

AFFIDAVIT OF NATHANIEL E FRANK-WHITE

1. I am a Records Request Processor at the Internet Archive. I make this declaration of my own personal knowledge.

2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.

3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to browse more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a display of available dates. The visitor may select one of those dates, and begin browsing an archived version of the Web. Links on archived files in the Wayback Machine point to other archived files (whether HTML pages or other file types), if any are found for the URL indicated by a given link. For instance, the Wayback Machine is designed such that when a visitor clicks on a hyperlink on an archived page that points to another URL, the visitor will be served the archived file found for the hyperlink's URL with the closest available date to the initial file containing the hyperlink.

4. The archived data made viewable and browsable by the Wayback Machine is obtained by use of web archiving software that automatically stores copies of files available via the Internet, each file preserved as it existed at a particular point in time.

5. The Internet Archive assigns a URL on its site to the archived files in the format http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL] aka an "extended URL". Thus, the extended URL http://web.archive.org/web/19970126045828/http://www.archive.org/ would be the URL for the record of the Internet Archive home page HTML file (http://www.archive.org/) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). The date indicated by an extended URL applies to a preserved instance of a file for a given URL, but not necessarily to any other files linked therein. Thus, in the case of a page constituted by a primary HTML file and other separate files (e.g., files with images, audio, multimedia, design elements, or other embedded content) linked within that primary HTML file, the primary HTML file and the other files will each have their own respective extended URLs and may not have been archived on the same dates.

6. Attached hereto as Exhibit A are true and accurate copies of browser screenshots of the Internet Archive's records of the archived files for the URLs and the dates specified in the attached coversheet of each printout.

The 2014 GoPro's In-Depth Review: Hero4 Black, Hero4 Silver, GoPro Hero

NOVEMBER 13, 2014 by DC RAINMAKER | ACTION CAMS » GOPRO » PRODUCT REVIEWS | COMMENTS (61)

Early last month GoPro completed their annual October ritual of releasing a suite of new units. Like past years, GoPro doesn't tend to make massive upgrades in their units, but rather works to add incremental features and performance bumps. The thing is: These incremental bumps serve to stay just ahead of most of the competitors out there.

But with these incremental bumps also came a rather unusual bump in price at the top end, while inversely dropping the lower-end unit significantly in price. The question is, did this strategy work this time, and are they competitive in the market?

Over the last month I've beat the crap out of the cameras, which I bought myself, to find out. From testing out the different new high resolution and high speed video modes to understanding the impact on battery life, I dive into it all. Let's get started!

UNBOXING OVERVIEW:

I'M DC RAINMAKER...

I swim, bike and run. Then, I come here and write about my adventures. It's as simple as that. Most of the time. If you're new around these parts, here's the long version of my story.

SUPPORT THIS SITE

Wanna help support the site? You have two options. The first is to use Clever Training with either the coupon code (DCR10JKW) or the VIP program. Both save 10%, see details by clicking below:

Alternatively, for everything else on the planet, simply buy your goods from Amazon via the link below and I get a tiny bit back. No cost to you, easy as pie!

It's somewhat rare that I group this many products into a single review. Sometimes I'll do two minor variations of the same product in a single post, but I think this is the first threesome I've had around these parts. When it comes to the GoPro packaging though, all three units are pretty similar actually.

They all include the following:

- The camera itself (duh)
– The battery for the camera
– A mini-USB cable
– An underwater case rated to 40m/131ft
– An alternate/secondary door for the case that allows for better audio
– A small stack of GoPro stickers
– A small quick-start guide and other paper junk
– A flat adhesive mount
– A curved adhesive mount
– A loss prevention rubber stopper

In addition, the Hero4 Black and Silver also include a little adapter arm for the mounting system to change the direction a bit. Of course, because everyone wants to see exactly what comes in each package, I've included the unboxing for each of them below. I've abbreviated it a little bit though on the Silver/Base just to keep things non-redundant. Sound good? Let's tear apart some boxes…

UNBOXED – HERO4 BLACK:

To begin you'll find the boxes of the Black and Silver fairly similarly designed, with only the Base Hero slightly different with cheaper packaging materials to save weight and cost.

Here's what you'll get inside the Hero4 Black box. It's all the items noted above, but one little piece that many people accidentally miss – which is the flat black baseplate that the Hero comes on. It can in effect act as a handy little tripod, yet many folks simply throw it away.

FAQ'S

I have built an extensive list of my most frequently asked questions. Below are the most popular.

- Why haven't you yet released a review for XYZ product you mentioned months ago?
- Will you test our product before release?
- Are you willing to review or test beta products?
- Which trainer should I buy?
- Which GPS watch should I buy?
- I'm headed to Paris – what do you recommend for training or sightseeing?
- I'm headed to Washington DC – what do you recommend for training?
- I'm from out of the country and will be visiting the US, what's the best triathlon shop in city XYZ?
- What kind of camera do you use?
- What are your least favorite countries/places?

5 EASY STEPS TO THE SITE

Looking at all the components individually, first we got the paper stuffs and GoPro stickers:

Next, the standard mini-USB plug that can be used to both charge the unit as well as download photos. Note that this USB cable (and your attached GoPro) can be plugged into any USB outlet on the planet.

Then we have the new battery design of the Hero4 Black and Silver. It's a bit thinner than the past batteries which were chunkier.

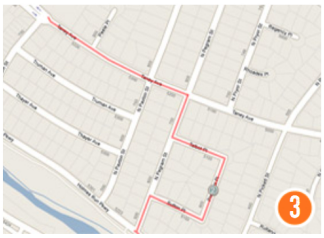

In Depth Product Reviews

You probably stumbled upon here looking for a review of a sports gadget. If you're trying to decide which unit to buy – check out my in-depth reviews section. Some reviews are over 60 pages long when printed out, with hundreds of photos! I aim to leave no stone unturned.

Read My GPS Recommendations.

Here's my most recent gadget recommendations guide (Summer 2014 edition) – covering almost every category of sports gadgets out there. Looking for the equipment I use day to day? I also just put together my complete 2013 'Gear I Use' equipment list, from swim to bike to run and everything in between (plus a few extra things). And to compliment that, here's The Girl's (my wife's) list. Enjoy, and thanks for stopping by!

Understand technology and sport in the How-To Guides.

I enjoy explaining new things to folks – especially showing people how to get the most from their gadgets. Here's an ongoing list of "How to" guides.

Read my Top 25 most useful posts.

It turns our I've written a fair bit of stuff over the past few years – and after it disappears from my front page, a lot of it never really sees the light of day again without Google'ing skillz. Or a photographic memory…which I don't have. I've taken a look back and found stuff that…continues to find a trickle of readers via web searches or forum links.

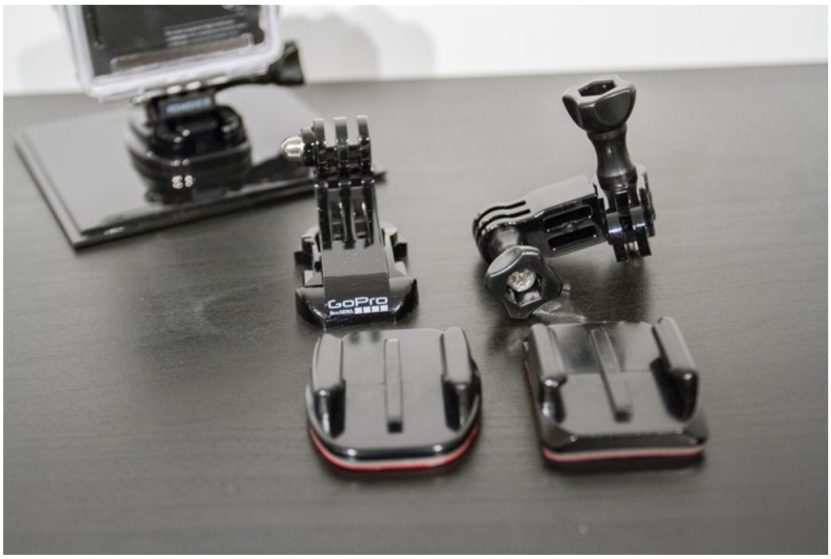

Have some fun in the travel section.

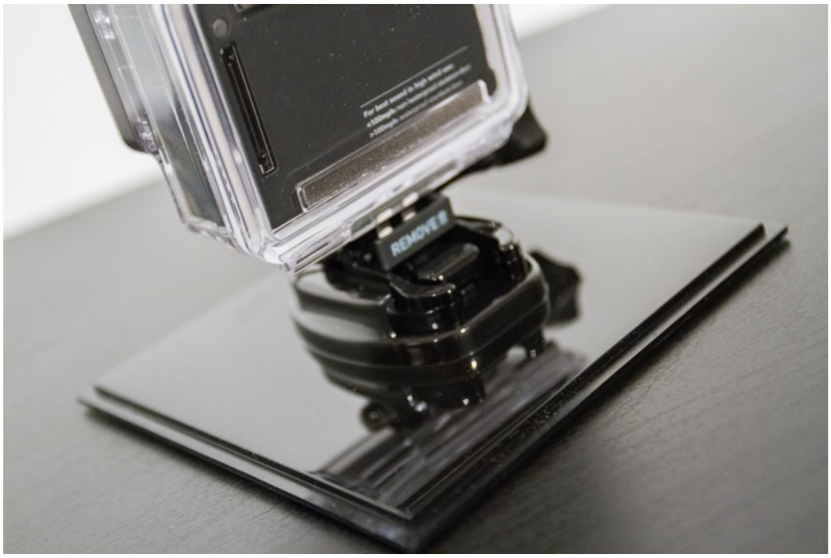

I travel a fair bit, both for work and for fun. Here's a

bunch of random trip reports and daily trip-logs that I've put together and posted. I've sorted it all by world geography, in an attempt to make it easy to figure out where I've been.

Both the Black and Silver come with the same set of mounts. You have two adhesive mounts, one being pancake flat, while the other is slightly curved (such as for a helmet). Behind it are two different mount pieces, one that holds the camera a little further back, while the other has less extension (it's attached to the baseplate to begin). Meanwhile they also include a few extenders and direction changers seen to the right.

Finally, we get to the camera itself, which comes in the waterproof housing. There is a secondary door (seen up above), that allows sound to be heard relatively clearly versus the fully sealed waterproof housing where it'll be rather muffled.

The bottom opens up identically on the Black and Silver, which is where you'll place the battery. There's a small little button you'll press that'll then pop open the door. It's a much better design than the annoying battery cover found on previous GoPro units.

Finally, on the side you'll have a small door you can pull off that includes the HDMI and mini-USB ports, as well as the MicroSD card slot.

Let's move onto the Silver edition now.

UNBOXED – HERO4 SILVER:

Next, the middle child of the group, the Silver. As you can see below, the parts are nearly identical to the Black in the earlier section.

The only difference in the box is the case doors. The Silver edition includes three doors (instead of two), and two of these doors are designed to allow you to operate the touch screen.

In the below photo, the two lower doors allow touch screen operation. The left one is completely open, while the right one has a thin flexible plastic.

That thin flexible plastic actually is two pieces of plastic, one of which you'll remove. The one to remove is the blue-tint one. If you somehow manage to remove the other one, you've totally hosed things up – since it's molded into the case.

Here's all three doors post-plastic removal:

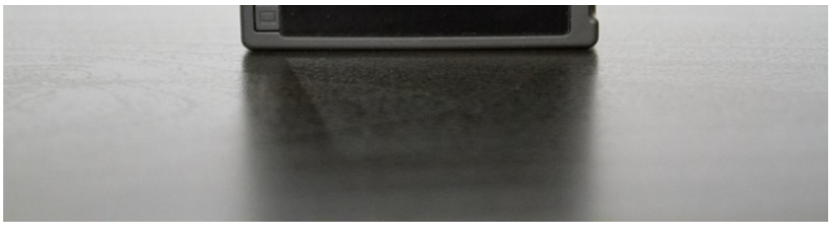

IMG_9653

Here's the front of the camera, as you can see, it's virtually identical to the Hero4 Black. Though, strangely in my case it actually has a small manufacturing defect on the front of the LCD screen. It hasn't bothered me though, and I'm too lazy to deal with returning it.

It's the back of the unit though that is significantly different, being the touch screen:

But don't worry, I'll dive into the touch screen in a moment – so hang tight there.

UNBOXED – HERO (BASE):

The 2014 GoPro Hero base unit is packaged slightly differently. For example it lacks the top plastic 'dome' found on the other/past units, as well as the plastic baseplate. Obviously at a fraction of the price they were looking to cut costs that were unnecessary, which, is completely reasonable.

Below are the components within the box. You'll find the two adhesive mounts (flat/curved), but only one mounting attachment piece between the GoPro and the adhesive mounts. Don't worry, you still get stickers.

You also get the secondary door (with holes, for letting sound in).

Meanwhile, here's a close-up of the front of the unit:

Now – and this next piece is really important to understand – the Hero base unit does NOT detach from the case. It's molded into the outer plastic shell. Said a third way, you cannot remove the grey camera from the outer clear plastic case.

This is an obvious departure from the past. Though, in using it – there's actually very little issue there in most situations for action cams. The main reason some people remove the camera from the case is to get it a bit smaller for various placement locations, or, to get rid of the glass off the front of the case (using the skeleton mount). But, for most people – heck, even kids – this makes it much harder to kill the camera.
