PC17YC

High Resolution Micro Video Camera

Super High Resolution Color Camera

Finally, an affordable [color](#) microvideo camera with stunning near-broadcast quality performance and truly tiny size. Applications include action sports video, computer image capture, teleconferencing, robotics, R/C Action Video, covert investigative journalism, surveillance and more.

HIGH PERFORMANCE + LOW COST

The PC-17YC gives you incredible performance, previously unheard of in a 2.5 ounce, \$379.95 package. With over 410,000 pixels and 450 lines of [resolution](#), it offers performance superior to both High-8 and Super VHS (they are 400 lines). The PC-17YC is made up of three PC boards (each approximately 1 5/8" square!), assembled in a stacked configuration. It easily fits in a 2" cubed enclosure.

AUTOMATIC FEATURES

Built-in auto gain control, auto white balance, auto black balance and electronic auto shutter (1/60 - 1/100,000 second) for great performance under nearly all conditions. The PC-17YC also features a custom automatic [color](#) processor chip that compensates for various lighting conditions ranging from outdoor sunlight to fluorescent and tungsten lighting. Saturation, hue, and luminance of the [color](#) signal are monitored and adjusted hundreds of times per second to ensure super accurate video quality. These automatic functions are perfect for action sports videography and other applications where on the fly adjustments are not possible. The high quality medium wide angle lens provides sharp, clear images from 6" to infinity. Low light rating is 2 [lux](#).

CUSTOMIZABLE FOR YOUR APPLICATION

This camera was great when we introduced it five years ago, but now it is even better. The new optional outboard control module lets you access and optimize functions like shutter speed, AGC, white balance, back light compensation-- you can even place a title like "Bunji Productions" or "In-Car Camera" at bottom of the screen. All functions are easily controlled by on-screen menus, and the PC-17YC retains your custom programming in non-volatile memory. The PC-17YC's specifications are truly amazing. 450 lines of [resolution](#) is fantastic in any [color](#) camera, but in a 2.5 ounce, 2 inch cube, these numbers are phenomenal. By virtue of its high performance, manual control options, low cost and ultra compact size, it is an excellent value for the serious videographer or hobbyist. Call us today, as quantities are limited.

Comes with easy connection instructions, plug and play cables, 6 month warranty and 30 day money-back satisfaction guarantee.
