Subject: Work Around

Hi there,

how are you? Hope all well so far ;) We have discussed work arounds and solutions for the discussed issues. One problem is that we can not spend too much time on studio corrections and will be later as we need them. Therefore we have a good work around...

Issues addressed:

1. cannot find created icharts because of the "previous", "next" navigation
2. cannot use find
3. icharts are sorted arbitrary
4. no grouped selection of objects possible
5. existing icharts are shifted to the left and have to be adjusted manually

Additional consideration: all charts we are producing will land in the icharts portal and shall give the impression that the content comes from various sources. Therefore it is good if not all charts are coming from the same account. The account name will be part of the info about the chart.

Solution's:

1. cannot find created icharts because of the "previous", "next" navigation --> we will create new accounts for all new main topics so that not more than about 40 max icharts per account will be created. This keeps it easy to find the charts and it fulfills also the "Additional Consideration"
2. cannot use find function to find existing icharts --> same as above
3. icharts are sorted arbitrary --> above action will also mitigate this issue and it will not be resolved anymore in the studio but in the portal. See also 5.
4. no grouped selection of objects possible --> resolving this is a bigger thing. Therefore this also can only be done for portal as well
5. existing icharts are shifted to the left and have to be adjusted manually --> this we have requested to fix asap by coding, so that manual correction not needed. Please don't do anything until this is clarified with development.

Will try to call you both around 9pm today for a short synch and some comments about the above ;)

Take care
Hans-Bernd
