OneTouch Mail

JP Systems

This is the email software I use all the time on my PalmPilot. It has all the power you'd expect in a full-featured, PC email program—but puts it into the palm of your hand. Send and receive mail from multiple email accounts, check message headers without downloading full messages, and much more.

PageNOW!

Space Softworks

Send a message to any paging device with this program. Hook up your PalmPilot to a modem, run this program, and it sends out the page for you.

Online

Space Softworks

Amazingly enough, you can turn your PalmPilot into a VT100 terminal emulator with this program. Dial into the Internet, and then run this program. You can also use Telnet or other terminal emulators.

Documents and Readers

J-File

Land-J Technologies

This has a whole lot of reference information for the PalmPilot—everything from travel information to business data, and more. To read much of it, you need a special database reader, and J-File is a great one. In addition to reading reference files, you can create databases of your own and can even import PC files and create PalmPilot database files out of them.

MobileDB

MobileGeneration

Read a variety of informational databases with this database reader. In addition to reading existing databases, it lets you create databases of your own from PC files.

TealDoc

TealPoint Technologies

If you're looking for a way to read many of the informational files available for the PalmPilot, here's where to go. It includes all the features you'll need to read documents, and it can even view embedded images.

Girls and Women in Sports Guide

Palmtop Publishing

Learn about women in sports with this informative, interactive pocket guide. You can learn about women's accomplishments in sports with a trivia quiz, and get a quick reference to foods and good health habits.

PenguinBackup

Rene Witte

If you're worried about a backup should your PalmPilot crash, this program's worth a try. It's a single, bootable 3.5-inch floppy disk that includes a complete operating system, utilities, and communication software for all kinds of Pilots (OS 1.x - 3.x).

Launch 'Em

Synergy Solutions, Inc.

Make it easy to find and launch your programs with Launch 'Em. You organize your applications into convenient folders that you name. You can also drag any application to the TrashCan, BeamMe, GitInfo, or BackMeUp icons to easily delete, beam, see detailed information, or change the backup status in any application.

SynCalc

Synergy Solutions, Inc.

If the PalmPilot Calculator isn't powerful enough for you, here's what you need. This powerful, scientific calculator has every kind of feature you can imagine, as well as a printer tape/calculation log of past calculations, and the capability to store up to 100 customized calculations covering business, medical, scientific, and other fields.

TealEcho

TealPoint Technologies

If you're looking to improve your Graffiti recognition, try this one. It shows you the letters as you draw them.

TealLock

TealPoint Technologies

This program protects your PalmPilot and all your vital data. It locks the device or individual items inside it and gives you many ways to customize security.

TealMagnify

TealPoint Technologies

Here's a simple program: You can magnify any portion of your PalmPilot screen by looking through a small, virtual magnifying glass.

TealMeal

TealPoint Technologies

Where to eat tonight? Find out with TealMeal. It's a database that lets you create and edit a list of your favorite restaurants, and lets you look by topics, category, and type of food.

TealPaint

TealPoint Technologies

Amazing, but true: You can draw on your PalmPilot. You'll be surprised at how sophisticated a drawing device your PalmPilot can be. Try it out, even if you can't draw a straight line.

TealScript

TealPoint Technologies

Tired of Graffiti constantly misreading what you write? Then try out TealScript, which makes it easy to teach Graffiti to better recognize your handwriting.

How to Use the CD

Using the CD is quite easy. Here's what you need to know.

System Requirements

To use the CD, you need a PC (sorry, Mac owners) with a 486 or better, 16MB of RAM, 265 colors, Windows 95, Windows 98, or Windows NT 4.0. And you'll need 90MB free hard disk space if you want to install every single piece of software on the CD.

Browsing the CD via the CD Interface

If you have AUTOPLAY turned on, then your computer will automatically run the CD after you put it into your CD drive. If AUTOPLAY is turned off, follow these directions:

1. Insert the CD-ROM into your CD-ROM drive.
2. From the Windows desktop, double-click the **My Computer** icon.
3. Double-click the icon representing your CD-ROM drive.
4. Double-click the icon titled **START.EXE** to run the CD.

The simple way to get up to speed with PalmPilot™ and Palm III™!

You may know your business like the back of your hand, but it would be foolish to try and keep it all in your head. Today's PalmPilot and Palm III let you track a busy schedule, people and addresses, to-do lists, memos, expenses, anniversaries, and more. And *The Complete Idiot's Guide to PalmPilot and Palm III* shows you how to make the most of those hand-held organizers.

Want to keep every aspect of your business and personal life organized and on-track? Keep track of all your contacts? Exchange data with Excel? Keep your PC and Palm computer in sync? How about connecting to the Internet world from the palm of your hand? It's all spelled out easily (and with great humor) in this guide. All you need to do is grab hold of it. Oh, and pay for it. There should be someone at the counter.

PRESTON GRALLA is a longtime journalist with Ziff-Davis Publications and an executive editor for the ZDNet Software Library. He also authored the popular *How the Internet Works, Fourth Edition* and *The Complete Idiot's Guide to Online Shopping*.
