'968 Claim 1	Exemplary Amazon Infringement
1[PRE]: A receiving apparatus configured to receive digital moving image contents from a provider of the digital moving image contents, the provider being commutatively connected to the receiving apparatus, the receiving apparatus comprising:	Amazon's Fire TV, Fire Stick (used with a display), and Fire tablets ("Amazon Accused Products") are receiving apparatuses configured to receive digital moving image contents from a provider of the digital moving image contents, the provider being commutatively connected to the receiving apparatus. For example, Amazon Fire TV, Fire Stick, and Amazon Fire tablets are receiving apparatuses configured to receive digital moving image contents via the Prime Video app from a provider of the digital moving image contents (i.e., Amazon's servers), the provider being commutatively connected to the receiving apparatus. In addition, Amazon induces infringement by customers who use Prime Video to stream content on non-Amazon TVs, tablets, and other mobile devices in the same manner as the Amazon Accused Products described here. Amazon also induces infringement by customer who use the Fire Stick with Prime Video to stream content on an attached display. For the same reasons discussed below, Amazon also contributorily infringes this claim by providing within the United States the Prime Video app, which includes functionality that automatically plays the next episode in a series.

Meet the Fire TV family

The advertisement is divided into two main sections. The left section, titled 'Streaming media devices', features images of the Fire TV Stick, Fire TV Stick 4K, Fire TV Stick 4K Max, and Fire TV Cube, along with their respective remote controls. The right section, titled 'Smart TVs', shows a large television displaying the Fire TV interface with various app icons and content recommendations. Both sections include a 'Shop now' button.

Streaming media devices

Get the Fire TV experience on your existing TV, or take it with you—just plug into an HDMI port to enjoy your favorite content.

Shop now

Smart TVs

A smart TV with all of your entertainment options built in—movies, music, live TV, apps, and more.

[1A]: a processor executing instructions to designate a part of the digital moving image contents in the provider automatically or in response to a manual operation;

The Amazon Accused Products comprise a processor executing instructions to designate a part of the digital moving image contents in the provider automatically or in response to a manual operation.

For example, when a user selects an episode from a TV series in the Prime Video app, the Amazon Accused Products include hardware and software that designates a part (e.g., an episode) of the digital moving image contents (e.g., a TV series or a single episode).

[1B]: a memory that keeps information necessary for the processor to automatically designate a succeeding part of the digital moving image contents to a viewed part of the digital moving image contents;	The Amazon Accused Products include a memory that keeps information necessary for the processor to automatically designate a succeeding part of the digital moving image contents to a viewed part of the digital moving image contents. For example, when a user reaches the end of an episode in a TV series, the Amazon Accused Products, via Prime Video, automatically designate the next episode for playback. The information necessary for the processor to do this action is in memory.  Prime Video autoplays the next episode in a TV series See also https://amazonforum.my.site.com/s/question/0D54P00007NPJLpSAP
[1C]: a designation software controller configured to control the memory to keep the information in response to a termination of viewing the viewed part and control the processor to automatically designate the succeeding	The Amazon Accused Products include a designation software controller configured to control the memory to keep the information in response to a termination of viewing the viewed part and control the processor to automatically designate the succeeding part of the digital moving image contents when the viewing starts again.
