

AFFIDAVIT OF NATHANIEL E FRANK-WHITE

1. I am a Records Request Processor at the Internet Archive. I make this declaration of my own personal knowledge.
2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.
3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to browse more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a display of available dates. The visitor may select one of those dates, and begin browsing an archived version of the Web. Links on archived files in the Wayback Machine point to other archived files (whether HTML pages or other file types), if any are found for the URL indicated by a given link. For instance, the Wayback Machine is designed such that when a visitor clicks on a hyperlink on an archived page that points to another URL, the visitor will be served the archived file found for the hyperlink's URL with the closest available date to the initial file containing the hyperlink.
4. The archived data made viewable and browsable by the Wayback Machine is obtained by use of web archiving software that automatically stores copies of files available via the Internet, each file preserved as it existed at a particular point in time.
5. The Internet Archive assigns a URL on its site to the archived files in the format `http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL]` aka an "extended URL". Thus, the extended URL `http://web.archive.org/web/19970126045828/http://www.archive.org/` would be the URL for the record of the Internet Archive home page HTML file (`http://www.archive.org/`) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). The date indicated by an extended URL applies to a preserved instance of a file for a given URL, but not necessarily to any other files linked therein. Thus, in the case of a page constituted by a primary HTML file and other separate files (e.g., files with images, audio, multimedia, design elements, or other embedded content) linked within that primary HTML file, the primary HTML file and the other files will each have their own respective extended URLs and may not have been archived on the same dates.
6. Attached hereto as Exhibit A are true and accurate copies of browser screenshots of the Internet Archive's records of the archived files for the URLs and the dates specified in the attached coversheet of each printout.

7. I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct.

GoPro Hero 4 Official Specs: 4K/30fps, Built-in Touch Screen, 1080/120fps

[Ogy Stoilov](#) September 26, 2014 [Blog](#) [No Comments](#)

Rumors of the next generation of the most popular camera name in the world – the GoPro Hero have been circulating the web for a while now. As recently most major retailers started showing the Hero 3/3+ Black editions as discontinued, rumors started circulating and pointing to a March 2015 release for the new GoPro Hero 4, however we may get a glimpse of the next generation GoPro's much sooner than that.

It looks like PetaPixel have gotten themselves a hold of the official specs for the highly-awaited GoPro Hero 4. The mighty action camera will come in at least two editions – the top of the line 4K Black Edition, and Silver Edition, and one of them is rumoured to have a built-in LCD touch screen on the back. This is a major improvement as on previous editions the back LCD screen was not a touch screen and it was an extra add-on only.

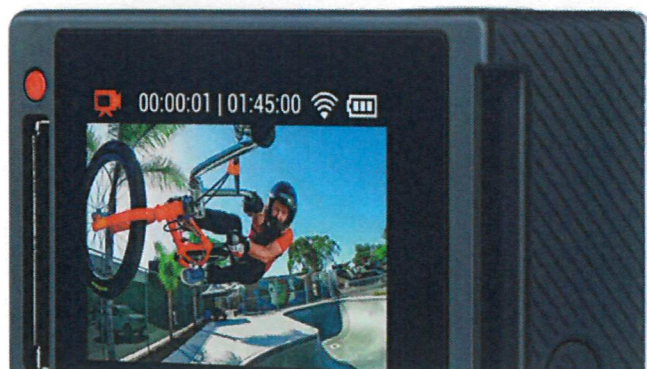

Apart from boasting the mandatory 4K/30p, the GoPro Hero 4 Black will feature a "2x more powerful processor, and improved image quality".

GoPro Hero 4 Black Edition Specs and Features:

- 4K at 30fps,
- 2.7K at 50fps,
- 1440p at 80fps,
- 1080p at 120fps,
- 960p/720p at 120fps,
- 240fps – probably not supported
- 12 megapixel photos at 30 frames per second
- Manual controls for Colour, ISO, exposure
- 2x Dynamic Range
- Ultra Wide, Medium, and Narrow – Field of view settings
- Waterproof to 40m (131 feet)
- Exposure Settings for Night time shooting
- HiLight Tag & QuikCapture
- Built-in Wi-Fi, Bluetooth
- Backwards compatibility with previous gen accessories

The Silver edition of the GoPro Hero 4 has basically the specs of the GoPro Hero 3+ Black with some improvements however it will not be able to do 4K video at 30fps, but will be limited to 15fps. According to PetaPixel, the GoPro Hero 4 Silver will have a built-in LCD touch screen display, not featured on the Black edition.

Manual controls over exposure and 4K at workable resolutions will propel the already massively successful GoPro Hero 3+ Black edition into another dimension. However, as of now, giving 4K/30p only to the Black Edition and stripping it from the built-in touch screen LCD is a bit of a shame. I am sure there will be some sort of an LCD add-on for the Black edition, but it would have been nice to have both 4K/30p and a touch screen LCD in the same model.

Apart from being the most popular camera among sports fanatic consumers, GoPros has been used on many Hollywood productions and independent features as well as TV drama's as crash cams and actions cam. With 4K/30p in a GoPro form factor the most popular camera in the world just got better.

Pricing and availability is unknown at this point, but it is believed the new GoPro Hero 4 will be announced officially on October 8th.
