

Lectrosonics Announces Firmware Updates For Select Transmitters To Record & Transmit Simultaneously For Markets Outside Of The United States

News & Announcements, Press Releases / August 26, 2025

Rio Rancho, NM (August 26, 2025) — [Lectrosonics](#) is pleased to announce a set of firmware updates available for users outside the United States to allow for simultaneous recording and transmitting in certain transmitter models. From August 26 forward, all units of DBSM, DBSMD, DPR-A, SMWB, and SMDWB for non-U.S. markets will come with the new firmware.

Users outside the US or Canada already owning these models with /X, /E01, /E06, and /E09 market identifiers, and also the DPR/E01, can download updated firmware for installation in the field. Precise instructions for performing the upgrade will be available from the Lectrosonics web site by visiting <http://www.lectrosonics.com/rectx>.

Users outside the US or Canada desiring the update and with transmitter model numbers not including E01, E06, or X should email service.repair@lectrosonics.com or call 505 892-4501 or 800-821-1121 for more details.

Users with existing units in Canada desiring the update will be required to send their units to the Lectrosonics Canada office in Toronto.

US users with these transmitter models are not eligible for the feature upgrade at this time.

"Our customers worldwide have long asked for the ability to transmit and record simultaneously," states Karl Winkler, Lectrosonics' EVP of product design and distribution. "We're pleased to now offer that feature for our international customers."

About Lectrosonics

Well-respected within the film, broadcast, live performance, and theatre technical communities since 1971, Lectrosonics wireless microphone systems and audio processing products are used daily in mission-critical applications by audio engineers familiar with the company's dedication to quality, customer service, and innovation.
