HOW CAN I PRINT FROM MY PDA?

For portable printing, check out the Pentax PocketJet printer, which uses an Infrared (IR) port. The size and port usage make it a very PDA-friendly choice. You can also use any other printer that can receive data via IR. However, you'll need software. If your PDA does not ship with a printing application (and few of them do), download the InStep Group's Print. The InStep Group makes several other document-oriented PDA applications, such as a program for faxing. You can also try TealPrint from [TealPoint](#) Software, which lets you print via your HotSync port (which means you can print through any USB or serial port-enabled printer), as well as Bachman Software's Bachman Print Manager. Note that these programs all let you print from most PDA applications.

HOW CAN I FAX MY DOCUMENTS WITH MY PDA?

InStep Fax, an add-on to the InStep Print program, is by far the most popular PDA faxing software. InStep Fax will fax via a mobile phone IR connection or any other connection device capable of sending Class 1 or Class 2 facsimile data. CDPD modems, such as the Minstrel series, would work just fine. Also, check out Mark/Space Software's Fax program, which supports many wireless device types and can transmit via IR.

Personal PDA Conveniences

This section covers features and software options that make your PDA into a personal tool. You can track your finances and your stocks and read e-books at leisure. Also discussed is choosing a PDA or accessory that provides auto-location.

HOW CAN I TRACK MY EXPENSES WITH MY PDA?

Most PDAs ship with the Expense 1 program, a basic application for expense accounting. You may also want to look up MobiTech System's Time and Expense Tracker or Solid Rock Group's BudgetMaster.

HOW CAN I VIEW AND TRACK STOCKS WITH MY PDA?

TinyStocks' Stock Manager manages your stock portfolio on your PDA. You can wirelessly check stock prices and synchronize the new prices on your PDA. Or, you can wait until you HotSync to synchronize stock prices. Also check out Olotek's OLOSTock, a PDA application that provides stock quotes and charts to mobile PDAs. You can easily track stocks and receive stock quotes and charts for any U.S.- or London-traded equities. Set up your own stock "watch list" or portfolio and then create charts reflecting various intervals. For example, you can make weekly, monthly, quarterly, or yearly stock charts.

HOW CAN I READ BOOKS ON MY PDA?

One of the great advantages of a PDA is that it allows you to store and view novels. Hundreds of novels are available. PDA reader applications are designed to improve your reading experience, with features that make it easy to sit back and read novel-sized documents. Good document reader programs come with a number of selectable font sizes for reducing eyestrain, and a variety of document-scrolling methods. Variable line-spacing options are helpful as well. For hands-free reading, auto-scrolling is a must. Good PDA readers include Bill Clagett's CSpot Run, [TealPoint](#) Software's TealDoc, and Palm's own Palm Reader, which features a huge number of e-novels due to its purchase of the venerable peanutpress.com books (see Figure 2-13).

From cellphones, e-mail pagers, and WLANs to specialized inventory and tracking applications, wireless technology is transforming how the world does business. But with so many competing devices and standards, how do you choose the best wireless technologies for yourself and your organization? This practical guide delivers the answers. Taking a detailed, critical look at today's cellphones, PDAs, pagers, mobile data devices, and wireless networking options, as well as expected upgrade paths, *Wireless Devices End to End* helps you effectively plan and implement the right wireless solutions.

Make the Most of Wireless Devices

- Delve into the nuts and bolts of wireless networking, from WLAN options to wireless routers
- Find out how the Palm OS devices stack up against Pocket PCs in the wireless world
- Discover how personal area networks, wireless digital paper, Bluetooth, GPS, and other technologies fit into the picture
- Take a look at the latest trends in mobile data, from BlackBerry to WAP, i-mode, and Symbian devices
- Get an incisive "techs and specs" rundown of each technology to help you make the right purchase or upgrade decisions
- Get a glimpse of what the future holds for cellphones, pagers, and the new PDA/phone devices

Your Hands-on Guide to the Wireless

WINSTON STEWARD develops software for nonprofit organizations and has written more than a dozen books on networking, wireless networking, and other technologies.

BILL MANN is a veteran technical writer and computer book author who has been part of the wireless documentation team at Intel for over 10 years.

RON GILSTER (Series Editor), A+, Network+, and CCNA, is the author of more than a dozen bestselling computer books. He has worked for more than 20 years, most recently at a large regional wireless provider.

CCNA, is the author of more than a dozen books on networking, wireless networking, and other technologies. He has worked for more than 20 years, most recently at a large regional wireless provider.
