CrowdStrike Falcon Platform

Real-time Detection and Attribution of Targeted Attacks

CrowdStrike Falcon is a Big Data Active Defense platform focused on raising the adversaries' costs and giving the strategic advantage back to defenders. Designed to continuously monitor, share, and mitigate the adversary's Tactics, Techniques, and Procedures (TTPs), CrowdStrike Falcon provides unmatched real-time detection, attribution, flexible range of response actions, and intelligence dissemination capabilities.

- Detects zero-day threats and prevents damage from targeted attacks
- Identifies malware and provides attribution of the attackers
- Provides a flexible range of responses to raise the cost and risk to the adversary
- Shares information across an entire community of like-minded trusted defenders
- Leverages a cloud based platform and a global network of event driven security sensors

CrowdStrike Cloud

A key component of the CrowdStrike platform is our redundant and highly scalable and secure cloud architecture that correlates intelligence and security events in real-time from our global network of sensors and provides unprecedented level of insight into adversary activities and business impact from their attacks. Storing vast amount of event data in a scalable elastic cloud allows us to pinpoint targeted attacks in real-time. This massive intelligence repository is constantly mined, and advanced analytics are used to reveal insights that have escaped existing solutions. Through its algorithmic approach to identify adversary behavior, CrowdStrike is pioneering the science of security.

Applications

Falcon Host: Cloud-managed host-based adversary detection application

Falcon Intelligence: Cutting-edge cyber threat intelligence application

Falcon DNS: Geographically distributed threat mitigation application

Falcon Email: Email protection application

Benefits

- Identify and protect against damage from determined attackers who are undetected by existing passive defense solutions
- Understand who is attacking you, why and what they want to steal or damage
- Share and receive real-time intelligence on attacks relevant to your industries and sectors
