Need something to make today's wait for your new iPhone easier? Watching the crew at iFixit [go at a brand new iPhone 6 Plus](#) with their screwdrivers, spudgers and iSlacks probably won't help, but at least it will pass the time. They're in the middle of pulling Apple's XL-sized phone apart, and while there's not a lot new to report (it's a phone, and

it has 1GB of RAM) the pics are always entertaining. The 6 Plus' 5.5-inch display also leaves room for a larger battery, and now we know that it's a 2915 mAh unit. That's about twice the size of the one in the iPhone 5s, slightly bigger than the battery in the Galaxy S 5, but smaller than the swappable 3,220mAh unit slotted inside the 5.7-inch [Galaxy Note 4](#).
