9. Too old for a Game Boy, but can still play Pac Man on your Palm.
8. Snap-in gadgets for the Visor make you look like a spy.
7. As a *Star Trek: The Next Generation* fan, you like to pretend you're an Enterprise crewmember on an away mission.
6. As a *Star Trek: The Original Series* fan, you like to pretend you're an Enterprise crewmember in a landing party.
You know, for me, the funny thing is you have to be a *Star Trek* fan to even appreciate the difference between those last two items.
Rick: For me, it's funny to hear Dave describe any of his half of the list as "funny."
5. Gives you a great pickup line: "Hey, let's HotSync!"
4. When tipping the pizza guy, now you can calculate 15 percent of \$36.87 to the exact penny.
3. No one can tell you're reading Monica Lewinsky's biography.
2. You can look busy in a board meeting when you're actually playing a game of SimCity.
1. They don't put a single penny into Bill Gates's pocket!

Dealing with Documents

If you're like most business travelers, you're used to carting a laptop around with you to edit Word documents. If you have a 14-inch or 15-inch display, then you know what it's like trying to get the laptop screen open in the cramped space on an airplane seat. Heck, sometimes we can't get it open far enough to read what we're typing.

Thankfully, there's an easier solution. Your Palm—combined with a keyboard—can take the place of your laptop for text entry. You can even synchronize specific Word documents with your Palm, edit them on the road, and update your desktop PC with the latest versions of your work when you get home.

Understanding the Doc Format

All Doc files aren't created alike. Specifically, when Palm users talk about Doc files—text documents in the Doc format—they're not gabbing about Microsoft Word's .doc format but, instead, about a text format originally popularized by a program called AportisDoc. These days, programs like TealDoc (from [TealPoint](#)) and Palm's own Palm Reader are generally

considered the de facto standard among Palm text readers today. While any Doc file can be read by almost any Doc reader/editor for the Palm (and vice versa), the Doc format is totally incompatible with the version used by Microsoft Word. On the plus side, you can generally get converters for most of these readers that convert desktop .doc to Palm Doc files and back again.

Using an Office Suite

Pocket PC users have one small advantage over Palm users—a Microsoft-branded office suite that includes Pocket Word and Pocket Excel. People can trust those apps to be compatible with Microsoft Office on the desktop.

What a lot of people don't realize, though, is that there are several excellent Office-compatible suites for the Palm. Most Palm models come with one right in the box, in fact: Documents to Go, from DataViz. If your Palm-powered PDA didn't come with an office suite—or you want to try another, you'll be happy to know you can choose from three popular suites:

- **Documents to Go (www.dataviz.com)** Documents to Go is quite popular by virtue of the fact that Palm has chosen to put it in the box of every new Palm model it sells. In addition to a word processor (Word to Go) and spreadsheet (Sheets to Go), the Professional edition of Documents to Go includes the capability to view (but not edit) PowerPoint slides and Adobe Acrobat (PDF) files.

- **Iambic Office (www.iambic.com)** Comprised of FastWriter and TinySheet, these programs offer Word and Excel connectivity for your Palm. In addition, the suite includes *Iambic Mail*, an e-mail client that lets you synchronize messages with your

- **Show ink** If you prefer not to see the trail of “ink” as you write, uncheck this box.
- **Ink width** Choose 1 for a thin trail of ink, 2 for a thicker trail. This is simply a matter of personal preference.

When RecoEcho is activated, you see a large arrow at the top of the screen. This designates an invisible line separating the letter and number sides, just like in the standard Graffiti area. Now, write on the screen as you normally would, and presto: you’re free to write as large as you like.

The Best Little Graffiti Tweak in Town

Part of the challenge in learning and mastering Graffiti is that you can’t see your characters as you write them. (Actually, if you have HandEra’s 330 or Sony’s CLIE NR70, you can—their virtual Graffiti areas leave a trail of digital ink beneath your stylus. Very cool.)

That’s where TealEcho comes in. This simple utility displays your pen strokes on the main screen as you make them in the Graffiti area. As a result, you can gauge just how accurate (or inaccurate) your characters are. Sounds like no big deal, but trust us when we say TealEcho goes a long way toward improving Graffiti accuracy.

Graffiti, Your Way

Finally, we come to the one product that really manhandles Graffiti, that says, “Look, can’t you just learn to understand *my* writing?” It is [TealFont](#) Software’s TealScript, a utility that lets you tweak Graffiti so it’s more responsive to your style, or replace it altogether with a customized character set.

If you’re willing to battle one of the steepest learning curves we’ve encountered in a piece of Palm software, the benefits are truly worthwhile. TealScript works its wizardry through the use of custom profiles, which contain the Graffiti character set as you define it. In other words, you teach TealScript how you like to write, and it teaches Graffiti to accommodate your penmanship.

The letter *v* is a good example of how this works. Your profile can include the standard character—the one with the little tail we always forget to add—and a regular *v* you added

How to Do *Everything* with Your

Palm™ Handheld Third Edition

Maximize your Palm's potential by accessing essential and in-depth information on all of your handheld PC's features—including Palm accessories and third-party software. Written by a pair of savvy authors steeped in leading-edge handheld technology, *How To Do Everything with Your Palm™ Handheld, Third Edition* will help you work smarter, play better, and do more with your Palm handheld than you ever thought possible. Learn to use the core applications more effectively, discover amazing business and entertainment software, and go online for e-mail and Web browsing. Plus, protect your data with robust security, and take advantage of new and exciting multimedia features.

- ★ Manage addresses, appointments, expenses, tasks and memos
- ★ Organize in the home or office with Palm Desktop and Microsoft Outlook
- ★ Learn to install new software—including OS 5—and beam programs to other handheld users
- ★ HotSync anywhere with infrared, modem, Bluetooth, or cable
- ★ Use Graffiti more effectively with undocumented alternative gestures
- ★ Customize Date Book with alarms, privacy features, repeating events, and more
- ★ Create memos, task lists, electronic business cards, and much more
- ★ Use third-party utilities to extend the capabilities of your Palm, Visor, Treo, Clie, or other handheld PC
- ★ Supercharge your Palm into a complete laptop replacement with Word, Excel, and PowerPoint compatibility
- ★ Optimize your PDA for the road with applications, charging solutions, and more

ABOUT THE AUTHORS:

Dave Johnson is the author of two dozen books, editor of *Handheld Computing Enterprise* and *Wireless* magazine, and an avid Palm user. He co-authored the previous editions of the best-selling *How to Do Everything with Your Palm Handheld*.

Rick Broida is the founder and editor of *Handheld Computing*, the first print magazine specifically for Palm users. He co-authored the previous editions of the best-selling *How to Do Everything with Your Palm Handheld*.
