New & Updated Mobile Software

Get More Done With Your Mobile Device

Looking to improve the functionality of your mobile phone? We compiled the most recently released applications and program updates for smartphones to help business travelers maximize the potential of their mobile devices.

Mobiata's FlightTrack Pro helps you track your flights, including connection and gate information, in real time.

NEW TITLES FOR ANDROID

FlightTrack Pro (\$4.99; www.mobiata.com) from Mobiata delivers real-time flight information to your Android home screen. The data comes from FlightStats, which updates information about flights across the globe. An offline mode lets you check previously downloaded flight details, such as connection and airport gate information, while on the plane. You can add itineraries up to 11 months in advance, and FlightTrack will automatically check for updates beginning three days before your flight. If a flight is canceled, FlightTrack can help you find alternate flights to your destination.

Simultaneously chatting via multiple instant messaging applications can tax your phone and your patience. **eBuddy For Android** (free; www.ebuddy.com) can combine your AIM, ICQ, Facebook, Google Talk, MSN, and Yahoo! accounts and provides a single buddy list for all your accounts. You can sign in to all accounts at once or select a single app. Alerts for new messages appear in the Android Status Bar. You can also configure eBuddy to play sounds or vibrate your phone for message notification. Clicking the Chats tab displays all your open chats.

Getting information about the businesses and shops around you is easy with **Geodelic** (free; www.geodelic.com) from Geodelic Systems. You can search by category type, such as Restaurants or Bars & Nightclubs; locations, such as stores in the mall; or by a particular brand. Geodelic will generate a carousel of options, which you can spin to view what's available near your current location. As you move, Geodelic can provide alerts for events or discounts at nearby locations. If you click a listing, Geodelic will display contact information, store hours, customer reviews, and other helpful tidbits.

► NEW TITLES FOR WINDOWS MOBILE

Grooveshark is a popular online music streaming tool that lets you listen to specific songs or artists on demand. And with **nanoGroove** (\$4.99; nanogroove.net), you can access the Grooveshark service on your Windows Mobile phone. The touchscreen interface lets you load your existing Grooveshark playlists, view album art, and add songs to your playlist.

Windows Live For Mobile (free; www.windowsliveformobile.com) from Microsoft lets you access the host of Windows Live features, including Hotmail, Messenger, Windows Live Spaces, and Bing. Using Windows Live For Mobile, you can download and sync contacts from your Hotmail, Windows Live, and MSN accounts, or respond to emails with voice recordings. Added functionality with Windows Messenger lets you send and receive photos and files. From Windows Live, you can post updates, upload photos, and send invitations to friends.

► NEW TITLES FOR MULTIPLE PLATFORMS

iZUP (\$4.95 a month or \$49.95 per year; www.getizup.com) from Illume Software is an innovative program designed to reduce cell phone distractions while you are driving. iZUP utilizes the GPS in your phone and other conditions to determine when you're driving. If you are driving, the app will block incoming calls and text messages until you can safely use your phone. The application also blocks outgoing calls and texts while you're driving—except for 911 and calls to and from a limited number of authorized numbers.

iZUP helps you keep your mind on the road by blocking incoming and outgoing calls (except 911 and authorized numbers) while you're driving.

► NEW TITLES FOR BLACKBERRY

Ever need to send a text message that exceeds the 160-character limit on your RIM BlackBerry? **Textender** (\$2.99) from BerryCodes (berrycodes.net) lets you type beyond the character restrictions. Just open the Textender program, type your message, and tap Send. Textender saves your sent messages, so you have a record of what you said. You can send messages to as many as six contacts at once. Textender is available through **MobiHand** (www.mobihand.com) and **BlackBerry App World** (appworld.blackberry.com).

MailSite Software released Version 4.0 of **AstraSync** (\$49 per user, per year; www.astrasync.com), an application designed to synchronize your email, calendar, and contacts without the need for BlackBerry Internet Service or BlackBerry Enterprise Server. The update includes support for HTML messages and hotlinks to telephone numbers, mail addresses, and URLs. AstraSync also lets you accept or decline meeting requests, flag messages, and attach files stored on your corporate network to outgoing email. For convenience, version 4.0 lets you select multiple messages to move or delete.

Triplt (free; www.tripit.com) is a popular travel itinerary tool for iPhone and Android phones, and now it's available for RIM's BlackBerry. The app lets you sync itineraries with the built-in BlackBerry calendar and the Outlook Calendar on your phone. Triplt can even load travel plans from corporate booking sites and travel agencies. You can dial phone numbers from your Triplt Itinerary directly from the program, and it provides maps and directions to get you to your destinations. The offline mode lets you view trip details without needing Internet access.

AstraSync lets you take advantage of two-way synchronization through Exchange ActiveSync servers.

► NEW TITLES FOR WEBO5

Google announced a new version of its **Google Voice** (free; www.google.com/voice) Web application with support for HTML5 and new features that improve the speed and functionality of Web tools. You can use the application to make calls, send text messages, and access your Google contacts. Sign up for a Google phone number and text messaging is free. You can also use Google Voice to read text transcripts of voicemails. For making calls outside the U.S., Google Voice now lets you add credits directly from your phone.

IM+ For Skype (\$9.99; www.shapeservices.com) is Shape Service's Web app for using SkypeOut to make and receive phone calls or instant message Skype contacts. The app does not require Wi-Fi and works on all carriers' networks. With IM+ For Skype, you can take advantage of the reduced rates or free calls using Skype, particularly if you are calling or receiving a call from an international number.

Business travelers often need to be aware of world times, and with **TealTime** (\$4.99; www.tealpoint.com) from TealPoint Software, you'll have an app that delivers a 3D world clock, countdown timer, stopwatch, and alarm clock. There's a timepiece you can configure to show multiple time zones, as well. You can also set up a dashboard that displays the times when you are using other programs. You can use the stopwatch to calculate averages for your timings and display linked lap timers.
