CD-ROM
for PC & Mac

PalmPilot

The Ultimate Guide

O'REILLY™

ETN1035

1/6
David Pogue

Off button, so that you can shut the thing up without even having to open your eyes. Wes Cherry, \$5, <http://www.scumby.com/scumbysoft/pilot>.

Bug Me!

Lets you quickly jot a note on the PalmPilot (either Graffiti or your actual handwritten scrawl, stored as a graphic) and set an alarm to have the note pop up and bug you at the appropriate time. Bug Me! is great when you need to remember something in an hour or so but don't want to bother with setting an alarm in the Date Book. (See Figure A-2.) Haus of Maus, \$10, <http://www.hausofmaus.com>.

ClockHack

This "hack" puts a tiny digital clock readout at the corner of your screen at all times. Requires HackMaster, described later in this chapter. Haus of Maus, free, <http://www.hausofmaus.com>.

ClockWorks

A huge digital day/date clock, with stopwatch. Andrew Ball, \$7, <http://www2.cyg.net/~aball>.

Pilot Clock

A wonderfully designed, useful multifunction clock, stopwatch, countdown timer, and alarm. It can show a second timezone and battery meter. This is perhaps the best of the bunch. Little Wing Software, \$15, <http://www.lwsd.com>.

TealGlance

Shows an elegant screen full of important information (date, time, battery condition, Date Book entries for today and tomorrow, to-do items, and more) whenever you turn on the PalmPilot. A delight. (See Figure A-2.) TealPoint Software, \$12, <http://www.tealpoint.com>.

Timerz

A countdown timer for four simultaneous events. You can set a different message, and/or a beep, for each timer when it reaches zero. Cyclos, \$15, <http://www.cyclos.com>.

WorldClock

Want to know the time in six different locations simultaneously? This one does it! Pay the shareware fee to unlock the program's knowledge of nearly 300 countries' timezones. Tintagel Software, \$10, <http://jp97.inet-images.com/tintagel>.

More examples of clocks and timers include *Analog Clock* (analog clock with day and date); *PalmWorld* (see Figure A-2), *TimeZone*, *World Time*, or *EarthTime* (shows time and/or map location of major world cities); *Egg Timer*, *FPS Clock* (analog clock); *LookAtMe* (launches a chosen PalmPilot program at an appointed time); *PocketTimer* or *TikTok* (sports-oriented stopwatches); and *Y2K* (shows remaining time until the year 2000).

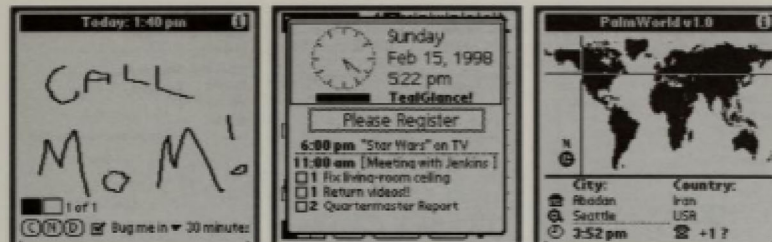

Figure A-2. From left to right: BugMe, Teal Glance, and PalmWorld.

Database Programs

Jfile

An actual database program, along the lines of FileMaker or Microsoft Access. (See Figure A-3.) Features popup lists, integers, floating point numbers, checkboxes, dates, and password protection. (Also: *Jfile Converter*, a Macintosh program that prepares database files for *Jfile*.) Land-J Technologies, \$20, <http://www.land-j.com/pilprogs/html>.

J-Shopper

A shopping-list program. Use it to store items you need at up to 10 different stores. It even tracks coupons. Land-J Technologies, \$10, <http://www.land-j.com/pilprogs/html>.

Pendragon Forms

Lets you design your own custom fill-in forms on Windows and, after HotSyncing, begin collecting data right away. (See Figure A-3.) Collected data is automatically HotSynced back to the PC, where it can be viewed or exported to Microsoft Access, Excel, or ASCII files. Pendragon, \$50 (free demo is on this book's CD-ROM), <http://www.pendragon-software.com>.

Satellite Forms

A powerful commercial database program. You design custom data-collection screens on your PC. Your coworkers can then venture forth into the field, gathering data; the collected information can then be collated into standard corporate databases (such as DB2, Oracle, Lotus Notes, Microsoft Access, and so on). The software suite supports plug-ins, too, including one that makes the program infrared-ready. \$600, <http://www.softmagic.com>.

More examples of database programs include *Simpledb* (creates up to 10 custom databases with five fields each, as shown in Figure A-3); *Jet File* (synchronizes your *Jfile* databases with a Microsoft Access application); and *Jet Pilot* (a programmer's tool that reads and writes data from the PalmPilot's Address, Date Book, Memo Pad, and to-do programs).

Graffiti Help

An online Graffiti reference card. Not necessary in PalmPilot, WorkPad, or Palm III machines (which have a built-in Graffiti reference card), but useful on the original Pilot models. Bill Kirby, free, <http://www.electronbut.com/pilot>.

Macros

Creates Shortcuts containing characters that you can't otherwise type into the normal Shortcuts window. For example, you can incorporate cursor-direction controls into your Shortcuts, so that a single penstroke creates parentheses and puts the insertion point between them. Stephen Millman, free, StephenM35@aol.com.

Select Hack

Lets you double-click to select a word, or triple-click to select a paragraph, exactly as in real word processors. Requires HackMaster, described later. Jeff Jetton, \$5, <http://www.mindspring.com/~jetton/pilot/index.html>.

TealEcho

An essential aid for mastering the Graffiti alphabet: as you write in the Graffiti writing area, you see what you've actually just drawn. (See Figure A-9.) Great feedback for increased accuracy. TealPoint Software, \$12, <http://www.tealpoint.com>. (Similarly: *Grafiid*, which is free, but not quite as polished.)

WPM (Words Per Minute)

Measures your Graffiti speed, in words per minute. DDH Pilot Software, free, <http://www.gate.net/~dbaupert/ddhpilot.html>.

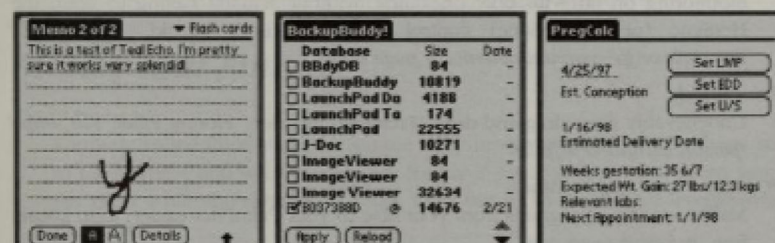

Figure A-9. From left to right: TealEcho, BackupBuddy!, and PregCalc.

Graphics

See Chapter 10, *The PalmPilot's Secret Multimedia World*, for in depth reviews of the various drawing and painting programs: *ImageConverter* (shows grayscale photos); painting programs like *DinkyPad*, *Doodle*, *TealPaint*, *PenDraw*, *Qpaint*, *HDSketch*, *ScratchPad*, and *SketchPad*; and drawing programs like *PalmDraw* and *QDraw*.

FontHackPlus

Lets you change the font used in any PalmPilot program, even on pre-Palm III machines. Comes with some new fonts to try. Rick Bram, free, <http://www.palmglyph.com/font.html>.

GlowHack

Automatically turns on your PalmPilot's backlight whenever you use your PalmPilot during specified hours. Dovcom, free, <http://www.dovcom.com/pilot/glowback.html>.

HackMaster

This is the master On switch and control panel that makes hacks possible—additions to the PalmPilot operating system. Offers a convenient list of checkboxes that let you turn various hacks on and off. Most of these hacks are described in this section, and are indispensable. Daggerware, \$5, <http://www.daggerware.com/hackmstr.htm>.

MenuHack

Lets you pull down PalmPilot menus by tapping at the top of the window, just as you do on your PC or Mac, instead of having to tap the Menu icon at the bottom of the screen. One of the most useful hacks of all time. Daggerware, free, <http://www.daggerware.com>.

SilkHack

Lets you remap the rounded, plastic, silkscreened buttons at the bottom of the PalmPilot to other programs. In fact, you can set each quadrant of each button to launch a different program. Press the upper-left corner of the Memo Pad button to launch one program; the upper-right to launch another; and so on. Requires HackMaster. StingerSoft, free, <http://ptlot.cc-inc.com/palmpilot>.

SnoozeHack

Adds a Snooze button to Date Book alarms. Also offers different alarm sounds and a flashing backlight (as if that will wake you up!). Iain Barclay, free, <http://www.bausofmaus.com/snoozer.html>.

SwitchHack

With one click, switches between the currently running program and the last one you used. Also creates a pop-up menu of the ten programs you've most recently used—an incredibly valuable time-saver. Requires HackMaster. Deskfree Computing, \$5, <http://www.deskfree.com/SwitchHack.html>.

TealMagnify

An easily-accessible magnifying glass lens that works with most any program. Requires HackMaster. TealPoint Software, \$12, <http://www.tealpoint.com>.

UnDupe

Removes duplicate entries from your built-in PalmPilot programs. Stevens Creek Software, \$5, <http://www.stevenscreek.com/pilot>.

PalmPilot: The Ultimate Guide

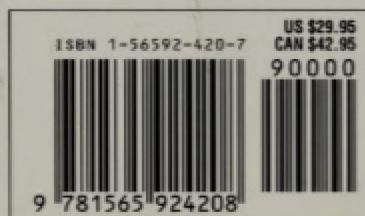

3Com's PalmPilot is the world's bestselling handheld PC. In two years, it has captured 70 percent of the palmtop market. About the size of a playing card, the PalmPilot is a fast, elegant, lightweight organizer with a touch screen.

PalmPilot: The Ultimate Guide is the bible of the Palm OS. It covers all three generations of Palm OS palmtops—original Pilots, PalmPilots, and the 1998 model, the Palm III—as well as OEM models such as the IBM WorkPad. Dense with undocumented information, it contains hundreds of timesaving tips and surprising tricks. The book includes:

- A getting-started tutorial, including tricks that make using the PalmPilot's Graffiti handwriting-recognition alphabet faster and more accurate.
- How the PalmPilot works with your PC. Special coverage is given to HotSync—the one-touch, two-way synchronizing of data between the PalmPilot and a Macintosh or Windows PC.
- Using the PalmPilot online. This book covers the four Pilot World Wide Web browsers, the six e-mail programs, plus the PalmPilot's paging, faxing, and infrared beaming features.
- Troubleshooting both software and hardware, including HotSync snafus. Special chapters cover upgrading and accessorizing the PalmPilot.
- Taking the PalmPilot far beyond its designers' original expectations. Despite its tiny size, the PalmPilot expertly runs graphics, music, teleprompter, database, global-positioning, and other software. A highlight of the book is a tutorial on writing your own Palm OS software, using Metrowerks CodeWarrior Lite (included with the book).

PalmPilot: The Ultimate Guide is the most comprehensive Pilot book yet written. With the cooperation of Palm Computing, 3Com, and Metrowerks, bestselling computer-book author David Pogue succinctly answers every conceivable question, unlocks features most Pilot users never suspected, and radiates the fun, passion, and sense of community shared by Piloteers the world over. The enclosed CD-ROM (Macintosh, Windows 9x, and NT compatible) includes over 900 programs—the entire contents of ISO Productions' *Everything CD for PalmPilot* (a \$25 value)—plus Metrowerks' CodeWarrior Lite programming kit and a trial version of IntelliSync, the leading multiprogram HotSync translator. *PalmPilot: The Ultimate Guide* is the essential guide for the PalmPilot owner.

David Pogue is a Macworld columnist and the bestselling author of *Macs for Dummies*, *Macworld Mac Secrets*, *Magic for Dummies*, and *Tales from the Tech Line*.
