Authorization or Opt-Out of Authorization to Permit Access:

When this Application Data Sheet is properly signed and filed with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE: This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. Priority Document Exchange (PDX) - Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the State Intellectual Property Office of the People's Republic of China (SIPO), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h)(1).

B. Search Results from U.S. Application to EPO - Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

☐ A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

☐ B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with search results from the instant application.

NOTE: Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.

CONFIGURABLE LIGHTING SYSTEM

CROSS REFERENCE TO RELATED APPLICATIONS

5 The present application is a continuation application of and claims priority to U.S. Patent Application No. 15/435,141, filed February 16, 2017, and titled “Configurable Lighting System,” which claims priority to U.S. Provisional Patent Application Number 62/297,424 filed February 19, 2016, and titled “Configurable Lighting System”. The entire contents of the foregoing applications are hereby incorporated herein by reference.

10 TECHNICAL FIELD

Embodiments of the technology relate generally to lighting systems and more specifically to lighting systems that can be readily configured to produce illumination of different color temperatures.

15 BACKGROUND

For illumination applications, light emitting diodes (LEDs) offer substantial potential benefit associated with their energy efficiency, light quality, and compact size. However, to realize the full potential benefits offered by light emitting diodes, new technologies are needed.

20 With luminaires that incorporate incandescent or fluorescent technology, some flexibility can be obtained by swapping lamps to meet user preferences. In such luminaires, lamp selection can provide flexibility in terms of correlated color temperature (CCT or color temperature) and light output (lumen output). For example, a compact fluorescent downlight might accept 6-, 32-, and 42-watt lamps in 2700, 3000, and 3500 K
25 CCT. Additionally, changing lamp position and focal point in a reflector of an incandescent or fluorescent fixture can change the fixture spacing criteria (SC) of a luminaire.

5 In contrast, conventional light-emitting-diode-based luminaires typically offer reduced flexibility when the luminaire's light-emitting-diode-based light source is permanently attached to the luminaire. Stocking conventional light-emitting-diode-based luminaires at distribution to accommodate multiple configurations that users may desire can entail maintaining a relatively large or cumbersome inventory.

10 Need is apparent for a technology to provide a light emitting diode system that can adapt to various applications, for example by delivering multiple color temperatures, multiple lumens, and/or multiple photometric distributions. Need further exists for a capability to enable a single luminaire to be stocked at distribution and then quickly configured according to application parameters and deployment dictates. Need further exists for luminaires that are both energy efficient and flexible. A capability addressing one or more such needs, or some other related deficiency in the art, would support improved illumination systems and more widespread utilization of light emitting diodes in lighting applications.

SUMMARY

20 In some aspects of the disclosure, a system can configure a luminaire for providing illumination of a selected color temperature, a selected lumen output, or a selected photometric distribution based on an input. The input may be field selectable or may be selectable at a distribution center or at a late stage of luminaire manufacture, for example.

25 In some aspects of the disclosure, the luminaire can comprise at least two light sources having different color temperatures. In a first configuration, the luminaire can produce illumination of a first color temperature using a first one of the light sources. In a second configuration, the luminaire can produce illumination of a second color temperature using a second one of the light sources. In a third configuration, the luminaire can produce illumination of a third color temperature using both of the first and second the light sources. The third color temperature may be between the first and second color temperatures. The value of the third color temperature within a range between the first and second color temperatures can be controlled by manipulating the

relative amounts of light output by the first and second light sources. That is, adjusting the lumen outputs of the first and second light sources can define the color temperature of the illumination produced by the luminaire in the third configuration.

5 In some aspects of the disclosure, the luminaire can comprise at least two light sources having different lumen outputs. In a first configuration, the luminaire can produce illumination of a first lumen output using a first one of the light sources. In a second configuration, the luminaire can produce illumination of a second lumen output using a second one of the light sources. In a third configuration, the luminaire can produce illumination of a third lumen output using both of the first and second light
10 sources.

In some aspects of the disclosure, the luminaire can comprise at least two light sources having different photometric distributions. In a first configuration, the luminaire can produce illumination of a first photometric distribution using a first one of the light sources. In a second configuration, the luminaire can produce illumination of a second
15 photometric distribution using a second one of the light sources. In a third configuration, the luminaire can produce illumination of a third photometric distribution using both of the first and second light sources.

In some aspects of the disclosure, a circuit and an associated input to the circuit can configure a luminaire for providing illumination having a selected property, for example a selected color temperature, a selected lumen output, or a selected photometric
20 distribution. The input can be settable to a first number of states. The circuit can map the first number of states into a second number of states that is less than the first number of states. For example, the input can have four states and the circuit can map these four states into three states. The three states can correspond to three different values of the illumination property, for example three different color temperatures, three different
25 lumen outputs, or three different photometric distributions.

The foregoing discussion of controlling illumination is for illustrative purposes only. Various aspects of the present disclosure may be more clearly understood and appreciated from a review of the following text and by reference to the associated
30 drawings and the claims that follow. Other aspects, systems, methods, features,

advantages, and objects of the present disclosure will become apparent to one with skill in the art upon examination of the following drawings and text. It is intended that all such aspects, systems, methods, features, advantages, and objects are to be included within this description and covered by this application and by the appended claims of the application.

BRIEF DESCRIPTION OF THE DRAWINGS

Figures 1A, 1B, 1C, 1D, 1E, 1F, 1G, 1H, 1I, 1J, and 1K (collectively Figure 1) illustrate views of a luminaire in accordance with some example embodiments of the disclosure.

Figure 2 illustrates a functional block diagram of a circuit that a luminaire can comprise in accordance with some example embodiments of the disclosure.

Figure 3 illustrates a state table for a circuit that a luminaire can comprise in accordance with some example embodiments of the disclosure.

Figure 4 illustrates a schematic of a circuit that a luminaire can comprise in accordance with some example embodiments of the disclosure.

Many aspects of the disclosure can be better understood with reference to the above drawings. The drawings illustrate only example embodiments and are therefore not to be considered limiting of the embodiments described, as other equally effective embodiments are within the scope and spirit of this disclosure. The elements and features shown in the drawings are not necessarily drawn to scale, emphasis instead being placed upon clearly illustrating principles of the embodiments. Additionally, certain dimensions or positionings may be exaggerated to help visually convey certain principles. In the drawings, similar reference numerals among different figures designate like or corresponding, but not necessarily identical, elements.

DESCRIPTION OF EXAMPLE EMBODIMENTS

In some example embodiments of the disclosure, a luminaire can comprise multiple groups of light emitting diodes of different color temperatures and a constant current power supply for powering the light emitting diodes. The power supply can
5 utilize a switching scheme that can turn each group of light emitting diodes on and off to change the color temperature of the luminaire. In some example embodiments, the power supply can further vary the relative intensities of the light emitting diodes to manipulate the color temperature of the luminaire within a range.

For example, the luminaire can comprise a 3,000 K group of light emitting diodes
10 and a 4,000 K group of light emitting diodes. When only the 3,000 K group is on, the luminaire can deliver 3,000 K illumination. When only the 4,000 K group is on, the luminaire can deliver 4,000 K illumination. When the 3,000 K group and the 4,000 K group are both on, the luminaire can deliver 3,500 K illumination. If the 4,000 K group of light emitting diodes is concurrently operated at a low lumen output and the 3,000 K
15 group is operated at a high lumen output, the luminaire may deliver illumination of another selected color temperature, for example 3,100 K.

In some example embodiments, a controller can adjust lumen output automatically to maintain constant delivered lumens across multiple color temperatures or to suit application requirements. The controller implements the adjustment utilizing
20 programmable driver current and/or via turning on and off various groups of light emitting diodes. Configurable color temperature or lumen output can function in combination with integral dimming, for example to facilitate interface with building automation, sensors, and dimmers.

In some example embodiments, luminaires can achieve an additional level of
25 flexible configuration at a distribution center using interchangeable optics. For example, primary optics can provide medium distribution (e.g. spacing criteria equals 1.0), while a diffuser or concentrator lens can be used to achieve wide distribution (e.g. spacing criteria equals 1.4), and narrow distribution (e.g. spacing criteria equals 0.4).

In some example embodiments, a luminaire's configuration of delivered lumens
30 and color temperatures can be set at the factory, at distribution, or in the field. To meet

current and emerging code compliance, performance markings on a luminaire can indicate and correspond to the desired setting. Economical, field-installed nameplates can identify the various electrical and optical performance ratings and, when installed, permanently program the delivered lumens and color temperature. Other settings, such as
5 dimming protocols, can likewise be configured. The interface between the nameplate and internal logic can use mechanical, electrical or optical means, for example.

Accordingly, in some embodiments of the disclosure, the technology provides product markings and supports regulatory compliance. For example, nameplates can indicate energy codes and rebate opportunities, for compliance with product labeling and
10 to facilitate compliance confirmation by local authorities who may have jurisdiction.

Some representative embodiments will be further described hereinafter with example reference to the accompanying drawings that describe representative embodiments of the present technology. In the drawings, Figure 1 illustrates views of a representative luminaire 100; Figure 2 illustrates a functional block diagram of a
15 representative circuit 200 that the luminaire 100 can comprise; Figure 3 illustrates a representative state table for the circuit 200; and Figure 4 illustrates a representative schematic for the circuit 200. The technology may, however, be embodied in many different forms and should not be construed as limited to the embodiments set forth herein; rather, these embodiments are provided so that this disclosure will be thorough
20 and complete, and will fully convey the scope of the technology to those appropriately skilled in the art.

Referring now to Figure 1, multiple views of the luminaire 100 are shown. Figure 1A illustrates a side perspective view of the luminaire 100. Figure 1B illustrates a top perspective view of the luminaire 100. Figure 1C illustrates a view of the light-emitting bottom of the luminaire 100, showing a lens 120 in a light-emitting aperture 115 of the
25 luminaire 100. Figure 1D illustrates a view of the light-emitting bottom of the luminaire 100 with the lens 120 removed from the light-emitting aperture 115 of the luminaire. Figure 1E illustrates a view of the light-emitting bottom of the luminaire 100 with the lens 120 and an associated reflector 130 removed from the light-emitting aperture 115 of
30 the luminaire. Figure 1F illustrates a cutaway perspective view of the luminaire 100.

Figure 1G illustrates another cutaway perspective view of the luminaire 100. Figure 1H illustrates another cutaway view of the luminaire 100. Figures 1I, 1J, and 1K provide detailed views of a portion of the luminaire 100 comprising a cover 126 and an associated access aperture 129 for providing internal access to the luminaire 100. In Figure 1I, the cover 126 is fully removed. In Figure 1J, the cover 126 is positioned adjacent the access aperture 129, for example in connection with attachment or removal of the cover 126. In Figure 1K, the cover 126 is attached to the luminaire 100.

As best seen in the views of Figures 1A and 1B, the illustrated example luminaire 100 is suited for inserting in an aperture in a ceiling to provide overhead lighting. In this example embodiment, the luminaire 100 can be characterized as an overhead light or a recessed ceiling light. Various other indoor and outdoor luminaires that may be mounted in a wide range of orientations can be substituted for the luminaire 100 illustrated in Figure 1.

The illustrated example luminaire 100 of Figure 1 comprises a housing 105 that is circular with a protruding rim 110 that extends circumferentially about the housing 105. When the luminaire 100 is installed in a ceiling aperture, the rim 100 circumscribes and covers the edge of the ceiling aperture for aesthetics, for support, and for blocking of debris from above the ceiling. Hanger clips 102 hold the luminaire 100 in place in installation.

As best illustrated in Figures 1I, 1J, and 1K, the example luminaire 100 comprises an access aperture 129 and an associated cover 126. The access aperture 129 provides access to the interior of the luminaire housing 105, for example in the field and/or during luminaire installation. An installer can remove the cover 126 and manually set a dual inline pin (DIP) switch 131 to configure the luminaire 100 for long-term operation providing illumination with a selected color temperature, a selected lumen output, and/or a selected photometric distribution. As illustrated, the dual inline pin switch 131 is mounted on a circuit board adjacent the access aperture 129, thereby facilitating convenient and efficient access in the field or at a distribution center, for example.

An electrical cable 127 extends through a wiring aperture 103 in the cover 126. The electrical cable 127 terminates in a plug 132 that mates with a receptacle 133 that is

mounted inside the housing 105 adjacent the access aperture 129 for convenient field access.

As illustrated, the example cover 126 comprises two notches 123, 124 that each receives a respective screw 128 for holding the cover 126 in place. The notch 123 is disposed on the right side of the cover 126 and is sized to receive one of the screws 128. Meanwhile, the notch 124 is disposed on a left side of the cover 126 and is sized to receive the other screw 128.

The left notch 124 and the right notch 123 are oriented so that the cover 126 is rotatable about the right screw 128 when the right screw 128 is loosely disposed in the right notch 123. In other words, cover rotation can occur when the right screw 128 is in the right notch 123 with threads engaged but prior to tightening. In this position, the cover 126 can rotate clockwise about the right screw 128. Thus, the right screw 128 provides an axis of rotation for the cover 126. This clockwise rotation facilitates convenient manipulation of the cover 126 by a person working the cover 126 to cover the access aperture 129, with the screws 128 engaged but not fully tightened. The clockwise rotation of the cover 126 about the right screw 128 provides the person with a capability to slide the left notch 124 of the cover 126 conveniently under the head of the left screw 128. Once the cover 126 is rotated so the left notch 124 is under the head of the left screw 128, the person (for example an installer) can tighten the two screws 128 to secure the cover 126.

To remove the cover 126, the person loosens the two screws 128 and then rotates the cover 126 counterclockwise about the right screw 128 so that the left notch 124 moves out from under the head of the left screw 128. Once the left notch 124 is free from the left screw 128, the installer can pull the right notch 123 out from under the right screw 128 to fully remove the cover 126.

As best seen in the views of Figures 1A, 1C, 1F, and 1G, the lens 120 of the luminaire 100 is positioned adjacent the lower, exit side of the light-emitting aperture 115. As illustrated, the lens 120 can mix and blend light emitted by two groups of light emitting diodes 150, 155, with each group having a different color temperature. In some embodiments, the two groups of light emitting diodes 150, 155 may have color

temperatures that differ by at least 500 Kelvin, for example. The group of light emitting diodes 150 can be characterized as one light emitting diode light source, while the group of light emitting diodes 155 can be characterized as another light emitting diode light source. Other embodiments of a light emitting diode light source may have a single light emitting diode or more light emitting diodes than the embodiment illustrated in Figure 1. A reflector 130 is disposed in and lines the aperture 115 to guide and manage the emitted light between the light emitting diodes 150, 155 and the lens 120. In some embodiments, an upper lens (not illustrated) replaces the reflector 130.

The light emitting diodes 150, 155 are mounted on a substrate 125, for example a circuit board, and form part of a circuit 200. In the illustrated embodiment, the light emitting diodes 150, 155 are interspersed. In other embodiments, the light emitting diodes 150, 155 may be separated from one another or spatially segregated according to color temperature or other appropriate parameter. As discussed in further detail below, the circuit 200 supplies electricity to the light emitting diodes 150, 155 with a level of flexibility that facilitates multiple configurations suited to different applications and installation parameters.

Turning to Figures 2, 3, and 4, some example embodiments of the circuit 200 will be discussed in further detail with example reference to the luminaire 100. The circuit 200 can be applied to other indoor and outdoor luminaires.

Referring now to Figure 2, this figure illustrates an embodiment of the circuit 200 in an example block diagram form. The circuit 200 comprises a DC power supply 205 for supplying electrical energy that the circuit 200 delivers to the light emitting diodes 150, 155. In an example embodiment, the circuit 200 comprises a light emitting diode driver.

The dual inline pin switch 131 comprises individual switches 210 that provide an input for configuring the luminaire 100 to operate at a selected color temperature. In the illustrated embodiment, the circuit 200 comprises two manual switches 210. Other embodiments may have fewer or more switches 210. In various embodiments, the switches 210 can be mounted to the housing 105 of the luminaire 100, for example within the housing 105 (as illustrated in Figure 1 and discussed above) or on an exterior surface

of the housing 105. In some embodiments, the switches 210 are mounted on the substrate 125. In some embodiments, the switches 210 are implemented via firmware or may be solid state.

As an alternative to the illustrated dual inline pin switch 131, the input can
5 comprise multiple DIP switches, one or more single in-line pin packages (SIP or SIPP), one or more rocker switches, one or more reed switches, one or more magnetic switches, one or more rotary switches, one or more rotary dials, one or more selectors or selector switches, one or more slide switches, one or more snap switches, one or more thumbwheels, one or more toggles or toggle switches, one or more keys or keypads, or
10 or one or more buttons or pushbuttons, to mention a few representative examples without limitation.

As further discussed below, a controller 215 operates the light emitting diodes 150, 155 according to state of the switches 210. In some example embodiments, the controller 215 comprises logic implemented in digital circuitry, for example discrete
15 digital components or integrated circuitry. In some example embodiments, the controller 215 utilizes microprocessor-implemented logic with instructions stored in firmware or other static or non-transitory memory.

In the illustrated embodiment, the outputs of the controller 215 are connected to two MOSFET transistors 160 to control electrical flow through two light emitting diodes
20 150, 155. The illustrated MOSFET transistors 160 provide one example and can be replaced with other appropriate current control devices or circuits in various embodiments. The switches 210 thus configure the luminaire 100 to operate with either or both of the light emitting diodes 150, 155. The light emitting diodes 150, 155 illustrated in Figure 2 may represent two single light emitting diodes or two groups of
25 light emitting diodes, for example.

Figure 3 illustrates a representative table 300 describing operation of the circuit 100 according to some example embodiments. In the example of Figure 3, the light emitting diode 150 produces light having a color temperature of 3,000 Kelvin, and the light emitting diode 155 produces light having a color temperature of 4,000 Kelvin.

As shown in the example table 300, when both of the switches 210 are in the on state, the controller 215 causes the light emitting diode 155 to be off and the light emitting diode 150 to be on. Accordingly, the luminaire 100 emits illumination having a color temperature of 3,000 Kelvin.

5 When both of the switches 210 are in the off state, the controller 215 causes the light emitting diode 155 to be on and the light emitting diode 150 to be off. Accordingly, the luminaire 100 emits illumination having a color temperature of 4,000 Kelvin.

 When one of the switches 210 is in the off state and the other of the switches 210 is on the on state, the controller 215 causes the light emitting diode 155 to be on and the
10 light emitting diode 150 to be on. The luminaire 100 thus emits illumination having a color temperature of 3,500 Kelvin. In some other example embodiments, the controller 215 can adjust the light output of one or both of the light emitting diodes 150, 155 to set the color temperature to a specific value with the range of 3,000 to 4,000 Kelvin.

 Accordingly, the controller 215 maps the four configurations of the two switches
15 210 to three states for configuring the two light emitting diodes 150, 155 for permanent or long-term operation. Mapping two switch configurations to a single mode of long-term operation can simplify configuration instructions and reduce errors during field configuration. The resulting configurations support multiple color temperatures of illumination from a single luminaire 100.

20 Some example embodiments support fewer or more than three states of illumination. For example, in one embodiment, the luminaire 100 comprises three strings of light emitting diodes 150 that have different color temperatures, such as 3,000 Kelvin, 2,700 Kelvin, and 4,000 Kelvin. In this example, in addition to the states illustrated in Figure 3 and discussed above, the switching logic can support a fourth state in which only
25 the 2,700 Kelvin string is on.

 Figure 4 illustrates a schematic of an example embodiment of the circuit 200. The schematic of Figure 4 provides one example implementation of the block diagram illustrated in Figure 3.

 As illustrated in Figure 4 in schematic form, the circuit 200 conforms to the
30 foregoing discussion of the block diagram format of Figure 3. In Figure 4, the light

emitting diodes 150, 155 of Figure 3 are respectively represented with groups of light emitting diodes 150, 155. Additionally, the schematic details include a thermal protective switch 305 for guarding against overheating. Figure 4 thus provides one example schematic for an embodiment of the electrical system of the luminaire 100
5 illustrated in Figure 1 and discussed above.

ABSTRACT OF THE DISCLOSURE

A system can configure a luminaire for providing illumination of a selected color temperature, a selected lumen output, or a selected photometric distribution. The luminaire can comprise at least two light sources that have different illumination characteristics, for example different color temperatures, different lumen outputs, or different photometric distributions. The system can configure the luminaire to operate a first of the two light sources, a second of the two light sources, or both of the light sources based on an input. When the luminaire is configured to operate both of the light sources, the luminaire can produce illumination having a color temperature, a lumen output, or a photometric distribution that is different than either of the two light sources.

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

DETAILED ACTION

This Office Action is in response to the Applicant's communication filed on 11/13/2017.

In virtue of the communication:

Claims 1-20 are pending in the instant application.

The references cited in the Information Disclosure Statement (IDS) filed on 01/04/2018 and 02/05/2018 have been considered by the examiner.

The present application, filed on or after March 16, 2013, is being examined under the first inventor to file provisions of the AIA.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on nonstatutory double patenting

provided the reference application or patent either is shown to be commonly owned with the examined application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement. See MPEP § 717.02 for applications subject to examination under the first inventor to file provisions of the AIA as explained in MPEP § 2159. See MPEP §§ 706.02(l)(1) - 706.02(l)(3) for applications not subject to examination under the first inventor to file provisions of the AIA. A terminal disclaimer must be signed in compliance with 37 CFR 1.321(b).

The USPTO Internet website contains terminal disclaimer forms which may be used. Please visit www.uspto.gov/patent/patents-forms. The filing date of the application in which the form is filed determines what form (e.g., PTO/SB/25, PTO/SB/26, PTO/AIA/25, or PTO/AIA/26) should be used. A web-based eTerminal Disclaimer may be filled out completely online using web-screens. An eTerminal Disclaimer that meets all requirements is auto-processed and approved immediately upon submission. For more information about eTerminal Disclaimers, refer to www.uspto.gov/patents/process/file/efs/guidance/eTD-info-I.jsp.

Claims **16-20** are rejected on the ground of nonstatutory double patenting as being unpatentable over claims 16-20 of U.S. Patent No. 9,820,350 B2. Although the claims at issue are not identical, they are not patentably distinct from each other because claims 16-20 of U.S. Patent '350 discloses the limitations such as a housing, first and second light source, one or more switches, and first, second and third operating configurations, etc., and other combinations thereof as recited in claims 16-20 of the instant application.

Allowable Subject Matter

Claims **1-15** are allowed.

The primary reasons for the allowance of the claims are in the inclusion of the limitation(s):

“... a controller connected to the at least one input, the first light source, and the second light source, the controller configured to: power the first light source when the at least one input is in the first state; and power the first light source and the second light source when the at least one input is in the second state” and combination thereof, in the claim(s), i.e., claim 1, (claims 2-10 are allowed as being dependent on claim 1),

“... a controller coupled to the at least one input, the first light source, the second light source, and the third light source, the controller configured to: power the first light source and the second light source when the at least one input is in a first state; and power the first light source and a third light source when the at least one input is in a second state” and combination thereof, in the claim(s), i.e., claim 11 (claims 12-15 are allowed as being dependent on claim 11), which are not found in the prior art references.

REMARKS

In the Office Action, the Examiner indicates that claims 1-15 are allowed and that claims 16-20 are subject to a non-statutory double patenting rejection. Applicant thanks the Examiner for indicating that claims 1-15 are allowed.

Non-statutory Double Patenting Rejections

Pending claims 16-20 are rejected on the ground of non-statutory double patenting as allegedly being unpatentable over the claims of U.S. Patent No. 9,820,350. Without acquiescing to or agreeing with the Examiner's rejections and comments, and solely to advance the application in the U.S. Patent and Trademark Office, Applicant submits herewith a terminal disclaimer with respect to the above-noted patent which is commonly owned by the assignee.

The required fee for filing a terminal disclaimer also accompanies this response. Accordingly, withdrawal of the non-statutory obviousness type double patenting rejection is respectfully requested.

CONCLUSION

The foregoing is submitted as a full and complete response to the Action. Applicant submits that the application is now in condition for allowance and such action is hereby courteously solicited. If the Examiner believes that there are any issues that can be resolved by a telephone conference, or that there are any informalities that can be corrected by an Examiner's amendment, a telephone call to the undersigned at 404-572-3505 to discuss the same is respectfully requested.

Respectfully submitted,

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

一种发光二极管可控色温室内节能灯

技术领域：

[0001] 本实用新型属于一种照明器材，特别涉及一种发光二极管可控色温室内节能灯。

背景技术：

[0002] 在不同地区范围内，由于各地区所处的地域差异、气候差异，使得各地区人群对不同照明效果表现出来的舒适度有很大差别。而且就同一地区而言，因为季节、气候的变化，对同一种色温灯具所表现出来的舒适度也会有很大差异，这种差异在室内照明上表现的尤为突出。而传统灯具受技术和工艺上的限制，很难满足不同人群对灯光色温的要求。

发明内容：

[0003] 本实用新型的目的就在于克服上述现有技术中存在的不足，而提供一种发光二极管可控色温室内节能灯，该节能灯节能环保、色温可控，并且低耗高效。

[0004] 如上构思，本实用新型的技术方案是：一种发光二极管可控色温室内节能灯，其特征在于：由玻璃外壳、色温选择开关、控制器、接口、散热体和 LED 光源组成；玻璃外壳位于散热体的上面，散热体通过连接件与接口连接，色温选择开关嵌入于散热体的上面，散热体内部放置控制器、散热体顶部放置铝基板，铝基板上放置多颗多色温的高光效 LED 芯片。

[0005] 上述接口采用螺旋式、直插式、挤压式。

[0006] 上述多颗多色温的高光效 LED 芯片分为两条链路分别由色温选择开关控制，一条是由暖白色 LED 灯串联组成，一条是由冷白色 LED 灯串联或并联组成。

[0007] 上述玻璃外壳的表面有凹凸。

[0008] 上述控制器的主控电路包括整流滤波电路、电源管理芯片、变压器和开关三极管，其中，前端整流滤波电路的输出端与变压器的初级连接，变压器初级的输出端与开关三极管的集电极连接、开关三极管的基极与电源管理芯片的输入端口连接、电源管理芯片的输出信号经过变压产生高频脉冲交流，并经变压器次级整流滤波后输出稳定的直流电压。

[0009] 本实用新型具有如下的优点和积极效果：

[0010] 1、通过散热体用来驱散 LED 灯珠铝基板封装所散发出的热量，从而延长了整个 LED 灯泡灯的使用寿命。

[0011] 2、通过控制器来控制 and 保证整个电路的正常运行，从而可保证节能灯工作的稳定性和安全性。

[0012] 3、玻璃外壳的表面凹凸不平，可以有效的防止眩光。

附图说明：

[0013] 图 1 是本实用新型的外观图。

[0014] 图 2 是本实用新型的内部结构示意图。

[0015] 图 3 是图 2 的 A-A 剖面图。

[0016] 图 4 是控制器的电原理图。

具体实施方式：

[0017] 如图 1、2、3 所示：一种发光二极管可控色温室内节能灯，由玻璃外壳 1、色温选择开关 2、控制器 3、接口 4、铝制散热体 5 和 LED 光源 6 组成。接口 4 位于可控色温 LED 节能灯的最底部，可选用螺旋式、直插式、挤压式等多种方式，用来与外部接口中的电极相连接通电。铝制散热体 5 采用金属材质铝压铸制成，通过塑料连接件 7 与接口 4 连接，色温选择开关 2 嵌入于铝制散热体 5 的上面，铝制散热体 5 内部放置控制器 3、铝制散热体 5 顶部放置铝基板 8，六颗不同色温的多颗高光效 LED 芯片（发光二极管）位于铝基板 8 的上面，铝基板 8 热传导快，具有很好的散热效果。上述六颗多色温的高光效 LED 芯片分为两条链路分别由色温选择开关控制，一条是由暖白色 LED 灯串联组成，一条是由冷白色 LED 灯串联或并联组成。

[0018] 上述铝制散热体 5 用来驱散 LED 灯珠铝基板 8 所散发出的热量，保证整个 LED 球泡灯的使用寿命。控制器 3 用来控制和保证整个电路的正常运行。玻璃外壳 1 位于铝制散热体 5 的上面，用来保护发光装置并把发出的可见光散发出去，玻璃外壳 1 的模具在加工的时候，对玻璃外壳 1 的塑料模具采用高速铣加工，使玻璃外壳 1 光滑的表面变得不光滑有凹凸感，可以有效的防止眩光。导线 9 位于灯具的里面，用来把各种器件有序的连接起来，保证 LED 球泡灯接通电源后，可以正常的工作。

[0019] 如图 4 所示，本实用新型控制器的主控电路通过对不同色温的 LED 选择性通断，得到不同的色温值，采用电源管理芯片实现的恒流控制电路，其产生相应的电流值特别适用于驱动 LED 灯。本发明主控电路围绕电源管理芯片进行设计，其通过前端整流滤波、送往变压器初级，经开关三极管、电源管理芯片、变压等的开关导通，产生高频脉冲交流，经变压器次级整流滤波后输出稳定的直流电压。

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

The Paperwork Reduction Act (PRA) of 1995 requires Federal agencies to obtain Office of Management and Budget approval before requesting most types of information from the public. When OMB approves an agency request to collect information from the public, OMB (i) provides a valid OMB Control Number and expiration date for the agency to display on the instrument that will be used to collect the information and (ii) requires the agency to inform the public about the OMB Control Number's legal significance in accordance with 5 CFR 1320.5(b).

The information collected by PTOL-85 Part B is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 30 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case.
