Our Notarization Process

OnlineNotary.net is a Virginia Based Notarization firm. Following document has been notarized by us. The Commonwealth of Virginia signed into law SB 827 and HB 2318. These bills authorize and allow for approved, certified Virginia Notaries to legally notarize any signature within any US State by using audio-video capturing technology. We use highest standard Personal Identity Validation, UETA and E-SIGN ACT during our notarization process and have fully vetted signers in this document. We also keep video recordings of each notarization in an event if needed by court of law. You may also scan the QR code on the right to validate this document instantly.

**SAP AMERICA, INC.
EXHIBIT 1044**

AFFIDAVIT OF NATHANIEL E FRANK-WHITE

1. I am a Records Request Processor at the Internet Archive. I make this declaration of my own personal knowledge.
2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.
3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to browse more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a display of available dates. The visitor may select one of those dates, and begin browsing an archived version of the Web. Links on archived files in the Wayback Machine point to other archived files (whether HTML pages or other file types), if any are found for the URL indicated by a given link. For instance, the Wayback Machine is designed such that when a visitor clicks on a hyperlink on an archived page that points to another URL, the visitor will be served the archived file found for the hyperlink's URL with the closest available date to the initial file containing the hyperlink.
4. The archived data made viewable and browsable by the Wayback Machine is obtained by use of web archiving software that automatically stores copies of files available via the Internet, each file preserved as it existed at a particular point in time.
5. The Internet Archive assigns a URL on its site to the archived files in the format `http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL]` aka an "extended URL". Thus, the extended URL `http://web.archive.org/web/19970126045828/http://www.archive.org/` would be the URL for the record of the Internet Archive home page HTML file (`http://www.archive.org/`) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). The date indicated by an extended URL applies to a preserved instance of a file for a given URL, but not necessarily to any other files linked therein. Thus, in the case of a page constituted by a primary HTML file and other separate files (e.g., files with images, audio, multimedia, design elements, or other embedded content) linked within that primary HTML file, the primary HTML file and the other files will each have their own respective extended URLs and may not have been archived on the same dates.
6. Attached hereto as Exhibit A are true and accurate copies of browser screenshots of the Internet Archive's records of the archived files for the URLs and the dates specified in the attached coversheet of each printout.

7. I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct.

Abstract

This IBM Redbook provides system administrators, developers, and architects with the knowledge to configure a WebSphere Application Server V6 runtime environment, to package and deploy Web applications, and to perform ongoing management of the WebSphere environment.

One in a series of handbooks, the entire series is designed to give you in-depth information about the entire range of WebSphere Application Server products. In this book, we provide a detailed exploration of the WebSphere Application Server V6 runtime environments and administration process.

Table of Contents

Part 1. The basics

Chapter 1. WebSphere Application Server V6 for distributed platforms

Chapter 2. WebSphere Application Server V6 architecture

Chapter 3. System management: A technical overview

Chapter 4. Getting started with profiles

Chapter 5. Administration basics

Chapter 6. Administration with scripting

Chapter 7. Configuring WebSphere resources

Chapter 8. Managing Web servers

Chapter 9. Problem determination

Part 2. Messaging with WebSphere

Chapter 10. Asynchronous messaging

Chapter 11. Default messaging provider

Part 3. Working with applications

Chapter 12. Session management

Chapter 13. WebSphere naming implementation

Chapter 14. Understanding class loaders

Chapter 15. Packaging applications

Chapter 16. Deploying applications

Chapter 17. WebSphere Rapid Deployment
