Subject: Re: Proposal for development of iCharts Phase 1

Hi Girish,

we reviewed your proposal and have a couple of questions we would like to review with you. Tyron and I would like to have a call with you on Friday, 1100h, if possible.

The points we would like to review are as follows:

1. Technology

While you mention the Flex Framework, we are lacking a mentioning that the output charts will be generated in Flash. We regard Flash as the core technology required to make the service successful in terms of interactivity features, rendering quality and the capability to easily embed anywhere. Hence, we would like to see this explicitly stated.

2. UI Design

You mention that you assume you will be provided with UI elements (HTML, CSS, images) along with the UI Design itself. Generally we prefer a model where we provide the UI design with graphical elements and all programming is done from one hand, including integration to the UI. However, we would like to understand your reasoning for proposing the separation.

3. Interactive chart features

As interactivity of charts is a core capability of our service, we would like to see one such (small) effect built into the first set of charts produced, e.g. a mouse-over effect revealing next level data point(s).

4. Chart searching capability

Another key feature of the service is the capability that the meta-data of the charts (e.g. X-, Y-Axis, Legends, Title etc.) are made searchable via tags. Hence, the charts should have already this feature built in "under the hood".

These points as heads up for our conversation on Friday.

Please confirm that the time is suitable for you. As Tyron is in a remote spot currently, I will set up a conf call via standard phone and provide a number for the call.

Best,
Seymour

Hello Girish,

thank you for the proposal, which looks good. I see that you have done your deep dive to investigate how deep the iceberg is.... :)

Tyron and I are currently reviewing the document and we will get back shortly to you for a Q&A session.

Best,
Seymour

Hello Seymour,

Hope you are doing well.

As discussed, please find attached the proposal for development of phase 1 of iCharts.

In the proposal, we have detailed the scope of work in the form of high level use cases that we will be developing.

Sorry for delay in sending the proposal. This was mainly due to time taken for understanding the details of the requirements and fitment of technology to develop the same.

I propose that we have a skype/ telephonic call where I can take you through the proposal and answer any questions that you might have with respect to the same.

Do let me know appropriate time when we can have the call.

Regards,

Girish Karachiwala
