The **7000 Series** Precision Air Cart is simple to operate and incorporates Morris' unique metering system, convenient electronic monitoring, and the option of single, double or triple shoot set-ups. Our "walk-through" tank system is ergonomically designed for operator comfort and safety.

Available in 130 to 300 bushel models, the Morris **7000 Series** Precision Air Cart incorporates a unique air distribution system and patented "flat fan divider head." Choose from tow-behind and tow-between configurations to meet your operational requirements.

"The Morris 7000 Series Air Cart is very easy to work with - set to the chart and it's bang on, from wheat to canola to lentils to peas."

Testimonials

Product Features :

Third Tank
Optional third tank (standard on the 7252 model) makes triple shooting possible. This configuration facilitates a one-pass operation, reducing time spent applying granular herbicide, and eliminating unnecessary handling of product.

Delivery System
The unique design of our delivery system provides a horizontal flow of material, eliminating abrupt directional changes and reducing seed damage. The patented flat fan divider head delivers product evenly to each secondary hose for uniform emergence.

Metering Wheel
Unique, spiral-fluted metering wheels gently roll product into air stream in a constant flow. Morris' metering wheels are matched with individual divider heads to ensure accuracy and efficiency in seeding the full range of seed varieties from canola to beans and legumes.

High Flow Fan
High flow fan gives added product carrying capacity. The piston hydraulic motor is 96% efficient and rated for 10,000 hours of service. This set-up is less taxing on the tractor's hydraulic system.

Monitoring
The easy to read monitor provides accurate data such as ground speed, fan speed, bin level, field acres seeded, total acres seeded and much more.

Variable Rate System
Optional variable rate system allows you to change rates on the go with the simple press of a button.

Walk-Through
Unique "walk-through" design with non-slip surface gives access to the loading areas without bending or negotiating tank tops. Access to the platform is available from both sides of the tank (when auger is down).

Sight Glasses
Sight glasses are visible from the ground, allowing you to fill tanks to capacity without climbing up and down to check levels.

Double Hinge Auger
The 7000 series auger is double-hinged for exceptional balance. The 7" auger is standard and an optional 8" auger is available on the 7240 and 7300 models.
