

IN CAMERA SENSOR AND SOFTWARE STABILIZATION — Awarded to GoPro and Socionext

socionext™

Since the inception and development of this action camera EIS technology in 2015, over 70 programs and hundreds of episodes incorporating this technology into network finished content. The technology has created the ability for camera operators and producers to obtain stabilized action footage when a subject is rapidly moving easily and economically in unstable situations. For the television consumer, new viewing experiences around action segments are now more prevalent in daily viewing and play a much larger role in everyday consumption. Television consumers are now able to get a first-hand viewing experience exactly as the eye sees it from the action participants in a variety of different sporting and adventure situations. This type of videography was not easily accomplished prior to the advent of this technology. of this is a consumer device with software, not hardware stabilization. Incredibly accurate and cheap and you can mount it on a Mountain Bike, or a Drone and get great footage.
