Report of Basic Science Research/Grant Funding

2001-06 **Project:** Stem Cell Induced Restoration of Myocardial Microstructure in a Canine Model

Major Project Goal: This grant provided funding for the development of a new large animal model for the investigation of stem cell induced myocardial regeneration. The project main goal was the establishment of a model to assess functional improvement in cardiac function by serial Cardiac MRI following autologous stem cell injection therapy in a chronic infarct model.

Organization: Richard L. Varco Surgical Research Fellowship

Grant Type: Research Fellowship

Co-Principal Investigators: Dr. Robert Gallegos, Dr. R. Morton Bolman III

Date: 2001-02

Organization: Lillehei Heart Institute

Grant Type: Research Fellowship Award
Co-Principal Investigators: Dr. Robert Gallegos, Dr. R. Morton Bolman III
Date: 2001-02

Project: Stem Cell Induced Restoration of Myocardial Microstructure, Canine Model
Organization: Richard L. Varco Surgical Research Fellowship Stem Cell Induced
Grant Type: Grant Award Renewal
Co-Principal Investigators: Dr. Robert Gallegos, Dr. R. Morton Bolman III
Date: 2002-04

Project: Stem Cell Induced Restoration of Myocardial Microstructure, Canine Model
Organization: Minnesota Medical Foundation
Grant Type: Equipment Grant
Co-Principal Investigators: Dr. Robert Gallegos, Dr. R. Morton Bolman III, Richard Bian
Date: 2003-04

200 **Project:** Stem Cell Induced Regeneration of Myocardium
8-11 **Organization:** Brigham and Women's Hospital, Department of Surgery
Grant Type: New Faculty Career Development Award
Principal Investigator: Dr. Robert Gallegos

Major Project Goal: This project is designed to further previous work completed by my laboratory in the area of stem cell myocardial regeneration. The goal is to utilize bioengineered peptides as scaffold for growth factors and cells in the effort to increase cell engraftment and hence further enhance the treatment effect.

2009-11 **Project:** Stem Cell Induced Regeneration of Myocardium
Organization: Brigham and Women's Hospital, Children's Hospital Boston, Harvard School of Public Health, Beth Israel Deaconess, Dana Farber Cancer Institute
Grant Type: Harvard Catalyst Award
Principal Investigator: Susan M. Dallabrida, PhD, Maria A. Rupnick, MD, PhD, Renee Dickie, PhD, Robert P. Gallegos, MD, PhD, Giannoula Klement, MD, Ronglih Liao, PhD, Shou Ching Shih, PhD, David Zurakowski, PhD

Major Project Goal: The primary goal of this project is to determine if angiopoietin-1 (ang1 for short) can be used as a novel cardioprotective agent against ischemia-reperfusion injury.

200 **Project:** Cardiovascular Tissue Bank and Cardiac Progenitor Cells from Patients
9-11 Undergoing Cardiac Surgery
Organization: Watkin's Discovery Grant
PI: Robert Gallegos
Advisors: Michael Pfeffer, Piero Anversa, R. Morton Bolman

Major Project Goal: The primary goal of this project is to establish an IRB approved cardiovascular tissue bank for all patients undergoing cardiac surgery. Once patients consent, tissue, blood, and relevant patient information will be collected to allow for the determination of positive and negative predictors for the presence of adequate cardiac progenitor cells within the acquired samples.

2009- **Project:** Cardiac Regeneration Team
11 **Organization:** NIH Cardiac Translational Implementation Program
Co-PI: Michael Pfeffer, Piero Anversa, Robert Gallegos, et.al.

Major Project Goal: This is an interdepartmental team established to bring forth a human cardiac stem cell clinical trial for regeneration of myocardium in LVAD and transplant patients. The study involves three major project goals. First, identification of cardiac progenitor stem cells in end stage heart failure patients. Secondly, to establish a large animal model of the disease process for translational research. Finally, develop weaning parameters to identify LVAD patients who would best be candidates for stem cell therapy.

2023-11 **Project:** ECMO Heart Failure Team
Organization: Helmsley Foundation
Co-PI: Robert Gallegos, et.al.

Major Project Goal: This interdepartmental team is focused on improving the delivery of acute heart failure treatment to Nebraska. The aim of the project is to improve ECMO capabilities to support ECPR and MCS services. Total grant award \$2.6 M.

2024- **Project:** CT-1000
Organization: Corcym
Research Group
Co-PI: Robert Gallegos, et.al.

Major Project Goal: This multisite research protocol is a perspective study to determine accuracy of CT sizing using 3-Mensio for the Perceval sutureless aortic valve prosthesis. Accuracy in sizing and hemodynamic assessment are the primary focus.
