

U.S. PATENT NO. 10,425,697 V/S Genius Sports Ltd.

I. INTRODUCTION

The chart below demonstrates how Defendant Genius Sports Ltd. (“Defendant” or “Genius Sports”) as well as Defendant’s partners, customers, and end users of the products and features discussed below, directly infringe, either literally or under the doctrine of equivalents, at least claims 19 and 20 of U.S. Patent No. 10,425,697 (“the ’697 Patent”). Defendant and Defendant’s partners, customers, and end users directly infringe the identified claims at least by making, using, selling, installing, configuring to operate, importing, testing, and/or offering to sell at least Defendant’s Genius Sports Platform and other offerings and services that integrate with Defendant’s Genius Sports Platform (collectively, “the Accused Products”) either alone, and/or when installed and operated as designed and intended on a computer system or network, as detailed below.

Each element of each asserted claim is presently alleged to be literally present. Because discovery is still ongoing and the Asserted Claims have not yet been construed, SportsCastr Inc. (d/b/a PANDA Interactive) (“Plaintiff” or “PANDA”) reserves the right to supplement its contentions, including with respect to the Doctrine of Equivalents as appropriate. In addition, any of Defendant’s products that perform similar functions and/or incorporate or rely on the same or similar functionality (for example, without limitation, any predecessor or successor products performing the same functions in the same ways or products which use the same software, plugins, or libraries or call the functions underlying the operations identified below) as the Accused Products also infringe in the manner set out below.

Defendant directly infringes at least claims 19 and 20 of the ’697 Patent, either literally or under the doctrine of equivalents, by making, using, offering to sell and selling the systems described below. Defendant’s partners, customers, and end users of its Accused Products and corresponding systems and services directly infringe at least claims 1 and 4 of the ’697 Patent, literally or under the doctrine of equivalents, at least by using the Accused Products and corresponding systems and services, as described below.

Defendant has actively induced and are actively inducing infringement of at least claims 19 and 20 of the ’697 Patent with specific intent to induce infringement, and/or willful blindness to the possibility that its acts induce infringement, in violation of 35 U.S.C. § 271(b). For example, Defendants encourages and induces customers to use the Genius Sports Platform in a manner that infringes claims 19 and 20 of the ’697 Patent at least by offering and providing the software and by engaging in activities relating to selling, marketing, advertising, promotion, installation, support, and distribution of the Accused Products.

Defendant encourages, instructs, directs, and/or requires third parties—including its certified partners and/or customers—to use the Accused Products in infringing ways. Defendants further encourages and induces its customers to infringe claims 1 and 4 of the ’697 Patent: 1) by widely advertising those services, and providing technical support and instructions to users, and 2) through activities

relating to marketing, advertising, promotion, installation, support, and distribution of the Accused Products, including its video streaming software, and services in the United States. (See PANDA_000055-PANDA_000064, <https://www.geniussports.com/sportsbook/streaming/>.) Further, as the entity that provides installation, implementation, and integration of the Accused Products in addition to ensuring the Accused Product remains operational for each customer through ongoing technical support, on information and belief, Defendant and/or its partners affirmatively aid and abet each customer's use of the Accused Products in a manner that infringes the '697 Patent.

Defendant also contributes to the infringement of its partners, customers, and end-users of the Accused Products by providing within the United States or importing into the United States the Accused Products, constituting a material part of the inventions claimed, and not a staple article or commodity of commerce suitable for substantial non-infringing uses. Indeed, as shown below, the Accused Products have no substantial non-infringing uses because the accused functionality, including the one-to-many socket architecture and separate channels for video and event information, is an integral part of the Accused Products and must be performed for the Accused Products to perform their intended purpose. These functionalities are continually running when the system is in use and, on information and belief, cannot be removed or disabled (or, if they could, the system would no longer suitably function for its intended purpose). Moreover, for the same reasons, without the system and components identified below that practice the '697 Patent, that functionality could not be performed. Additionally, the accused functionality, including the one-to-many socket architecture and separate channels for video and event information, itself has no substantial non-infringing uses because the components, modules and methods identified below are a necessary part of that functionality. For example, without the on-to-many socket architecture, the Accused Products could not effectively synchronize the event information across multiple viewers. These functionalities are continually running when the system is in use and cannot be removed or disabled (or, if they could, the system would no longer suitably function for its intended purpose). Moreover, for the same reasons, without the system and components identified below that practice claimed in the '697 Patent, that functionality could not be performed.

Indeed, as shown below, the Accused Products have no substantial non-infringing uses because the accused functionality is an integral part of the Accused Products and must be performed for the Accused Products to perform their intended purpose. For example, at least the functionalities and corresponding modules (whether software and/or hardware) described below have no suitable non-infringing use and form a material part of the Accused Products. In other words, when each of the Accused Products operates, the functions below are performed. Moreover, when the functionality and modules specifically described below are operated, they perform the steps described below. The Accused Products (and the specific modules and functionalities described herein) are designed and intended specifically to perform the inventions claimed in the Asserted Claims, and do not have any other purpose. For example, the Accused Products and accused functionalities (e.g., the one-to-many architecture) constitute a material part of the inventions claimed

because such architecture is integral to the system as recited in the claims of the '697 Patent. None of these products are staple goods—they are sophisticated and customized video streaming products, methods, and systems.

Plaintiff provides the following example claim charts based on currently available information, including through public sources. Plaintiff reserves the right to modify, amend, or supplement these claim charts should it become aware of additional information regarding the Accused Products and systems, including through discovery, or should one or more claims be construed in a manner differently than interpreted herein.

II. CLAIM CHARTS

1. Independent Claim 19

Key Features	Accused Product
[19P] A system for providing a first plurality of copies of a first broadcaster's live stream of digital content including first video-based commentary about a first live sporting event from a first broadcaster client device to a first plurality of viewer client devices, and for providing a second plurality of copies of a second broadcaster's live stream of digital content including second video-based commentary about a second live sporting event from a second broadcaster	Genius Sports' streaming product practices a system for providing, <i>"a first plurality of copies of a first broadcaster's live stream of digital content including first video-based commentary about a first live sporting event from a first broadcaster client device to a first plurality of viewer client devices, and for providing a second plurality of copies of a second broadcaster's live stream of digital content including second video-based commentary about a second live sporting event from a second broadcaster client device to a second plurality of viewer client devices."</i> For example, Genius Sports' streaming product includes both a live stream of a sporting event and overlayed event information related to the sporting event.

Key Features	Accused Product
client device to a second plurality of viewer client devices, the system comprising:	 Video wins every time When it comes to keeping sports fans' attention, video content is king. Acquire fans. Drive engagement. Watch your sportsbook grow. (See, PANDA_000055 at PANDA_000057, https://www.geniussports.com/sportsbook/streaming/.) The overlaid event information includes, e.g., Milestones, Leaderboards, Highs, Probabilities, team information (e.g., team names, abbreviations, and/or logos), score information (e.g., with essentially real-time score updates synchronized with the video-based commentary), player information, venue information, game status information (e.g., on-base, at-bat, timeouts, fouls, pole position, yards-to-go, yards-to-goal, down, team statistics, player statistics, historical data, etc.).

Key Features	Accused Product
	 (See, PANDA_000015, https://investors.geniussports.com/news/news-details/2019/Betgenius-launches-live-streaming-service-for-sportsbooks/default.aspx.) Genius Sports’ streaming product combines live sports data and live sports video. As stated below, Genius Sports’ streaming product pairs “video, captured direct from pitch or courtside ... with official data and live betting services...”:

Key Features	Accused Product
	<i>New content is complemented by complete official data offering and will plug crucial gaps in in-play betting schedules – bet365 among the first to go live with the product.</i> Betgenius, a leading supplier of data and trading services to sportsbooks, has launched a live streaming service giving operators access to new content from sport competitions around the world. Derived from partnerships with official rights holder across multiple sports, the service features thousands of low latency streams including content which has never before been available to sportsbooks. By focusing on fixtures played at off-peak times, the service allows operators to offer a more engaging experience right around the clock, enhancing bet placement and customer retention during quiet scheduling periods. <i>All video, captured direct from pitch or courtside, is paired with official data and live betting services, and features easy-access API integration.</i> International operator bet365 is among the first sportsbooks to go live with the product, with more to be announced in the coming weeks. Jack Davison, Chief Commercial Officer at Genius Sports Group, said: “Our close relationships with sports rights holders across the world have given us access to new, high quality streaming content which will significantly enhance our sportsbook partners’ in-play products. “Combined with fast, accurate data on thousands of fixtures, this is a new and cost-effective way to attract more customers with a complete and immersive live betting experience.” (See, PANDA_000015-PANDA_000016, https://investors.geniussports.com/news/news-details/2019/Betgenius-launches-live-streaming-service-for-sportsbooks/default.aspx.) As described below, Genius Sports delivers “thousands of low latency live streams” from top tier football leagues across Argentina, Colombia, Iceland and China, as well as dozens of FIBA basketball and FIVB volleyball leagues globally. Genius Sports Limited (“Genius Sports”), the official data, technology and broadcast partner that powers the ecosystem connecting sports, betting and media, has agreed to a major expansion of its long-term partnership with Tipsport, a leading Czech sportsbook operator across retail and online. Tipsport has agreed to a substantial uplift in the number of annual events covered by Genius Sports’ suite of data-driven PreMatch, LiveData and LiveTrading solutions while maintaining full flexibility and control over each element of its sportsbook. Powered by the highest quality data, Genius Sports will deliver real-time feeds and pin-point pricing for hundreds of competitions, including the EPL, NCAA Basketball, Euroleague Basketball and the NFL. Tipsport will have access to Genius Sports’ full NFL product suite, including access to the league’s real-time statistics, proprietary Next Gen Stats (NGS) and official sports betting data feed. <i>Genius Sports will also deliver thousands of low latency streams through its rapidly expanding Streaming solution. Tipsport customers will benefit from an enhanced live betting experience through live streams of top tier football leagues across Argentina, Colombia, Iceland and China, as well as dozens of FIBA basketball and FIVB volleyball leagues globally.</i> (See, PANDA_000176-PANDA_000177, https://geniussports.com/newsroom/genius-sports-builds-out-

Key Features	Accused Product
	official-data-trading-and-live-streaming-partnership-with-tipsport/.) Further, the Accused Products are used by Genius Sports and/or in connections with its partners and/or customers, such as broadcasters, to “[c]apture live footage, create engaging video and distribute it around the world” for broadcasters and streaming platform or rights holders:  The screenshot shows a website with a red background. On the left, the text 'Video' is at the top, followed by the large heading 'Change how the world sees sport'. Below this, a paragraph reads: 'Capture live footage, create engaging video and distribute it around the world. Whether you're a broadcaster, a streaming platform or rights holder, you can give your audience what they want. The game.' At the bottom of this section is a button that says 'Speak to our experts'. On the right side of the screenshot is a blue sidebar menu with the Genius Sports logo at the top. The menu items are: General, Contacts, Settings, Discipline, Teams, and Documents. The main content area of the sidebar shows a live football game in progress, with the CFL logo and 'CFL FOOTBALL LEAGUE' text at the top. (See, PANDA_000069, https://geniussports.com/video/.) On information and belief, Genius Sports partners with one or more broadcasters to use, offer for sale, and/or sell the Accused Products:

Key Features	Accused Product
	We work with partners worldwide  (See, PANDA_000069 at PANDA_000074-75, https://geniussports.com/video/.) We work with the biggest media players in sport  (See, PANDA_000021 at PANDA_000025, https://geniussports.com/publishers-broadcasters/.) On information and belief, the Accused Products provide a first and second plurality of copies of a first and second broadcaster's live stream of digital content including first and second video-based commentary about a first and second live sporting event from a first and second broadcaster client device to a first and second plurality of viewer client devices.

Key Features	Accused Product
	Give fans what they care about People want to know more. How often are the players passing? Who had the most possession? So track key data about the players, like their speeds and shot velocity. And use that to add graphics and live animations.  (See, PANDA_000098 at PANDA_000101, https://geniussports.com/video/production/.) 1 Keep viewers informed Offer producers and presenters pointers based on pre-match data and analysis, helping them explain the subtle nuances of a coach's strategy. 2 Power visualisations with data Give your video that extra push. Visualise key moments and statistics in real time with animations and content specific to your viewers. 3 Tell the full story Dig deeper into every sports story. Producers, editors and fans can create hundreds of stories in minutes through simple web interfaces or embeddable UIs. (See, PANDA_000098 at PANDA_000101-102, https://geniussports.com/video/production/.)

Key Features	Accused Product
	BT Sport augments broadcasts with tracking data  (See, PANDA_000004, https://geniussports.com/customer-stories/bt-sport-augments-coverage-with-tracking-data/.)  Team Talk Personalisation and rich data are pivotal to the future of sports broadcasting. With fans wanting more control and greater levels of insight than ever before, BT Sport set out to launch a new Matchday Experience tool to transform its coverage of the English Premier League (EPL). The major UK broadcaster needed a solution that would be: • Immersive and informative fan experiences • Editorially relevant with insights that meet fans' demands to better understand games • Ready for the rollout of 5G and suitable for Premier League fans of all ages (See, PANDA_000004 at PANDA_000005, https://geniussports.com/customer-stories/bt-sport-augments-coverage-with-tracking-data/.)

Key Features	Accused Product
	Get set up in 30 mins If you're looking for the simple solution, then you need GeniusLive. A single fixed camera, with full-HD streaming, which doesn't need a camera team and automatically adds the scoreboard to the screen. You also get a handheld camera to grab that behind-the-scenes footage: team talks, coach reactions and post-game interviews. (See, PANDA_000084 at PANDA_000088, https://geniussports.com/video/capture/.) GeniusLive in action: • 1 camera system, fixed in-venue • Up to full HD video streaming • Unmanned system films the entire court • Installation within 30 minutes • Graphic overlay (scoreboard) • Additional handheld camera to take over video and audio • Integrated with real-time fan engagement tools

Key Features	Accused Product
	(See, PANDA_000084 at PANDA_000089, https://geniussports.com/video/capture/.) Broadcast the full picture Need that extra touch? GeniusLive+ gives you everything you need. Create streams that rival TV. Add graphic overlays and post-match highlights. Capture the entire pitch, with a 180° panoramic camera. And even throw in live commentary and extra cameras from around the venue. All automatically.  (See, PANDA_000084 at PANDA_000090, https://geniussports.com/video/capture/.)  GeniusLive+ in action: • Live and on-demand video in full HD • Fully-automated production for every game and training session at the venue • Full-pitch panoramic view through our unique camera head that captures 180° in high resolution • Automated on-screen graphics and post-match highlights • Enhanced production with additional cameras located around the venue and live commentary

Key Features	Accused Product
	(See, PANDA_000084 at PANDA_000091, https://geniussports.com/video/capture/.) The NFL appointed Genius Sports in April 2021 as its exclusive worldwide distributor of real-time official play-by-play statistics, proprietary Next Gen Stats (NGS) data, and the League’s official sports betting data feed to media companies and sportsbooks in regulated markets. This partnership included the rights for Genius Sports to distribute low latency video feeds to sportsbooks in key international markets, which has now been expanded to include the U.S. As a first of its kind in the U.S., Caesars Sportsbook will offer official data-driven in-game betting opportunities and player props alongside live video streams of NFL games to give their customers access to the most compelling in-play NFL betting experience available for mobile and tablets. In addition, Caesars Sportsbook will utilize official NFL league and team marks and logos to help promote their live premium content through a fully immersive Watch & Bet live wagering experience. (See, PANDA_000066 at PANDA_000067, https://www.geniussports.com/newsroom/genius-sports-expands-partnership-with-nfl-to-provide-watch-bet-video-streams-for-the-2022-season-starting-with-caesars-entertainment/.)
[19A] a plurality of media sources to: [19A.1] receive the first broadcaster's live stream of digital content and the second broadcaster's live stream of digital content;	On information and belief, Genius Sports’ streaming product includes “<i>a plurality of media sources to receive the first broadcaster's live stream of digital content and the second broadcaster's live stream of digital content.</i>” For example, Genius Sports maintains an expansive portfolio of live sporting event video feeds. As described below, Genius Sports delivers “thousands of low latency live streams” from top tier football leagues across Argentina, Colombia, Iceland and China, as well as dozens of FIBA basketball and FIVB volleyball leagues globally:

Key Features	Accused Product
	Genius Sports Limited ("Genius Sports"), the official data, technology and broadcast partner that powers the ecosystem connecting sports, betting and media, has agreed to a major expansion of its long-term partnership with Tipsport, a leading Czech sportsbook operator across retail and online. media sources and the first viewer client device of the first plurality of viewer client devices; and	(See, PANDA_000015, https://investors.geniussports.com/news/news-details/2019/Betgenius-launches-live-streaming-service-for-sportsbooks/default.aspx.) As stated below, Genius Sports’ streaming product pairs “video, captured direct from pitch or courtside ... with official data and live betting services...”:

Key Features	Accused Product
	<i>New content is complemented by complete official data offering and will plug crucial gaps in in-play betting schedules – bet365 among the first to go live with the product.</i> Betgenius, a leading supplier of data and trading services to sportsbooks, has launched a live streaming service giving operators access to new content from sport competitions around the world. Derived from partnerships with official rights holder across multiple sports, the service features thousands of low latency streams including content which has never before been available to sportsbooks. By focusing on fixtures played at off-peak times, the service allows operators to offer a more engaging experience right around the clock, enhancing bet placement and customer retention during quiet scheduling periods. <i>All video, captured direct from pitch or courtside, is paired with official data and live betting services, and features easy-access API integration.</i> International operator bet365 is among the first sportsbooks to go live with the product, with more to be announced in the coming weeks. Jack Davison, Chief Commercial Officer at Genius Sports Group, said: "Our close relationships with sports rights holders across the world have given us access to new, high quality streaming content which will significantly enhance our sportsbook partners' in-play products. "Combined with fast, accurate data on thousands of fixtures, this is a new and cost-effective way to attract more customers with a complete and immersive live betting experience." (See, PANDA_000015-PANDA_000016, https://investors.geniussports.com/news/news-details/2019/Betgenius-launches-live-streaming-service-for-sportsbooks/default.aspx.) Genius Sports offers two options for sportsbooks to receive their live video stream offerings: (1) a Drop & Play video player developed in-house by Genius Sports that can be embedded in a sportsbook's webpage, and (2) a video API that can facilitate access to Genius Sport's live streams using a sportsbook's own video player. Both options result in a copy of a video stream being provided to a client device. Authentication data (e.g., a URL, token, DRM) is transmitted to the client device and is passed to a video player on the client device (e.g., the video player embedded in a sportsbook's website). The video player then requests and receives a copy of the video stream from an appropriate CDN using the authentication data. <u>Option (1): Drop & Play</u> For this option, Genius Sports provides a video player widget that can be integrated by a sportsbook into their website. When a user/viewer requests a video stream while using the sportsbook's website, the back-end of the sportsbook's website transmits a query to Genius Sport's video API to retrieve authentication data related to the selected video stream. When the sportsbook's website retrieves this information, the authentication data is passed along to the video player, which in turn transmits a request

Key Features	Accused Product
	from a CDN to retrieve the video stream. In this manner, a copy of the video stream is provided to the video player on the viewer client device via a communication channel between the CDN and the viewer client device. This process is depicted below. Insert a script tag defining the desired fixture and the bookmaker source: <pre> 1 <script 2 src="https://genius-live-player-production.betstream.betgenius.com/widgetLoader? customerId=YOUR_CUSTOMER_ID&fixtureId=YOUR_FIXTURE_ID"> 3 </script> </pre> Insert an element with defined id to attach the video player to it, should be the exact same one used as the script containerId parameter <pre> 1 <div id="YOUR_CONTAINER_ID" /> <!-- Defaults to geniusLive if a containerId is not set --> </pre> Add an event listener in your website to listen to the player ready event and when this triggers call our API to retrieve the stream-url and token and hand this response back to our player. Everything else is taken care of How does it work? You embed a script tag in your site with the querystring parameters you are interested in passing to the player. Our player looks at the stream types available for the specific fixture you are trying to display and picks the most appropriate stream for your viewers device. Our script will then raise an event out to the containing window, with the necessary information to make a call to our API from your backend. <i>Our API should never be called from the browser directly.</i> The call to our backend, which is per fixture viewer session, retrieves a url, a token and any DRM information which you may need to play the fixture. You hand the response straight back to our player and it will play the fixture. Sensible HTTP error codes will be returned from our API around the status of the fixture and whether you have booked it.

Key Features	Accused Product
	GL-Video-v3 3.0.31 [Base URL: api.geniussports.com/v1/video-v3/PRODSTD] https://explorer.api.geniussports.com/v1/video-v3/PRODSTD/swagger-latest.json Video Streaming API The video streaming API is used by customers to: • Retrieve the schedule of upcoming streams. • Retrieve the streaming parameters for a particular fixture. • Retrieve the full list of possible regions for playback. This API does not deliver the video stream itself, it only tells what are the specific parameters for streaming a given fixture. It is up to the users of this API to configure a video player with the streaming parameters. This API must never be called from the browser/client side. Instead, the API should be integrated into your server-side systems. This avoids exposing authentication credentials and manage the load on Geniuslive systems. Player integration You will need to add the necessary logic in your web site to call your backend to retrieve the schedule and the streaming parameters described before. Also, you will need to integrate a player in your site that can apply CDN token authentication. For specific competitions your player will also have to decrypt content using DRM. Playing the content Once you have retrieved the schedule and you have selected a fixture to watch, your site should do the following per viewer: 1. Geo-locate the viewer to know the region where the playback is requested 2. Validate if the viewer meets at least one of the permissions required by the selected live stream 3. Select the appropriate delivery to play from the selected live stream. You might need to check the client's platform to choose between HLS or DASH deliveries. 4. Call your backend to get the streaming parameters from the Video API. 5. Play the content using CDN token authentication (and DRM for specific competitions)

[19A.3] provide a first copy of the second plurality of copies to a first viewer client device of the second plurality of viewer client devices via a second Internet communication channel between the plurality of	The Genius Sports’ streaming product includes a plurality of media sources to “provide a first copy of the second plurality of copies to a first viewer client device of the second plurality of viewer client devices via a second Internet communication channel between the plurality of media sources and the first viewer client device of the second plurality of viewer client devices.” See discussion of Claim Element [19A.2], <i>supra</i>.

Key Features	Accused Product
media sources and the first viewer client device of the second plurality of viewer client devices;	For example, a second Internet communication channel is used in the same way described above to provide a first copy of the second plurality of copies to a first viewer client device of the second plurality of viewer client devices.
[19B] a control server to periodically retrieve, via the Internet and from an event information provider, first event information germane to the first live sporting event and second event information germane to the second live sporting event; and	The Genius Sports' streaming product includes <i>"a control server to periodically retrieve, via the Internet and from an event information provider, first event information germane to the first live sporting event and second event information germane to the second live sporting event."</i> For example, Genius Sports' streaming product provides fixture information, such as "Sport, Start (local time of user), Competition, Fixture, FixtureId, Coverage, Lineups, and Assigned", as well as "Statistics." Schedule This is where you select the booked fixtures for viewing. For each fixture, you will see the following information: • Sport - the sport of the fixture • Start (local time of user) - the start time of the match, in <i>your</i> time zone (based on your device's current time). • Competition - the league or tournament to which this match belongs. • Fixture - the teams or competitors in this match. • FixtureId - unique id per fixture per sport • Coverage - indicates whether the event is covered from the Venue or TV • Lineups - indicates whether the event has lineup information or not • Assigned - check this box to add this fixture to your Live tab. The All Fixtures tab displays all available fixtures in your selected date range. The Scheduled Fixtures tab displays only fixtures that you have selected. By default, the Schedule displays fixtures with start times from -3 hours to +12 hours from the current time. Use the Filter button to expand your selection of fixtures, and to filter by coverage type and lineups availability  Not all fixtures from the selected Date Range are loaded at once. The user can see the first batch of fixtures and scrolling down will automatically load more fixtures. (See, PANDA_000196 at PANDA_000198, https://geniussports.atlassian.net/wiki/spaces/BID/pages/1511621214/Live+Viewer+-+User+Manual.)

	Statistics Statistics show the number of events of each type in this match, per side. Clicking the  opens Time Based Statistics filter menu. User can apply only one of the filters from the list, which updates the statistics based on the selected filter. Text with the selected filter is shown in the top right corner of the component • Last 5 mins • Last 10 mins • Last 15 mins • Between 0 - 15 mins • Between 15 - 30 mins • Between 30 - 45 mins • Between 45 - 60 mins • Between 60 - 7 5mins • Between 75- 90 mins • First Half • Second Half • Since last Goal • Since last Red Card • Extra-tme (See, PANDA_000196 at PANDA_000200-PANDA_000201, https://geniussports.atlassian.net/wiki/spaces/BID/pages/1511621214/Live+Viewer+-+User+Manual.) As described below, Genius Sports delivers dozens of FIBA basketball and FIVB volleyball leagues globally.

Key Features	Accused Product
	Genius Sports Limited ("Genius Sports"), the official data, technology and broadcast partner that powers the ecosystem connecting sports, betting and media, has agreed to a major expansion of its long-term partnership with Tipsport, a leading Czech sportsbook operator across retail and online. Tipsport has agreed to a substantial uplift in the number of annual events covered by Genius Sports' suite of data-driven PreMatch, LiveData and LiveTrading solutions while maintaining full flexibility and control over each element of its sportsbook. Powered by the highest quality data, Genius Sports will deliver real-time feeds and pin-point pricing for hundreds of competitions, including the EPL, NCAA Basketball, Euroleague Basketball and the NFL. Tipsport will have access to Genius Sports' full NFL product suite, including access to the league's real-time statistics, proprietary Next Gen Stats (NGS) and official sports betting data feed. Genius Sports will also deliver thousands of low latency streams through its rapidly expanding Streaming solution. Tipsport customers will benefit from an enhanced live betting experience through live streams of top tier football leagues across Argentina, Colombia, Iceland and China, as well as dozens of FIBA basketball and FIVB volleyball leagues globally. (See, PANDA_000176-PANDA_000177, https://geniussports.com/newsroom/genius-sports-builds-out-official-data-trading-and-live-streaming-partnership-with-tipsport/.)
[19C] at least one socket server communicatively coupled to the control server to: [19C.1] receive from the control server at least some of the first event information and at least some of the second event information wherein:	Genius Sports' streaming product includes <i>"at least one socket server communicatively coupled to the control server to receive from the control server at least some of the first event information and at least some of the second event information."</i> For example, Genius Sports' streaming product sends "a stream of messages over a long running socket" to accomplish the "API call to send real time data to the Warehouse/Statistics Engine." Introduction This API call is to send real time data to the Warehouse/Statistics Engine. It is accomplished by sending a stream of messages over a long running socket. Pending network problems the connection should remain open for the length of the match. Connection There are two different ways to establish a publish connection to the system a HTTP method or a RAW method. These two different ways exists to enable the client to potentially work around any port or proxy problems present at in venue areas. Connections can also be sent over one of two different ports, 80 or 5522 The same data, parameters and format is used in both methods, only the startup of the connection differs.

Key Features	Accused Product
	RAW In the RAW method, a socket is opened to the streaming API endpoint and the request string is sent, followed by two carriage returns (\n\n) or two carriage return line feeds (\r\n\r\n). To initiate RAW mode the nohttp parameter must be present and set in the request string. /v2/{sport}/publish Example - HTTP <pre>POST /v2/basketball/publish?streamKey=TESTSTREAMKEY&timestamp=1412987153 HTTP/1.1 Host: localhost:8000 Connection: keep-alive</pre> Example - RAW <pre>/v2/basketball/publish?nohttp=1&streamKey=TESTSTREAMKEY&timestamp=1412987153</pre> (See, PANDA_000139-PANDA_000141, https://developer.geniusports.com/warehouse/livestream/publish/index_football.html.) In addition, Genius Sports “relies on Ably to handle live sports and betting data delivery across 80 apps – each dedicated to a different sport” and Ably “can help [customers] easily build scalable and reliable apps with WebSockets.”

Key Features	Accused Product
	Infrastructure teams can “sleep easy” and developers are free to innovate Genius Sports now relies on Ably to handle live sports and betting data delivery across 80 apps – each dedicated to a different sport. Concerns about latency are gone - with 300+ points of presence across a global edge network, Ably effortlessly maintains sub-65ms latency at global scale. That ensures live data delivery to Genius Sports’ customers is always 3-4 seconds ahead of video, which protects the integrity of in-play betting and customer revenues. Meanwhile, Gary and his team can “sleep easier at night”, knowing that business critical data is no longer at the mercy of complex and increasingly unstable on-premises infrastructure; the daily rush to address hardware issues is a thing of the past. In turn, that has eliminated annual hardware costs and freed up around 30 hours per month in RabbitMQ maintenance that Genius Sports’ developers and engineers can now refocus on service optimisation and innovation.  Talk to our technical team Reach out to learn more about Ably and how we can help you easily build scalable and reliable apps with WebSockets. Live chat unavailable For all the ways to get in touch with us, visit our contact page. Try our APIs for free Our free plan includes: ✓ 6M Monthly messages ✓ 200 Peak concurrent channels ✓ 200 Peak concurrent connections ✓ No credit card required Start with a free account

	Communication between the Multibet widget and Genius Sport's back-end is accomplished using Genius Sport's SmartStream integration. SmartStream products are embedded within a webpage via an iframe. Multibet Widget Integration Our customers should embed the Multibet Widget through an iframe. When a player made his choice and requests a bet, the Multibet Widget will make a call to the customer's bet slip with all the required data to populate it with the selection details. The technical information for the front-end integration can be found in the following space - SmartStream Integrations. Customers that have already integrated with other Fan Engagement products such as betting widgets, Game Trackers, and Scoreboards can re-use the existing iframe implementation for the Multibet Widget. (See, PANDA_000065, https://geniussports.atlassian.net/wiki/spaces/BID/pages/4136337521/Multibet+Front-End+Integration.) This page describes how to integrate with the variety of SmartStream products with examples. All SmartStream products are hosted by Genius Sports and designed to be embedded within a client hosted webpage via an iframe. (See, PANDA_000077, https://geniussports.atlassian.net/wiki/spaces/BID/pages/56529015/SmartStream+Integrations.)

Key Features	Accused Product	
	SmartStream Release Process SmartStream is released to it's user acceptance testing (UAT) environment every two weeks with new features and bug fixes. Release notes will be published at the start of each cycle detailing what features and fixes are to be included in the release. After two weeks have passed with no critical issues, the version will be pushed to Production where it will be visible on your live site. It is at your discretion that you keep track of these release notes to ensure you are still successfully integrating and that you are satisfied with the new and upcoming version of SmartStream. A separate UAT SmartStream URL will be included as part of your integration details for you to use. It is highly recommended that you maintain a replica environment of your own site with the UAT version of SmartStream integrated to enable you to review up-and-coming features and fixes before they reach Production.  <pre> graph LR Dev[Development] -- "Two weeks" --> UAT[UAT] UAT -- "Two weeks" --> Prod[Production] </pre>	Embedding a product To display the HTML SmartStream product on your page you will first need to add the following scripts into the body of the page, preferably at the bottom to ensure that the SmartStream application is loaded after the elements of the page itself. The demo URLs should be replaced with your customer specific URLs, which will be provided by Genius Sports once a client specific version of the application has been generated. <pre> <script src="https://bsdemo.betstream.betgenius.com/betstream" <script> var iframeApi = new IFrameApi("betgenius-iframe"); </script> </pre> The iframe code below should be placed within the body of the webpage where you would like the HTML SmartStream product application to appear. The script below is an example that embeds a Football Scorecentre product and should be replaced with the location of your client specific product which will be provided by Genius Sports. The id of the iframe should match the parameter passed in the JavaScript object above. <pre> <iframe scrolling="no" id="betgenius-iframe" src="https://bsc </pre>
	(See, PANDA_000077-PANDA_000078, https://geniussports.atlassian.net/wiki/spaces/BID/pages/56529015/SmartStream+Integrations.) Genius Sports offers several data-related product offerings to provide sportsbooks various data streams (betting data, sports data). In one example, Genius Sports' streaming product uses Multibet, which allows end users (e.g., bettors) to place same-game parlays during a sports match. Multibet is specifically offered to sportsbooks for integration into their trading platform. As shown in the screenshots below, Genius Sports transmits the soccer game score, total goals over/under, total corners, first goal scorer, player cards, etc.	

Key Features	Accused Product

Key Features	Accused Product
	 (See, PANDA_000015, https://investors.geniussports.com/news/news-details/2019/Betgenius-launches-live-streaming-service-for-sportsbooks/default.aspx.) Genius Sports’ streaming product combines live sports data and live sports video (i.e., “<i>the second copy</i>”), which is the exact focus of the claimed invention. As stated below, Genius Sports’ streaming product pairs “video, captured direct from pitch or courtside ... with official data and live betting services...”:

Key Features	Accused Product
	<i>New content is complemented by complete official data offering and will plug crucial gaps in in-play betting schedules – bet365 among the first to go live with the product.</i> Betgenius, a leading supplier of data and trading services to sportsbooks, has launched a live streaming service giving operators access to new content from sport competitions around the world. Derived from partnerships with official rights holder across multiple sports, the service features thousands of low latency streams including content which has never before been available to sportsbooks. By focusing on fixtures played at off-peak times, the service allows operators to offer a more engaging experience right around the clock, enhancing bet placement and customer retention during quiet scheduling periods. <i>All video, captured direct from pitch or courtside, is paired with official data and live betting services, and features easy-access API integration.</i> International operator bet365 is among the first sportsbooks to go live with the product, with more to be announced in the coming weeks. Jack Davison, Chief Commercial Officer at Genius Sports Group, said: "Our close relationships with sports rights holders across the world have given us access to new, high quality streaming content which will significantly enhance our sportsbook partners' in-play products. "Combined with fast, accurate data on thousands of fixtures, this is a new and cost-effective way to attract more customers with a complete and immersive live betting experience." (See, PANDA_000015-PANDA_000016, https://investors.geniussports.com/news/news-details/2019/Betgenius-launches-live-streaming-service-for-sportsbooks/default.aspx.) Genius Sports offers two options for sportsbooks to receive their live video stream offerings: (1) a Drop & Play video player developed in-house by Genius Sports that can be embedded in a sportsbook's webpage, and (2) a video API that can facilitate access to Genius Sport's live streams using a sportsbook's own video player. Both options result in a copy of a video stream being provided to a viewer client device, as claimed. Authentication data (e.g., a URL, token, DRM) is transmitted to the client device and is passed to a video player on the client device (e.g., the video player embedded in a sportsbook's website). The video player then requests and receives a copy of the video stream from an appropriate CDN using the authentication data. <u>Option (1): Drop & Play</u> For this option, Genius Sports provides a video player widget that can be integrated by a sportsbook into their website. When a user/viewer requests a video stream while using the sportsbook's website, the back-end of the sportsbook's website transmits a query to Genius Sport's video API to retrieve authentication data related to the selected video stream. When the sportsbook's website retrieves this

Key Features	Accused Product
	information, the authentication data is passed along to the video player, which in turn transmits a request from a CDN to retrieve the video stream. In this manner, a copy of the video stream is provided to the video player on the viewer client device via a communication channel between the CDN and the client device. This process is depicted below. Insert a script tag defining the desired fixture and the bookmaker source: <pre> 1 <script 2 src="https://genius-live-player-production.betstream.betgenius.com/widgetLoader? customerId=YOUR_CUSTOMER_ID&fixtureId=YOUR_FIXTURE_ID"> 3 </script> </pre> Insert an element with defined id to attach the video player to it, should be the exact same one used as the script containerId parameter <pre> 1 <div id="YOUR_CONTAINER_ID" /> <!-- Defaults to geniusLive if a containerId is not set --> </pre> Add an event listener in your website to listen to the player ready event and when this triggers call our API to retrieve the stream-url and token and hand this response back to our player. Everything else is taken care of How does it work? You embed a script tag in your site with the querystring parameters you are interested in passing to the player. Our player looks at the stream types available for the specific fixture you are trying to display and picks the most appropriate stream for your viewers device. Our script will then raise an event out to the containing window, with the necessary information to make a call to our API from your backend. <i>Our API should never be called from the browser directly.</i> The call to our backend, which is per fixture viewer session, retrieves a url, a token and any DRM information which you may need to play the fixture. You hand the response straight back to our player and it will play the fixture. Sensible HTTP error codes will be returned from our API around the status of the fixture and whether you have booked it.

Key Features	Accused Product
	The diagram illustrates the Video API integration process. It involves the following components and steps: Viewer (User) interacts with the Customer site (viewer client device). Customer site sends a "Get player javascript tag with a parameterised get" to the Player (The video player on the customer website requests and receives the video stream based on the URL, token, and/or DRM). Player sends "what renditions are available, what device is this?" to the Customer Backend. Customer Backend sends "get url with token, drm info for the future" and "returns token, drm info for the future" to the Video API. Video API sends "Get available renditions for that future" to the Player Backend. Player Backend sends "List of renditions" to the Video API. Video API sends "send back (submit) to" to the Customer site, which includes all the renditions. The site renders the player, js is started, understanding is pulled from renditions. Player sends "Player makes an auth request to site, says what rendition it wants, also passes along allowed or not in case site cares." and "makes auth request to that rendition type" to the Customer site. Customer site sends "pass credentials back" and "credentials to player" to the Player. Player sends "Get video" to the CDN (Media source). CDN sends the video stream to the Player. CDN also sends "CDN token authentication" to the Player Backend. Player Backend sends "alt (requires matching)" to the CDN, which includes "switch from customer to genius future id".
	(See, PANDA_000541, PANDA_000550, https://dap-docs.betstream.betgenius.com/how-to-integrate.) <u>Option (2): Video API</u> For this option, the back-end of the sportsbook's website first requests and retrieve authentication data (e.g., a URL, a token, and/or DRM) related to the selected video stream and then passes this information along to a video player to request and retrieve the video stream. The sportsbook provides their own video player, which is configured to use CDN token authentication. A copy of the video stream is provided to the sportsbook's own video player on the client device via a communication channel between the CDN and the client device. This process is depicted below.

Key Features	Accused Product
	GL-Video-v3 3.0.13 [Base URL: api.geniussports.com/V1deo-v3/PROSTD] https://explorer.api.geniussports.com/V1deo-v3/PROSTD/swagger-latest.json Video Streaming API The video streaming API is used by customers to: - Retrieve the schedule of upcoming streams. - Retrieve the streaming parameters for a particular fixture. - Retrieve the full list of possible regions for playback. This API does not deliver the video stream itself, it only tells what are the specific parameters for streaming a given fixture. It is up to the users of this API to configure a video player with the streaming parameters. This API must never be called from the browser/client side. Instead, the API should be integrated into your server-side systems. This avoids exposing authentication credentials and manage the load on Geniuslive systems. Player integration You will need to add the necessary logic in your web site to call your backend to retrieve the schedule and the streaming parameters described before. Also, you will need to integrate a player in your site that can apply CDN token authentication. For specific competitions your player will also have to decrypt content using DRM. Playing the content Once you have retrieved the schedule and you have selected a fixture to watch, your site should do the following per viewer: 1. Geo-locate the viewer to know the region where the playback is requested 2. Validate if the viewer meets at least one of the permissions required by the selected live stream 3. Select the appropriate delivery to play from the selected live stream. You might need to check the client's platform to choose between HLS or DASH deliveries. 4. Call your backend to get the streaming parameters from the Video API. 5. Play the content using CDN token authentication (and DRM for specific competitions)

[20B.1] transmits at least the first score information of the first event information to the second viewer client device of the first plurality of viewer client devices via a third event information Internet communication channel between the at least one first event socket of the at least one socket server and the second viewer client device of the first plurality of viewer devices; and	On information and belief, Genius Sports’ streaming product includes at least one socket server that <i>“transmits at least the first score information of the first event information to the second viewer client device of the first plurality of viewer client devices via a third event information Internet communication channel between the at least one first event socket of the at least one socket server and the second viewer client device of the first plurality of viewer devices.”</i> <i>See</i> discussion of Claim Element [19C.2], <i>supra</i>. For example, the Genius Sports platform supports multiple users viewing the same sporting event simultaneously, such that a second viewer client device of the first plurality of viewer client devices will be provided a second copy of the first plurality of copies. As described below, Genius Sports delivers “thousands of low latency live streams” from top tier football leagues across Argentina, Colombia, Iceland and China, as well as dozens of FIBA basketball and FIVB volleyball leagues globally. Genius Sports Limited (“Genius Sports”), the official data, technology and broadcast partner that powers the ecosystem connecting sports, betting and media, has agreed to a major expansion of its long-term partnership with Tipsport, a leading Czech sportsbook operator across retail and online. Tipsport has agreed to a substantial uplift in the number of annual events covered by Genius Sports’ suite of data-driven PreMatch, LiveData and LiveTrading solutions while maintaining full flexibility and control over each element of its sportsbook. Powered by the highest quality data, Genius Sports will deliver real-time feeds and pin-point pricing for hundreds of competitions, including the EPL, NCAA Basketball, Euroleague Basketball and the NFL. Tipsport will have access to Genius Sports’ full NFL product suite, including access to the league’s real-time statistics, proprietary Next Gen Stats (NGS) and official sports betting data feed. Genius Sports will also deliver thousands of low latency streams through its rapidly expanding Streaming solution. Tipsport customers will benefit from an enhanced live betting experience through live streams of top tier football leagues across Argentina, Colombia, Iceland and China, as well as dozens of FIBA basketball and FIVB volleyball leagues globally.

	(See, PANDA_000176-PANDA_000177, https://geniussports.com/newsroom/genius-sports-builds-out-official-data-trading-and-live-streaming-partnership-with-tipsport/.) Genius Sports offers a Multibet widget, which can be integrated into the front-end of the sportsbook's platform. An end user using the sportsbook's platform can request a bet via the widget and the widget can thereafter retrieve the data needed to populate the end user's betslip. This data includes, for example, the bet generated by the sportsbook's trading platform, which is transmitted by Genius Sports back-end (e.g., their Pricing Engine) to the Multibet widget. Although the bets are generated dynamically by the sportsbook's platform, the bets are always stored by Genius Sports for re-use. In this document, you'll find a brief description of the new Multibet widget front-end structure. The multibet widget product is designed to allow bettors to place several bets related to a fixture in pre-match or in-play. Initially, American football and football (soccer) are supported, although the widget is intended to be sport agnostic, small tasks are required to support new sports. It is intended for bookmakers to implement on their websites offering their users a range of configurable markets per event according to their needs. The Widget allows different customizations such as colors and fonts, which will allow our customers to use their brand properties offering their end users a seamless experience on their site. (See, PANDA_000065, https://geniussports.atlassian.net/wiki/spaces/BID/pages/4136337521/Multibet+Front-End+Integration.) Please note that latest platform response for each unique Multibet market will be stored on Genius Sports' system in order to be re-used for subsequent bets. (See, PANDA_000533 at PANDA_000535, https://geniussports.atlassian.net/wiki/spaces/BID/pages/4283664043/Multibet+Sportsbook+Integration+V3#Sportsbook-Trading-Platform-Response-to-Multibet-Market-Messages.)

	 (See, PANDA_000001, https://geniussports.atlassian.net/wiki/spaces/BID/pages/4284776797/Authenticating+User-Session+Using+a+Proxy+Service.) Communication between the Multibet widget and Genius Sport's back-end is accomplished using Genius Sport's SmartStream integration. SmartStream products are embedded within a webpage via an iframe.

Key Features	Accused Product
	Multibet Widget Integration Our customers should embed the Multibet Widget through an iframe. When a player made his choice and requests a bet, the Multibet Widget will make a call to the customer's bet slip with all the required data to populate it with the selection details. The technical information for the front-end integration can be found in the following space - SmartStream Integrations. Customers that have already integrated with other Fan Engagement products such as betting widgets, Game Trackers, and Scoreboards can re-use the existing iframe implementation for the Multibet Widget. (See, PANDA_000065, https://geniussports.atlassian.net/wiki/spaces/BID/pages/4136337521/Multibet+Front-End+Integration.) This page describes how to integrate with the variety of SmartStream products with examples. All SmartStream products are hosted by Genius Sports and designed to be embedded within a client hosted webpage via an iframe. (See, PANDA_000077, https://geniussports.atlassian.net/wiki/spaces/BID/pages/56529015/SmartStream+Integrations.)

Key Features	Accused Product
	SmartStream Release Process SmartStream is released to its user acceptance testing (UAT) environment every two weeks with new features and bug fixes. Release notes will be published at the start of each cycle detailing what features and fixes are to be included in the release. After two weeks have passed with no critical issues, the version will be pushed to Production where it will be visible on your live site. It is at your discretion that you keep track of these release notes to ensure you are still successfully integrating and that you are satisfied with the new and upcoming version of SmartStream. A separate UAT SmartStream URL will be included as part of your integration details for you to use. It is highly recommended that you maintain a replica environment of your own site with the UAT version of SmartStream integrated to enable you to review up-and-coming features and fixes before they reach Production.  <pre> graph LR Development[Development] -- Two weeks --> UAT[UAT] UAT -- Two weeks --> Production[Production] </pre> Embedding a product To display the HTML SmartStream product on your page you will first need to add the following scripts into the body of the page, preferably at the bottom to ensure that the SmartStream application is loaded after the elements of the page itself. The demo URLs should be replaced with your customer specific URLs, which will be provided by Genius Sports once a client specific version of the application has been generated. <pre> <script src="https://bsdemo.betstream.betgenius.com/betstream" <script> var iframeApi = new IFrameApi("betgenius-iframe"); </script> </pre> The iframe code below should be placed within the body of the webpage where you would like the HTML SmartStream product application to appear. The script below is an example that embeds a Football Scorecentre product and should be replaced with the location of your client specific product which will be provided by Genius Sports. The id of the iframe should match the parameter passed in the JavaScript object above. <pre> <iframe scrolling="no" id="betgenius-iframe" src="https://bsc </pre> (See, PANDA_000077-PANDA_000078, https://geniussports.atlassian.net/wiki/spaces/BID/pages/56529015/SmartStream+Integrations.) Genius Sports offers several data-related product offerings to provide sportsbooks various data streams (betting data, sports data). In one example, Genius Sports' streaming product uses Multibet, which allows end users (e.g., bettors) to place same-game parlays during a sports match. Multibet is specifically offered to sportsbooks for integration into their trading platform. As shown in the screenshots below, Genius Sports transmits at least the soccer game score, total goals over/under, total corners, first goal scorer, player cards, etc.

Key Features	Accused Product
	More in-play profits In-Play MultiBet is a high-margin live betbuilder product, where revenues mount as users add selections to their betslips. Players create the exact accumulator they want, during a single game, for example - Ronaldo to score, Portugal to win, Over 5.5 Corners, Penalty awarded to Portugal.  The screenshot displays the MultiBet interface for a live match between Brazil (Score 2-1, 51:24) and Switzerland. The interface includes tabs for Score, Stats, MultiBet, Main, and Handicaps. Under the MultiBet tab, there is a section titled 'My Selections' with a dropdown arrow. Below this, a list of selections is shown: Match Result - Brazil, Total Goals Over/Under - Brazil O 2.5, First Goal Scorer - Neymar, Total Corners - O 9.5, and Player Cards - G. Xhaka. A dark blue button labeled 'Add to betslip' is at the bottom of the list. The total odds for the selections are 51.00. (See, PANDA_000111 at PANDA_000112-PANDA_000113, https://geniussports.com/sportsbook/betting-data-odds/in-play-multibet/.)

Key Features	Accused Product
	• Genius Sports to provide sportsbooks with automated, AI-powered live odds enabling bettors to place same-game parlays during live play or game intervals • The new product will be available for the FIFA World Cup, NFL, English Premier League and thousands of other official Genius events Genius Sports Limited ("Genius Sports"), the official data, technology and broadcast partner that powers the ecosystem connecting sports, betting and media, has launched <i>In-Play MultiBet</i>, providing sportsbooks with a powerful new tool to engage players and grow revenues in time for the FIFA World Cup 2022 and ongoing NFL season. Same-game parlay bets, which enable bettors to wager on multiple events occurring within the same game, have become an essential part of every major sportsbook's offering, giving customer's greater control over their bets and enhanced margins for the operators themselves. Now, through <i>In-Play MultiBet</i>, these bespoke bets can be placed once the game has begun, enabling players to place bets after every goal, touchdown and during intervals. Launched in time to give sportsbooks a new dimension at the FIFA World Cup, <i>In-Play MultiBet</i> is powered by the highest quality AI-powered live odds, tried and tested on Genius Sports' leading LiveTrading service. <i>InPlay MultiBet</i> will also be available across the NFL, English Premier League, Liga MX, and dozens of FIBA basketball and FIVB volleyball leagues worldwide. "Combining same game parlays with the unstoppable growth of in-play betting is a breakthrough innovation for us and our partners," said Jack Davison, Chief Commercial Officer of Genius Sports. "Starting with the biggest sports event of the year, the FIFA World Cup, <i>InPlay MultiBet</i> will enable our partners to unlock bigger margins and drive engagement between key match events and breaks." (See, PANDA_000179-PANDA_000180, https://www.geniussports.com/newsroom/genius-sports-launches-in-play-multibet-for-the-next-generation-of-same-game-parlay-bets/.) Genius Sports offers several options to sportsbooks to integrate MultiBet into their trading platform. In one example, Genius Sports provides a Multibet API, Sportsbook Integration (V3), and a UI widget to facilitate both front-end and back-end integration.

Key Features	Accused Product
	During operation, Genius Sport's Integration Service (provided by Sportsbook Integration (V3)) transmits various data (fixtures, markets, prices, results) to the sportsbook's trading platform via an Internet connection. Additionally, the Integration Service transmits a message to create a market (bet) in the sportsbook's trading platform. In return, the generated bet is transmitted from the trading platform to the Integration Service. In this manner, the sportsbook and Genius Sports services retrieve information germane to the first live sporting event via the Internet.  (See, PANDA_00212 at PANDA_00213, https://geniussports.atlassian.net/wiki/spaces/BID/pages/4283664027/Multibet+Back-End+Integration.)
