Subject: Re: test of stage after merge

Hallo Hans-Bernd,

ad 1) Tyron hat ein Ticket aufgesetzt, um dieses zu adressieren, Slider darf sich nur auf sichtbare Daten beziehen

ad 2)

- Weise Boxen Problem - Swati kümmert sich drum, bitte dort nachhaken
- Verschobene Charthintergründe:

Das Urproblem lag daran, dass die Chart Area sich an das jeweilige Browser-Fenster angepasst hat. D.h. hat Dipesh ein Chart erstellt, hat er das in einer bestimmten Fenstergröße gemacht. Hast Du es mit einer anderen Fenstergröße aufgemacht, verschiebt sich die Chart Area im Verhältniss zu den anderen Chart Objekten (kannst Du im Pilot nachvollziehen, mach ein neues Chart auf, dann verändere die Fenstergröße, macht Spass anzuschauen). Hast Du dann das Chart gespeichert, wird dieses mit der verschobenen Chart Area gespeichert. Sprich das Problem ist nicht bei allen Charts, sondern nur bei denen die Du aufgemacht hast und wieder geschlossen hast. Kann leider nicht von der Truppe behoben werden, sondern ihr müsst durch alle Charts durch und diese nochmal anpassen. Sorry.

Grüße,
Seymour

Dear All,

Current test of stage

1. Seymour also responded on this. If the top 10 / bottom 10 function is removed we get rid of the biggest part of the issue. One question remains however which is a design topic.

If I have hidden say 8 from 10 data points, how shall the behaviour of the slider be defined then? The current situation is like this:

The slider has 10 positions and at all of them the hidden data x value is shown in a small popup when touching it. Is that what we want or shall the slider in that case only act on the two data points which remain.

The advantage of the current situation is that a reader not knowing the chart gets some hints that there are more data points otherwise it is not so obvious what the hell the slider is doing and can be misunderstood as a male function.

2. we have line charts from the data base of pilot which are still not fitting on the on the chart area. They were misplaced strongly on pilot and now they are misplaced much less but still. They are overall too big for the area. Example: "Population of USA - Female".

When previewing the chart it also does not fit (left side y axis numbers cut off) and there are white spots as if invisible comment boxes were cutting stuff out.

Consequence: I have to go on with testing today evening and have to show you some of these topics. Maybe I make a recording.

Rgds
Hans-Bernd

Best regards
Hans-Bernd

Hi Seymour,
ja, das löst das Problem vollständig. Fliegt das noch vor dem Launch raus?

Grüße
Hans-Bernd

Hallo Hans-Bernd,

nur zur Info - wir werden die Top 10 / Bottom 10 Funktionalität in Kürze rausnehmen, da wie sie jetzt aufgesetzt ist, keinen Sinn macht. Weiss nicht, ob das Dein Problem beantwortet.

Gruss,
Seymour

Hi Girish,

I have tested the stage and I have to have a call with Girish asap. Wil most probably call around 11 IST. The question is about the interactive functionality of a chart where in the first version most of the data points are hidden. Is it expected to see the top 10 and bottom 10 buttons there or not? The reason I'm asking is that there is a very different behaviour between already existing icharts and new created which are otherwise completely the same.

Girish, can you please send me a phone number to call you. I will call you from my bb while driving. Thanks so much !

Rgds and talk to you tomorrow
Hans-Bernd
