Abstract (summary)

Lawrence S. Moy, M.D., a board-certified dermatologic surgeon practicing in Manhattan Beach, Calif., says, "The **SilkPeel** is one of the most useful machines we have used in our office for dermatology and cosmetic treatments. The **SilkPeel** is geared to not abrade past the stratum spinosum layer, maintaining a gentle abrasion that still is protective in the skin. Patients find that the skin heals much faster from the treatment than the traditional microdermabrasion because of the healing agents delivered and the unique patent- pending design of the **SilkPeel** .

"Our objective with the **SilkPeel** is to set the gold standard in aesthetic technology," said Ken Karasiuk, President of emed, Incorporated. "The positive responses we're receiving from physicians about the **SilkPeel** is very encouraging and demonstrates that we are hitting the mark."

THOUSAND OAKS, Calif., Feb. 6 /PRNewswire/ -- A breakthrough procedure known as **SilkPeel** (TM) DermalInfusion(TM) promises to redefine skin resurfacing by combining precise stratum corneum exfoliation with a soothing delivery of topical formulations for specific dermatological conditions.

The **SilkPeel** was recently launched by its manufacturer, emed, Incorporated of Thousand Oaks, Calif., and is being showcased this weekend at the American Academy of Dermatology Annual Meeting in Washington, DC. It is the only skin resurfacing product on the market that provides both non-invasive exfoliation and delivery of skin-specific topical solutions under pressure.

Operating on a closed-loop vacuum system, the **SilkPeel**'s diamond treatment head exfoliates the skin while delivering a topical dermaceutical at a controlled intensity, stimulating new cell growth. With the **SilkPeel**'s delivery system as well as its crystal- free technology, patients experience little or no discomfort. Visible results are obtained after as few as one treatment, with more significant results being noted after four to six treatments spaced seven to 10 days apart.

Lawrence S. Moy, M.D., a board-certified dermatologic surgeon practicing in Manhattan Beach, Calif., says, "The **SilkPeel** is one of the most useful machines we have used in our office for dermatology and cosmetic treatments. The **SilkPeel** is geared to not abrade past the stratum spinosum layer, maintaining a gentle abrasion that still is protective in the skin. Patients find that the skin heals much faster from the treatment than the traditional microdermabrasion because of the healing agents delivered and the unique patent- pending design of the **SilkPeel** .

"In my office, patients love the **SilkPeel** and we have stopped using the old microdermabrasion machines we have. Clinically, we have used the **SilkPeel** effectively for acne, psoriasis, irritated skin and sun damage with no problems."

"Our objective with the **SilkPeel** is to set the gold standard in aesthetic technology," said Ken Karasiuk, President of emed, Incorporated. "The positive responses we're receiving from physicians about the **SilkPeel** is very encouraging and demonstrates that we are hitting the mark."

emed, Incorporated is a privately-held California corporation founded in 1999. The company develops, manufactures and distributes innovative technologies for the aesthetic physician. For more information regarding the **SilkPeel** DermalInfusion system, visit www.4emed.com.
