☑ As luck would have it, I was talking to one of my other long-time coworkers and they did have them, so posting both the Client and Server manuals for you.

Regards,
Brett

@sasikumar

Wow! you are still using 8.5. I probably last used that in 2010. I will check my old mails if I have a pdf manual. However, Qlik partners/Qlik themselves are the best places to find this. If you are working for an organization, you can contact your qlik partner.

However, it could be really interesting to know why somebody would use qlikview 8.5 which is very naive in capability of reporting and analysis especially compared to today's

versions.

I believe the other major issue is going to be lack of support for any current operating systems, I agree with @tresesco in regard to the need to upgrade to a newer/supported version, as I would expect issues with 8.5 at this point given the version of .Net that was used with it etc. I am not aware of any documentation either, I used to have them, but I cleared things out a few years ago. If you have specific questions I may be able to answer them as I was around during 8.5, but it has been a while for sure.

Regards,
Brett

In response to **tresesco**

haha, we are Supporting lot Qlik Customers, so every client mostly have different version. i think one of our client still using qlik 7 versions also.
