claim type, injury type, etc. are queried at data sources. The data sources may include a health provider data base, subscriber data base, and/or affiliate data base. The query is specified to determine whether the submitted claim has specific fraud characteristics. If it is determined that a claim has fraud characteristics, the data mining system may take appropriate actions, such as notifying an investigation, denying the claim, and/or flagging the claim for further monitoring. In one configuration, when a claim does not have fraud characteristics, the claim may still be flagged so that the individual that made the claim is monitored for future activity.

[00122] Those of skill would further appreciate that the various illustrative logical blocks, modules, circuits, and algorithm steps described in connection with the disclosure herein may be implemented as electronic hardware, computer software, or combinations of both. To clearly illustrate this interchangeability of hardware and software, various illustrative components,

blocks, modules, circuits, and steps have been described above generally in terms of their functionality. Whether such functionality is implemented as hardware or software depends upon the particular application and design constraints imposed on the overall system. Skilled artisans may implement the described functionality in varying ways for each particular application, but such implementation decisions should not be interpreted as causing a departure from the scope of the present disclosure.

[00123] The various illustrative logical blocks, modules, and circuits described in connection with the disclosure herein may be implemented or performed with a general-purpose processor, a digital signal processor (DSP), an application specific integrated circuit (ASIC), a field programmable gate array (FPGA) or other programmable logic device, discrete gate or transistor logic, discrete hardware components, or any combination thereof designed to perform the functions described herein. A general-purpose processor may be a microprocessor, but in the alternative, the processor may be any conventional processor, controller, microcontroller, or state machine. A processor may also be implemented as a combination of computing devices, e.g., a combination of a DSP and a microprocessor, a plurality of microprocessors, one or more microprocessors in conjunction with a DSP core, or any other such configuration.

[00124] The steps of a method or algorithm described in connection with the disclosure herein may be embodied directly in hardware, in a software module executed by a processor, or in a combination of the two. A software module may reside in RAM memory, flash memory, ROM memory, EPROM memory, EEPROM memory, registers, hard disk, a removable disk, a CD-ROM, or any other form of storage medium known in the art. An exemplary storage medium is coupled to the processor such that the processor can read information from, and write information to, the storage medium. In the alternative, the storage medium may be integral to the processor. The processor and the storage medium may reside in an ASIC. The ASIC may reside in a user terminal. In the alternative, the processor and the storage medium may reside as discrete components in a user terminal.

[00125] In one or more exemplary designs, the functions described may be implemented in hardware, software, firmware, or any combination thereof. If implemented in software, the functions may be stored on or transmitted over as one or more instructions or code on a computer-readable medium. Computer-readable media includes both computer storage media

and communication media including any medium that facilitates transfer of a computer program from one place to another. A storage media may be any available media that can be accessed by a general purpose or special purpose computer. By way of example, and not limitation, such computer-readable media can comprise RAM, ROM, EEPROM, CD-ROM or other optical disk storage, magnetic disk storage or other magnetic storage devices, or any other medium that can be used to carry or store desired program code means in the form of instructions or data structures and that can be accessed by a general-purpose or special-purpose computer, or a general-purpose or special-purpose processor. Also, any connection is properly termed a computer-readable medium. For example, if the software is transmitted from a website, server, or other remote source using a coaxial cable, fiber optic cable, twisted pair, digital subscriber line (DSL), or wireless technologies such as infrared, radio, and microwave, then the coaxial cable, fiber optic cable, twisted pair, DSL, or wireless technologies such as infrared, radio, and microwave are included in the definition of medium. Disk and disc, as used herein, includes compact disc (CD), laser disc, optical disc, digital versatile disc (DVD), floppy disk and blu-ray disc where disks usually reproduce data magnetically, while discs reproduce data optically with lasers. Combinations of the above should also be included within the scope of computer-readable media.

[00126] The previous description of the disclosure is provided to enable any person skilled in the art to make or use the disclosure. Various modifications to the disclosure will be readily apparent to those skilled in the art, and the generic principles defined herein may be applied to other variations without departing from the spirit or scope of the disclosure. Thus, the disclosure is not intended to be limited to the examples and designs described herein but is to be accorded the widest scope consistent with the principles and novel features disclosed herein.

CLAIMS

WHAT IS CLAIMED IS:

1. A method of analyzing data, comprising:
generating a query based at least in part on a topic of interest;
expanding search terms of the query;
executing the query on a plurality of data sources; and
monitoring at least one specific data source selected from the plurality of data sources for matches to the query.
2. The method of claim 1, further comprising
extracting data from the at least one monitored specific data source;
analyzing the extracted data;
establishing a communication channel with a user based at least in part on the analyzed data; and
receiving feedback from the user based at least in part on the generated feedback.
3. The method of claim 2, further comprising visualizing at least the extracted data, the analyzed data, or a combination thereof.
4. The method of claim 1, in which expanding the query comprises expanding the search terms to include at least misspellings, synonyms, sub-topics, antonyms, or a combination thereof.
5. The method of claim 1, further comprising:
refining the search terms based at least in part on the executed query, and in which the monitoring is performed to monitor for matches to a refined query.
6. The method of claim 1, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that are not publically accessible.

7. The method of claim 1, in which the query is a natural language query, and further comprising translating the query to a system understood language.
8. The method of claim 1, in which the plurality of data sources are pre-defined.
9. The method of claim 1, in which the monitoring comprises deploying extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source.
10. An apparatus configured to analyze data, the apparatus comprising:
a memory unit; and
at least one processor coupled to the memory unit, in which the at least one processor is configured:
 - to generate a query based at least in part on a topic of interest;
 - to expand search terms of the query;
 - to execute the query on a plurality of data sources; and
 - to monitor at least one specific data source selected from the plurality of data sources for matches to the query.
11. The apparatus of claim 10, in which the at least one processor is further configured:
 - to extract data from the at least one monitored specific data source;
 - to analyze the extracted data;
 - to establish a communication channel with a user based at least in part on the analyzed data; and
 - to receive feedback from the user based at least in part on the generated feedback.
12. The apparatus of claim 11, in which the at least one processor is further configured to visualize at least the extracted data, the analyzed data, or a combination thereof.

13. The apparatus of claim 11, in which the at least one processor is further configured to expand the search terms to include at least misspelling, synonyms, sub-topics, antonyms, or a combination thereof.

14. The apparatus of claim 11, in which the at least one processor is further configured:
to refine the search terms based at least in part on the executed query, and
to monitor for matches to a refined query.

15. The apparatus of claim 11, in which the plurality of data sources include open-source data sources that are publically available and closed-source data sources that are not publically accessible.

16. The apparatus of claim 11, in which the query is a natural language query, and in which the at least one processor is further configured to translate the query to a system understood language.

17. The apparatus of claim 11, in which the plurality of data sources are pre-defined.

18. The apparatus of claim 11, in which the at least one processor is further configured to deploy extractors to each of specific data source, a number of extractors being dynamic based at least in part on a traffic volume of each specific data source.

19. A computer program product for data analysis, the computer program product comprising:

a non-transitory computer-readable medium having program code recorded thereon, the program code comprising:

program code to generate a query based at least in part on a topic of interest;

program code to expand search terms of the query;

program code to execute the query on a plurality of data sources; and

program code to monitor at least one specific data source selected from the plurality of data sources for matches to the query.

20. The computer program of claim 19, further comprising:
program code to extract data from the at least one monitored specific data source;
program code to analyze the extracted data;
program code to establish a communication channel with a user based at least in part on the analyzed data; and
program code to receive feedback from the user based at least in part on the generated feedback.

21. The computer program of claim 19, further comprising:
program code to refine the search terms based at least in part on the executed query, and
program code to monitor for matches to a refined query.

ABSTRACT

A method of analyzing data is presented. The method includes generating a query based on a topic of interest, expanding search terms of the query, executing the query on one or more data sources, monitoring a specific data source selected from the one or more data sources. The monitoring is performed to monitor for matches to the query.

DECLARATION (37 CFR 1.63) FOR UTILITY OR DESIGN APPLICATION USING AN APPLICATION DATA SHEET (37 CFR 1.76)

Title of Invention	REAL-TIME AND ADAPTIVE DATA MINING
---------------------------	---

As the below named inventor, I hereby declare that:

This declaration is directed to: ☒ The attached application, or
☐ United States application or PCT international application number _____
 filed on _____

The above-identified application was made or authorized to be made by me.

I believe that I am the original inventor or an original joint inventor of a claimed invention in the application.

I hereby acknowledge that any willful false statement made in this declaration is punishable under 18 U.S.C. 1001 by fine or imprisonment of not more than five (5) years, or both.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

LEGAL NAME OF INVENTOR

Inventor: Sharon Gill CHADHA Date (Optional) 19 June 2013

Signature: 

Note: An application data sheet (PTO/SB/14 or equivalent), including naming the entire inventive entity, must accompany this form or must have been previously filed. Use an additional PTO/AIA/01 form for each additional inventor.

This collection of information is required by 35 U.S.C. 115 and 37 CFR 1.63. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1 minute to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.
