Subject: Conquest Software Review

All,

We conducted an ad hoc multi-hour review of our handset today and the verdict is... the software user experience is remarkable! It is simply more powerful than any alternative. Btw, we only had to reboot the handset three times during an intensive multi-hour session, so the reliability is rising to a more than credible level for a pre-alpha device.

A ton of work remains, but it is pleasing to see the Visual Multitasking model come together in fine shape. Soon everyone will have EV2 units to evaluate our user experience (and find all the remaining holes in the system design).

Factory is entering higher volume EV2 builds tomorrow. Let's keep delivering...
