VI. SUMMARY OF OPINIONS 31

I. INTRODUCTION

1. My name is Sylvia D. Hall-Ellis. I have been retained as an expert by Winston & Strawn.

2. I have written this report at the request of Winston & Strawn to provide my expert opinion regarding the authenticity and public availability of two journal publications. My report sets forth my opinions in detail and provides the basis for my opinions regarding the public availability of these publications.

3. I reserve the right to supplement or amend my opinions, and bases for them, in response any additional evidence, testimony, discovery, argument, and/or other additional information that may be provided to me after the date of this report.

4. I am being compensated for my time spent working on this matter at my normal consulting rate of $400 per hour, plus reimbursement for any additional reasonable expenses. My compensation is not in any way tied to the content of this report, the substance of my opinions, or the outcome of this litigation. I have no other interests in this proceeding or with any of the parties.

5. All of the materials that I considered are discussed explicitly in this declaration.

II. QUALIFICATIONS

6. I am currently an Adjunct Professor in the School of Information at San José State University. I obtained a Master of Library Science from the University of North Texas in 1972 and a Ph.D. in Library and Information Science from the University of Pittsburgh in 1985. Over the last fifty years, I have held various positions in the field of library and information resources. I was first employed as a librarian in 1966 and have been involved in the field of library sciences since, holding numerous positions.

7. I am a member of the American Library Association (ALA) and its Association for Library Collections & Technical Services (ALCTS) Division, and I served on the Committee on Cataloging: Resource and Description (which wrote the new cataloging rules) and as the chair of the Committee for Education and Training of Catalogers and the Competencies and Education for a Career in Cataloging Interest Group. I also served as the Chair of the ALCTS Division's Task Force on Competencies and Education for a Career in Cataloging. Additionally, I have served as the Chair for the ALA Office of Diversity's Committee on Diversity, as a member of the national Board of Directors for REFORMA, as a member of the Editorial Board for the ALCTS premier cataloging journal, *Library Resources and Technical Services,* as a Co-Chair for the Library Research Round Table (LRRT) of ALA, and

a member of the LRRT Nominating Committee. Currently I serve as a member of the CORE Margaret Mann Citation Committee.

8. I have also given over one hundred presentations in the field, including several related to library cataloging systems and Machine-Readable Cataloging ("MARC") standards. My current research interests include library cataloging systems, metadata, and organization of electronic resources.

9. My full curriculum vitae is attached hereto as Attachment 1 to this report.

III. PRELIMINARIES

A. Scope of Declaration and Legal Standards

10. I am not an attorney and will not offer opinions on the law. I am, however, rendering my expert opinion on the authenticity of the documents referenced herein and when and how each of these documents was disseminated or otherwise made available to the extent that persons interested and ordinarily skilled in the subject matter or art, exercising reasonable diligence, could have located the documents before February 27, 2007.

11. I am informed by counsel that a printed publication qualifies as publicly accessible as of the date it was disseminated or otherwise made available such that a person interested in and ordinarily skilled in the relevant subject matter could locate it through the exercise of ordinary diligence.

12. While I understand that the determination of public accessibility under the foregoing standard rests on a case-by-case analysis of the facts particular to an individual publication, I also understand that a printed publication is rendered "publicly accessible" if it is cataloged and indexed by a library such that a person interested in the relevant subject matter could locate it exercising reasonable diligence (*i.e.*, I understand that cataloging and indexing by a library in a manner that permits a person of ordinary skill in the relevant subject matter to locate the publication is sufficient, though there are other ways that a printed publication may qualify as publicly accessible). One manner of sufficient indexing is indexing according to subject matter category. I understand that the cataloging and indexing by a single library of a single instance of a particular printed publication is sufficient, even if the single library is in a foreign country. I understand that, even if access to a library is restricted, a printed publication that has been cataloged and indexed therein is publicly accessible so long as a presumption is raised that the portion of the public concerned with the relevant subject matter would know of the printed publication. I also understand that the cataloging and indexing of information that would guide a person interested in the relevant subject matter to the printed publication, such as the cataloging and indexing of an abstract for the printed publication, is sufficient to render the printed publication publicly accessible.

13. I understand that routine business practices, such as general library

cataloging and indexing practices, can be used to establish an approximate date on which a printed publication became publicly accessible.

B. Persons of Ordinary Skill in the Art

14. I am told by counsel that the subject matter of this proceeding relates generally to a catheter device (and method of using the device) for assisting blood flow in the heart.

15. I have been informed by counsel that a "person of ordinary skill in the art at the time of the invention" (POSITA) is a hypothetical person who is presumed to be familiar with the relevant field and its literature at the time of the inventions. This hypothetical person is also a person of ordinary creativity, capable of understanding the scientific principles applicable to the pertinent field.

16. I am told by counsel that persons of ordinary skill in this subject matter or art would have had: a) at least a bachelor's degree in engineering; b) knowledge and experience in the anatomy and physiology of the human circulatory system; and c) at least five years of experience in design and development of implantable medical devices.

17. It is my opinion that such a person would have been engaged in research, learning through study and practice in the field and possibly through formal instruction the bibliographic resources relevant to his or her research. Before February 27, 2007, such a person would have had access to a vast array of long-

established print resources concerning devices (and methods of using the devices) for assisting blood flow in a heart, including catheter devices and left-ventricular assist devices (LVADs), as well as to a rich set of online resources providing indexing information, abstracts, and full text services for development of both balloon catheter and LVAD systems and methods.

18. Based on my experience working in research libraries with researchers having the qualifications described above, or even lesser qualifications, it is my opinion that such researchers would have been able to locate the material discussed herein on their own or with the assistance of a research librarian with relative ease using the tools and resources described herein.

IV. LIBRARY CATALOGING PRACTICES

19. In preparing this declaration, I used authoritative databases, such as the OCLC bibliographic database, the Library of Congress Online Catalog, and the Library of Congress Subject Authorities, to confirm citation details of the various publications discussed. Unless I note otherwise below in reference to a specific serial publication, it is my expert opinion that this standard protocol was followed for the serial publication discussed below.

20. Based on my experience working in research libraries with researchers having the qualifications described above, or even lesser qualifications, it is my opinion that such researchers would have been able to locate the material discussed

herein on their own or with the assistance of a research librarian with relative ease using the tools and resources described herein.

A. INDEXING

21. A researcher may discover material relevant to his or her topic in a variety of ways. One common means of discovery is to search for relevant information in an index of periodical and other publications. Having found relevant material, the researcher will then normally obtain it online, look for it in libraries, or purchase it from the publisher, a bookstore, a document delivery service, or other provider. Sometimes, the date of a document's public accessibility will involve both indexing and library date information. However, date information for indexing entries is often unavailable. This is especially true for online indices.

22. Indexing services use a wide variety of controlled vocabularies to provide subject access and other means of discovering the content of documents. The formats in which these access terms are presented vary from service to service.

23. Online indexing services commonly provide bibliographic information, abstracts, and full-text copies of the indexed publications, along with a list of the documents cited in the indexed publication. These services also often provide lists of publications that cite a given document. A citation of a document is evidence that the document was publicly available and in use by researchers no later than the publication date of the citing document.

24. Before the widespread development of online databases to index articles in journals, magazines, conference papers, and technical reports, libraries purchased printed volumes of indices. Graduate library school education mandated that students learn about the bibliographic control of disciplines, the prominent indexing volumes, and searching strategies required to use them effectively and efficiently. Half of the courses that I studied in library school were focused on bibliography and resources in academic disciplines.

25. Librarians consulted with information seekers to verify citations, check availability in union catalogs, printed books catalogs, the OCLC database, and make formal requests for materials (*e.g.*, books, conference proceedings, journal articles). Requests were transmitted using Telex machines, rudimentary email systems, and the United States Postal Service. During my career, I have performed and supervised staff who handled these resource sharing tasks.

26. A major firm known for the breadth of subjects and comprehensive treatment in the preparation of index volumes, the H. W. Wilson Company offered these reference resources since the firm was founded in 1898. The *Reader's Guide to Periodical Literature* is one of the best-known titles available from H. W. Wilson. Each volume includes a comprehensive index for 300 of the most popular and important periodicals published in the United States and Canada. Information seekers have subject access expressed in plain language terminology, author access,

and cross references to find the desired results from their searches. The family of index titles included *Science & Technology Index*, *Business Periodicals*, *Applied Science & Technology Index, Humanities Index, Biological & Agricultural Index*, and *Industrial Arts Index*. These printed indices have been superseded by digital database offerings available to information seekers through Ebsco.

27. Information seekers also used printed versions of *Chemical Abstracts* and *Index Medicus* to locate articles, scientific reports, and research papers. *Chemical Abstracts* began publication in 1907 and by 2007 its databases "contained more than 27 million records of journal and patent literature."[1] In 2010, *Chemical Abstracts* discontinued the print index. Access is now available through two electronic databases: *CAplus* and *Registry*.[2] *Index Medicus* is a bibliographic index to medical science information, started in 1879.[3] Currently, *PubMed* includes

the content that had been published as *Index Medicus*.[4]

28. Established in 1836 as part of the Surgeon General of the Army's Office, the National Library of Medicine (NLM) has been instrumental in the development of access to medical books, journals, and research publications. In the 1970s, NLM introduced MEDLINE, followed by "the establishment of the National Center for Biotechnology Information in 1988, the introduction of free MEDLINE in 1997, the creation of consumer-friendly MedlinePlus in 1998, and the introduction of ClinicalTrials.gov in 2000."[5]

29. A citation of a document by another is evidence that the document was publicly available and in use no later than the publication date of the citing document.

30. Online indexing services such as Google Scholar[6] or ScienceDirect[7] commonly provide bibliographic information, abstracts, and full-text copies of the indexed publications, along with a list of the documents cited in the indexed publication. These services also often provide lists of publications that cite a given

31. A researcher may discover material relevant to his or her topic in a variety of ways. A citation of a document by another is evidence that the document was publicly available and in use no later than the publication date of the citing document. One common means of discovery is to search for relevant information in an index of periodicals and other publications. Having found relevant material, the researcher will then normally obtain it online, look for it in libraries, or purchase it from a publisher, a bookstore, a document delivery service, or other provider. Sometimes, the date of a document's public accessibility will involve both indexing and library date information. However, date information for indexing entries is often unavailable. This is especially true for online indices.

32. Indexing services use a wide variety of controlled vocabularies to provide subject access and other means of discovering the content of documents. The Library of Congress Subject Authorities includes standard forms of terms and cross references that are included in bibliographic records. Subject headings are terms that an individual seeking a document regardless of format can enter in the search bar of the online catalog. Subjects also connect an authenticated term (one included in the Library of Congress subject headings list) with related, broader, and narrower terms. The formats in which these access terms are presented vary from service to service.

33. Online indexing services commonly provide bibliographic information, abstracts, and full-text copies of the indexed publications, along with a list of the documents cited in the indexed publication. These services also often provide lists of publications that cite a given document. A citation of a document is evidence that the document was publicly available and in use by researchers no later than the publication date of the citing document. Prominent indexing services include *Scopus,* the *IEEE Xplore* database, the *ACM Digital Library, Google Scholar,* and the *Internet Archive*.

B. MARC RECORDS AND THE ONLINE LIBRARY CATALOG

34. I am fully familiar with the library cataloging standard known as the MARC standard, which is an industry-wide standard method of storing and organizing library catalog information.[8] MARC was first developed in the 1960s by the Library of Congress. A MARC-compatible library is one that has a catalog consisting of individual MARC records for each of its items. Today, MARC is the primary communications protocol for the transfer and storage of bibliographic metadata in libraries.[9]

---

[8] The full text of the standard is available from the Library of Congress at http://www.loc.gov/marc/bibliographic/ (last accessed October 29, 2024).

[9] Almost every major library in the world is MARC-compatible. *See, e.g.*, Library of Congress, "MARC Frequently Asked Questions (FAQ)," https://www.loc.gov/marc/faq.html (last accessed October 29, 2024). ("MARC is the acronym for Machine-Readable Cataloging. It defines a data format that

35. Since at least the early 1970s and continuing to the present day, MARC has been the primary communications protocol for the transfer and storage of bibliographic metadata in libraries.[10] As explained by the Library of Congress:

> You could devise your own method of organizing the bibliographic information, but you would be isolating your library, limiting its options, and creating much more work for yourself. Using the MARC standard prevents duplication of work and allows libraries to better share bibliographic resources. Choosing to use MARC enables libraries to acquire cataloging data that is predictable and reliable. If a library were to develop a "home-grown" system that did not use MARC records, it would not be taking advantage of an industry-wide standard whose primary purpose is to foster communication of information.
>
> Using the MARC standard also enables libraries to make use of commercially available library automation systems to manage library operations. Many systems are available for libraries of all sizes and are designed to work with the MARC format. Systems are maintained and improved by the vendor so that libraries can benefit from the latest advances in computer technology. The MARC standard also allows

emerged from a Library of Congress-led initiative that began nearly fifty years ago. It provides the mechanism by which computers exchange, use, and interpret bibliographic information, and its data elements make up the foundation of most library catalogs used today."). MARC is the ANSI/NISO Z39.2-1994 (reaffirmed 2016) standard for Information Interchange Format.

[10] A complete history of the development of MARC can be found in *MARC: Its History and Implications* by Henrietta D. Avram (Washington, DC: Library of Congress, 1975) and available online from the Hathi Trust at https://babel.hathitrust.org/cgi/pt?id=mdp.39015034388556;view=1up;seq=1 (last accessed October 29, 2024).

libraries to replace one system with another with the assurance that their data will still be compatible.[11]

36. Thus, almost every major library in the world is MARC-compatible. *See* Library of Congress, *Frequently Asked Questions (FAQ)* ("MARC is the acronym for Machine-Readable Cataloging. It defines a data format that emerged from a Library of Congress-led initiative that began fifty years ago. It provides the mechanism by which computers exchange, use, and interpret bibliographic information, and its data elements make up the foundation of most library catalogs used today."). [12] MARC is the ANSI/NISO Z39.2-1994 standard (reaffirmed in 2016) for Information Interchange Format. The full text of the standard is available from the Library of Congress.[13]

37. A MARC record comprises several fields, each of which contains specific data about the work. Each field is identified by a standardized, unique, three-digit code corresponding to the type of data that follow. For example, a work's title is recorded in Field 245; the primary author of the work is transcribed in Field 100;

[13] Library of Congress, "Bibliographic Data," http://www.loc.gov/marc/bibliographic/ (last accessed October 29, 2024).

an item's International Standard Book Number ("ISBN") consisting of ten or thirteen digits is transcribed in Field 020; an item's International Standard Serial Number ("ISSN") is transcribed in Field 022; the Library of Congress classification notation is recorded in Field 050; and the publication date is recorded in Field 260 under the subfield "c." If a work is a periodical, then its publication frequency is recorded in Field 310, and the publication dates (*e.g.*, the first and last publication) are recorded in Field 362, which is also referred to as the enumeration/chronology field.[14]

38. The library that created the record is recorded in Field 040 in subfield "a" with a unique library code. When viewing the MARC record online via Online Computer Library Center's ("OCLC") bibliographic database, hovering over this code with the mouse reveals the full name of the library. I used this method of "mousing over" the library codes in the OCLC database to identify the originating library for the MARC records discussed in this declaration. Where this "mouse over" option was not available, I consulted the Directory of OCLC Libraries to identify the institution that created the MARC record.[15]

[15] OCLC, "Directory of OCLC members," https://www.oclc.org/en/contacts/libraries.html (last accessed October 29, 2024).

39. MARC records also include several fields that include subject matter classification information. An overview of MARC record fields is available through the Library of Congress.[16] For example, 6XX fields are termed "Subject Access Fields."[17] Among these, for example, is the 650 field; this is the "Subject Added Entry – Topical Term" field.[18] The 650 field is a "[s]ubject added entry in which the entry element is a topical term." These entries "are assigned to a bibliographic record to provide access according to generally accepted thesaurus-building rules (*e.g.*, *Library of Congress Subject Headings* (LCSH), *Medical Subject Headings* (MeSH))." *Id.* Further, MARC records include call numbers, which themselves include a classification number. For example, the 050 field is the "Library of Congress Call Number."[19] A defined portion of the Library of Congress Call (LCC) Number is the classification number, and "source of the classification number is *Library of Congress Classification* and the *LC Classification-Additions and Changes*." Thus, included in the 050 field is a subject matter classification. Further,

the 082 field is the "Dewey Decimal Call Number."[20] A defined portion of the Dewey Decimal Call (DDC) Number is the classification number, and "source of the classification number is the *Dewey Decimal Classification and Relative Index*." Thus, included in the 082 field is a subject matter classification. Each item in a library has a single classification number. A library selects a classification scheme (*e.g.*, the Library of Congress classification scheme just described or a similar scheme such as the Dewey Decimal classification scheme) and uses it consistently. When the Library of Congress assigns the LCC classification number, it appears as part of the 050 field. When the Library of Congress assigns the DDC classification number, it appears as part of the 082 field. If a local library assigns the classification number, it appears in a 090 field. In either scenario, the MARC record includes a classification number that represents a subject matter classification.

C. OCLC

40. The OCLC was created "to establish, maintain and operate a computerized library network and to promote the evolution of library use, of libraries themselves, and of librarianship, and to provide processes and products for the benefit of library users and libraries, including such objectives as increasing

availability of library resources to individual library patrons and reducing the rate of rise of library per-unit costs, all for the fundamental public purpose of furthering ease of access to and use of the ever-expanding body of worldwide scientific, literary and educational knowledge and information."[21] Among other services, OCLC and its members are responsible for maintaining the WorldCat database,[22] used by independent and institutional libraries throughout the world.

41. OCLC also provides its members online access to MARC records through its OCLC bibliographic database. When an OCLC member institution acquires a work, it creates a MARC record for this work in its computer catalog system in the ordinary course of its business. MARC records created at the Library of Congress are directly uploaded or may be tape-loaded into the OCLC database through a subscription to MARC Distribution Services daily or weekly. Once the MARC record is created by a cataloger at an OCLC member institution or is tape-loaded from a participating institution, the MARC record is then made available to any other OCLC members online, and therefore made available to the public. Accordingly, once the MARC record is created by a cataloger at an OCLC member

institution or is tape-loaded from the Library of Congress or another library anywhere in the world, any publication corresponding to the MARC record has been cataloged and indexed according to its subject matter such that a person interested in that subject matter could, with reasonable diligence, locate and access the publication through any library with access to the OCLC bibliographic database or through the Library of Congress.

42. When an OCLC member institution creates a new MARC record, OCLC automatically supplies the date of creation for that record. The date of creation for the MARC record appears in the fixed field (008), characters 00 through 05. The MARC record creation date reflects the date on which, or shortly after which, the item was first acquired or cataloged. Initially, field 005 of the MARC record is automatically populated with the date the MARC record was created in year, month, day format (YYYYMMDD) (some of the newer library catalog systems also include hour, minute, second (HHMMSS)). Thereafter, the library's computer system may automatically update the date in field 005 every time the library updates the MARC record (*e.g.*, to reflect that an item has been moved to a different shelving location within the library). Field 005 is visible when viewing a MARC record via an appropriate computerized interface. The date upon which the most recent update to field 005. Thus, when an item's MARC record has been printed to hardcopy—as is the case with the exhibits to this report—the date reflected in field 008 is

necessarily on or after the date the library first cataloged and indexed the underlying item.

43. Once one library has cataloged and indexed a publication by creating a MARC record for that publication, other libraries that receive the publication do not create additional MARC records—the other libraries instead rely on the original MARC record. They may update or revise the MARC record to ensure accuracy, but they do not replace or duplicate it. This practice does more than save libraries from duplicating labor. It also enhances the accuracy of MARC records. Further, it allows librarians around the world to know that a particular MARC record is authoritative (in contrast, a hypothetical system wherein duplicative records were created would result in confusion as to which record is authoritative).

44. The date of creation of the MARC record by a cataloger at an OCLC member institution reflects when the underlying item is accessible to the public. Upwards of two-thirds to three-quarters of book sales to libraries come from a jobber or wholesaler for online and print resources. These resellers make it their business to provide books to their customers as fast as possible, often providing turnaround times of only a single day after publication. Libraries purchase a significant portion of the balance of their books directly from publishers themselves, which provide delivery on a similarly expedited schedule. In general, libraries make these purchases throughout the year as the books are published and shelve the books as

soon thereafter as possible in order to make the books available to their patrons. Thus, books are generally available at libraries across the country within just a few days of publication.

V. PUBLICATIONS

A. Document 1: Exhibit 1007 ("Bourque")

45. Exhibit 1007 is a copy of the journal article titled "HeartMate III: Pump Design for a Centrifugal LVAD with a Magnetically Levitated Rotor" by Kevin Bourque, David B. Gernes, Howard M. Loree 2nd, J. Scott Richardson, Victor L. Poirier, Natale Barletta, Andreas Fleischli, Giampiero Foiera, Thomas M. Gempp, Reto Schoeb, Kenneth N. Litwak, Takehide Akimoto, Mary J. Watach, and Philip Litwak (hereafter "Bourque"). The Bourque article was published in Volume 47, Number 4 of ASAIO Journal and was found in the National Library of Medicine (Bethesda, Maryland). The Bourque article appears beginning on page 401 of this issue dated July 2001. Exhibit 1007 is a true and correct copy of the Bourque article (pages 401-405). Specifically, the text of the article is complete; no pages are missing, and the text on each page appears to flow seamlessly from one page to the next; further, there are no visible alterations to the document. The Bourque article

is available from the publisher,[23] through the National Library of Medicine,[24] and in the digital repository *ResearchGate*.[25] The digital version of the Bourque article was publicly available on July 1, 2001, as indicated on the Europe PMC website.[26] Exhibit 1007 was found within the custody of a library – a place where an authentic copy of this journal would likely be. Exhibit 1007 is a true and correct copy in a condition that creates no suspicion about its authenticity.

46. Attached hereto as Attachment 1A is a true and correct copy of the MARC record for *ASAIO Journal* from the National Library of Medicine online catalog. Library ownership is indicated by the presence of the library's code ("DNLM") in the first field 035. The library continues to update this MARC record and enhanced the MARC record to meet current cataloging rules. The most recent enhancement to Attachment 1A occurred on June 8, 2024, as shown in field 005 ("20240608"). I personally identified and retrieved the MARC record that is

Attachment 1A.

47. Based on finding a copy of Exhibit 1007 in the National Library of Medicine and MARC record in its online library catalog attached as Attachment 1A, it is my opinion that the Bourque article published in *ASAIO Journal* was publicly available on or shortly after July 1, 2001, as shown on the Europe PMC website.

48. Attachment 1A includes an entry in field 060 ("W1 $b AS111CL")—as described above, a subject matter classification number consistent with the National Library of Medicine classification system (analogous to the Dewey Decimal classification system). Attachment 1A also shows that Exhibit 1007 was catalogued with a descriptor term reading "Artificial Organs $v periodical" (see Attachment 1B, National Library of Medicine subject heading D001187) in the 650 field.

49. As noted in the holdings information (362 field), the National Library of Medicine has received *ASAIO Journal* since 1992 and continues to receive the publication. In view of the MARC record for Exhibit 1007, the Bourque article was publicly available on or shortly after July 1, 2001, because the serial title had been received, cataloged, and indexed in the National Library of Medicine and made part of its online catalog database.

50. Attached hereto as Attachment 1C is a true and correct copy of the MARC record for *ASAIO Journal* obtained from the OCLC bibliographic database.

As previously noted, the library that created the record is recorded in field 040 with a unique library code. For Attachment 1C, that library code is "NSD," which means that the MARC record for this serial was cataloged as part of the National Serials Data Program at the Library of Congress. As can be seen in field 008 ("Date entered on file"), a cataloger at the Library of Congress created OCLC record number 24256275 on August 20, 1991 ("910820"). The library continues to update and enhance this MARC record to meet current cataloging rules. The most recent enhancement to Attachment 1C occurred on November 13, 2022, as shown in field 005 ("20221113"). I personally identified and retrieved the MARC record that is Attachment 1C. The "BLvl" entry in Attachment 1C is "s," which indicates that *ASAIO Journal* is a serial publication. Field 310 of Attachment 1C reads "Quartrly." Accordingly, the MARC record for Exhibit 1007 corresponds to *ASAIO Journal* from the time the serial title began and includes the date of the Bourque article.

51. Attachment 1C includes an entry in 050 ("RD130 $b .A788")—as described above, a subject matter classification number consistent with the Library of Congress classification system (analogous to the Dewey Decimal classification system), an entry in field 060 ("W1 $b AS111CL")—as described above, a subject matter classification number consistent with the National Library of Medicine classification system (analogous to the Dewey Decimal classification system), and an entry in field 082 ("617")—as described above, a subject matter classification

number consistent with the Dewey Decimal classification system. Attachment 1C also shows that Exhibit 1007 was catalogued with two descriptor terms reading "Artificial organs $v Periodicals" (see Attachment 1D, Library of Congress subject heading sh85008195 and Attachment 1E, Library of Congress subject heading sh85099890) and "Artificial Organs $v periodical" (see Attachment 1B, National Library of Medicine subject heading D001187) in the 650 fields. Thus, as of its cataloging, the publication corresponding to the MARC record attached hereto as Attachment 1C was indexed according to its subject matter by virtue of at least four independently sufficient classifications: the field 050 entry, the field 060 entry, the field 082 entry, and the field 650 entries. As of August 20, 1991, the MARC record attached hereto as Attachment 1C was accessible through any library with access to the OCLC bibliographic database or the online catalog at a library that subscribed to the serial, which means that the corresponding publication was publicly available on or before that same date through any library with access to the OCLC bibliographic database or through an individual library.

52. WorldCat indicates that *ASAIO Journal* as cataloged at the Library of Congress is currently available from 547 libraries.[27] In view of the above, this issue

[27] WorldCat, "ASAIO journal : a peer reviewed journal of the American Society for Artificial Internal Organs," https://search.worldcat.org/title/24256275 (last accessed October 29, 2024).

of *ASAIO Journal* was publicly available on or shortly after July 1, 2001, because by that date it had been cataloged and indexed at the Library of Congress, made part of the OCLC bibliographic database, and received in the National Library of Medicine. For these reasons, it is my opinion that Exhibit 1007 was published and accessible to the public on July 1, 2001.

B. Document 2: Exhibit 1006 ("Akamatsu")

53. Exhibit 1006 is a copy of the journal article titled "Development of Terumo Implantable Left Ventricular Assist System (T-ILVAS) with a Magnetically Suspended Centrifugal Pump" by Chisato Nojiri, Toshihiko Kijima, Jun Maekawa, Kunio Horiuchi, Takayuki Kido, Tomoko Sugiyama, Takehisa Mori, Naoya Sugiura, Takehiko Asada, Takayoshi Ozaki, Minoru Suzuki, Teruaki Akamatsu, and Tetsuzo Akutsu (hereafter "Akamatsu"). The Akamatsu article was published in Volume 2, Issue 1 of *Journal of Artificial Organs* and was found in the National Library of Medicine (Bethesda, Maryland). The Akamatsu article appears beginning on page 3 of this issue dated 1999. Exhibit 1006 is a true and correct copy of the Akamatsu article (pages 3-7). Specifically, the text of the article is complete; no pages are missing, and the text on each page appears to flow seamlessly from one page to the next; further, there are no visible alterations to the document. The

Akamatsu article is available from the publisher,[28] SpringerLink. The digital version of the Akamatsu article was publicly available on March 1, 1999, as indicated on the publisher's website. Exhibit 1006 was found within the custody of a library – a place where an authentic copy of this journal would likely be. Exhibit 1006 is a true and correct copy in a condition that creates no suspicion about its authenticity.

54. Attached hereto as Attachment 2A is a true and correct copy of the MARC record for *Journal of Artificial Organs* from the National Library of Medicine online catalog. Library ownership is indicated by the presence of the library's code ("DNLM") in the first field 035. The library continues to update this MARC record and enhanced the MARC record to meet current cataloging rules. The most recent enhancement to Attachment 2A occurred on June 7, 2024, as shown in field 005 ("20240607"). I personally identified and retrieved the MARC record that is Attachment 2A.

55. Based on finding a print copy of Exhibit 1006 in the National Library of Medicine and MARC record in its online library catalog attached as Attachment 2A, it is my opinion that the Akamatsu article published in *Journal of Artificial Organs* was publicly available on or shortly after March 1, 1999, as shown on the publisher's website.

[28] Available online at https://link.springer.com/article/10.1007/BF01235517 (last accessed October 29, 2024).

56. Attachment 2A includes an entry in field 060 ("W1 $b JO544P")—as described above, a subject matter classification number consistent with the National Library of Medicine classification system (analogous to the Dewey Decimal classification system). Attachment 2A also shows that Exhibit 1006 was catalogued with a descriptor term reading "Artificial Organs $v periodical" (see Attachment 1B, National Library of Medicine subject heading D001187) in the 650 field.

57. As noted in the holdings information (362 field), the National Library of Medicine has received *Journal of Artificial Organs* since 1998 and continues to receive the publication. In view of the MARC record for Exhibit 1006, the Akamatsu article was publicly available on or shortly after March 1, 1999, because the serial title had been received, cataloged, and indexed in the National Library of Medicine and made part of its online catalog database.

58. Attached hereto as Attachment 2B is a true and correct copy of the MARC record for *Journal of Artificial Organs* obtained from the OCLC bibliographic database. As previously noted, the library that created the record is recorded in field 040 with a unique library code. For Attachment 2B, that library code is "NLM," which means that the MARC record for this serial was cataloged at the National Library of Medicine (Bethesda, Maryland). As can be seen in field 008 ("Date entered on file"), a cataloger at the National Library of Medicine created OCLC record number 41640445 on October 16, 1998 ("981016"). The library

continues to update and enhance this MARC record to meet current cataloging rules. The most recent enhancement to Attachment 2B occurred on March 15, 2019, as shown in field 005 ("20190315"). I personally identified and retrieved the MARC record that is Attachment 2B. The "BLvl" entry in Attachment 2B is "s," which indicates that the *Journal of Artificial Organs* is a serial publication. Field 310 of Attachment 2B reads "Two no. a year." Accordingly, the MARC record for Exhibit 1006 corresponds to the *Journal of Artificial Organs* from the time the serial title began and includes the date of the Akamatsu article.

59. Attachment 2B includes an entry in field 060 ("W1 $b JO544P")—as described above, a subject matter classification number consistent with the National Library of Medicine classification system (analogous to the Dewey Decimal classification system). Attachment 2B also shows that Exhibit 1006 was catalogued with a descriptor term reading "Artificial organs $v Periodicals" (see Attachment 1D, Library of Congress subject heading sh85008195 and Attachment 1E, Library of Congress subject heading sh85099890) in the 650 field. Thus, as of its cataloging, the publication corresponding to the MARC record attached hereto as Attachment 2B was indexed according to its subject matter by virtue of at least two independently sufficient classifications: the field 060 entry and the field 650 entry. As of October 16, 1998, the MARC record attached hereto as Attachment 2B was accessible through any library with access to the OCLC bibliographic database or

the online catalog at a library that subscribed to the serial, which means that the corresponding publication was publicly available on or before that same date through any library with access to the OCLC bibliographic database or through an individual library.

60. WorldCat indicates that the *Journal of Artificial Organs* as cataloged at the National Library of Medicine is currently available from 1,213 libraries.[29] In view of the above, this issue of the *Journal of Artificial Organs* was publicly available on or shortly after March 1, 1999, because by that date it had been cataloged, indexed, and received at the National Library of Medicine and made part of the OCLC bibliographic database. For these reasons, it is my opinion that Exhibit 1006 was published and accessible to the public on March 1, 1999.

VI. SUMMARY OF OPINIONS

Annotation
usually to replace function, as HEART, ARTIFICIAL or KIDNEY, ARTIFICIAL: do not confuse with PROSTHESES AND IMPLANTS which is usually cosmetic; not for injections, like silicones, to replace substance; coord IM with specific organ (IM) with no qualif but note available precoords
Scope Note
Devices intended to replace non-functioning organs. They may be temporary or permanent. Since they are intended always to function as the natural organs they are replacing, they should be differentiated from PROSTHESES AND IMPLANTS and specific types of prostheses which, though also replacements for body parts, are frequently cosmetic (EYE, ARTIFICIAL) as well as functional (ARTIFICIAL LIMBS).
