## Pearson Education

## : Profile :

In a world shaped by an increasingly knowledge-based economy, there is a ravenous appetite for education in both the developed and developing worlds. Governments, corporations, and individuals see education as the path to self-determination and prosperity and they are willing to invest more than ever in it. New technologies are revolutionizing education, allowing people to learn anywhere, any time, and at their own pace. As the world's leading integrated education company, we combine educational content and smart applications to educate people of all ages in all parts of the world.

We have found powerful ways of using new media to help people learn. In June 2000, we announced a series of major strategic alliances to create Learning Network([www.learningnetwork.com](http://www.learningnetwork.com)), an online consumer education network and the Internet's premier education source.

In September 2000, we acquired National Computer Systems ([www.ncspearson.com](http://www.ncspearson.com)), one of the leading commercial testing and educational services companies in the United States. The combination of NCS and Pearson Education made us the world's leading integrated education company, linking curriculum, assessment, and data management.

We are the leading US school\* (kindergarten to 12th grade) publisher, with a comprehensive range of textbooks, supplementary, and electronic education programmes. Our premier elementary ([www.scottforesman.com](http://www.scottforesman.com)) and secondary imprints([www.phschool.com](http://www.phschool.com)) publish some of the very best school programmes covering subjects such as reading, literature, math, science and social studies.

We are a leading publisher of online assessment and digital courseware through the Computer Curriculum Corporation ([www.ccclearn.com](http://www.ccclearn.com)), the Waterford Early Reading Programme and the KnowZone ([www.kz.com](http://www.kz.com)). We also publish supplementary teaching aids for both elementary ([www.pearsonlearning.com](http://www.pearsonlearning.com)) and secondary schools ([www.globefearon.com](http://www.globefearon.com)) and teacher-written activity books ([www.phdirect.com](http://www.phdirect.com)).

We are by far the leading higher education publisher in the US, with imprints such as Addison Wesley Longman ([awl](http://www.awl.com)), Allyn & Bacon ([www.abacon.com](http://www.abacon.com)) and Prentice Hall ([www.prenhall.com](http://www.prenhall.com)). Over 1,000 of our college textbooks have an interactive companion website (such as [www.abacon.com/albanese](http://www.abacon.com/albanese)) with online study guides designed to reinforce text concepts, and chat rooms and bulletin boards to facilitate interaction and communication between students and faculty. An increasing number of our programmes are delivered through online course management systems that provide a powerful set of easy-to-use tools that allow professors to create sophisticated web-based courses.

Our professional and technology group publishes over 1,000 computer and technology titles a year (our imprints include Macmillan USA, Que, Sams, Prentice Hall, Cisco Press, Adobe Press, New Riders, Peachpit and Addison Wesley) complemented by an online presence ([www.informit.com](http://www.informit.com)), which aims to be the leading vertical portal for accomplished and aspiring IT professionals.

More people learn English as a second language with our programmes ([www.longman-elt.com](http://www.longman-elt.com)) than those of any other publisher. We are also a leading publisher of indigenous works in the school, university and professional markets in countries all over the world.

FT Knowledge ([www.ftknowledge.com](http://www.ftknowledge.com)) is one of the world's leading providers of business education and management development. We specialise in providing learning and development that is highly relevant to the needs of businesses and the people that work within them.

Pearson Education, formed in November 1998 through the acquisition of the Simon & Schuster education business and its merger with Addison Wesley Longman (AWL), performed very strongly in its first full year of operation. Sales increased to £1.72bn, an underlying increase of 9.4% on pro forma sales in 1998. Our US school business had an excellent year, increasing pro forma sales by some 9% to £586m.

Our bestselling math and social studies programmes led the way. They gained substantial market share, creating a platform which will help to drive strong backlist sales in future years. While we were marketing and selling these programmes, we were also working hard in finalising the new reading, literature and science programmes that will secure our future growth.

Nor did our US higher education and professional publishing business miss a beat. With a 12% increase in sales, our college publishing operations outperformed the competition and strengthened their market leading position. We stepped up the development of text/web and online course management programmes that create more interactive learning, enabling us to build closer relations with professors and students. We also invested more in the new signings and successful first editions that will keep us ahead of the pack. Our professional and technology publishing group achieved similar growth, buoyed by a strong publishing programme and surging interest in technology and e-commerce issues.

Our International business increased sales by 5% to £446m. We moved swiftly to transform the extensive international networks of both

AWL and Simon & Schuster into a single cohesive force, building up our local publishing presence and strengthening our distribution and marketing networks. In print and online, we continued to expand our leading English language teaching business as the number of people around the world who want to learn English grows rapidly by the day. In the latter part of the year, we capitalised on the first signs of sustained economic recovery in emerging Asian and Latin American markets.

FT Knowledge made losses of £8m as it invested rapidly in expanding its scale and scope to capitalise on the explosive growth of online learning and the burgeoning demand for business qualifications.

We are working with the University of Michigan Business School, one of the leading providers of executive education in America, to offer online executive management courses. We have set up a joint venture with Regents' College, a leading US 'virtual university', to accredit a wide range of FT Knowledge business and computing programmes. And we are working with The Wharton School of the University of Pennsylvania University, one of the most prestigious business schools in the world, to offer programmes in eBusiness which will be delivered and supported online.

Across Pearson Education as a whole, we are in good shape to deliver the planned \$130m of annual integration savings by the end of 2000. We are also keeping our eye firmly on the main goal of meeting the very high pedagogical standards that our customers – teachers and students, pupils and their parents, education boards and college faculties – expect of the world's leading education company.

To the surprise of most Mac fans, the number one bestselling Macintosh software is Microsoft Office for the Macintosh. It's by far the most popular Macintosh software, and the first software purchase a new Mac user is likely to make. And for the first time, Office 2001 comes without a single page of printed instructions. The packaging is a five-inch-square clear plastic case housing the CD-ROM and little else. Fortunately, Pogue Press/O'Reilly is once again ready to embrace the befuddled and overwhelmed--with *Office 2001 for Macintosh: The Missing Manual*. It tackles each of the primary Office applications with depth, humor, and clarity, and provides relief for the hapless Mac user who'd rather read professionally written printed instructions than hunt through a maze of personality-free help screens. The book is structured to help the beginner as well as the seasoned user. Part One provides an overview of Word. From "What's New," to "Basic Word Processing," to "Document Design," to "Advanced Word Processing"--with in-depth details on creating Web pages and performing mail merges using Word. Part Two covers the new Palm-syncable calendar in Entourage, including all aspects of email, how to best

This book exceeded my expectations. It is written in that clear way that helps you to understand processes that are after all, usually pretty hard to understand. The many sidebars of tips are especially helpful and reading it made me want to try out some of the new stuff mentioned.

★★★★★ **Blown Away**

Reviewed in the United States on February 13, 2002

I have been a Wordperfect user forever, I had it on the Atari platform and then I got the Mac version when I switched to Macintosh computers. I was pretty disappointed when Wordperfect dead-ended. I have been using 3.5e for the last little while, but the world has taken to Word and I, until now, refused to go along. One major sticking point on changing from Wordperfect to Word was that Word could not jump from start of file to end without me having to use two hands. I had learned to hit either the "home" or "end" keys and Word bugged the hell out of me because I had to use the command key as well. A minor annoyance to most, but to me this was big!

I bought Office 2001 for Dummies and got no help. The best I got was to use icons for start and end. A bit of an improvement, but still not what my fingers and brain had become instinctively used to.

I have had the Missing Manual for Office 2001 for a day and I was able to assign the keyboard to do it my way: The Old WordPerfect Way!

Thank you all of you. This book paid for itself with that one tip.

I have been browsing the Missing Manual, and it is overwhelming - in a satisfying way. It has so much more than the average computer manual. Best of all, it explains it in sufficient detail that I can actually do what

★★★★★ **It's Worth the Money!**

Reviewed in the United States on September 7, 2001

I picked up this book a couple of weeks back and I have to say that I love it enough that I am going to go back and pick up the OS 9 Missing Manual.

The book is well laid-out, it's clearly written, it's up to date (for now) and I found out enough info for Excel that made it worth the money to buy it.

The book is aimed at someone who is relatively familiar with the Mac operating system but not with Office 2001. It starts from the beginning but does not coddle you. I think it even goes so far as Excel macro programming but I have yet to go so far.

I used to be a computer bookstore manager(Toronto Computer Books) and I've seen a LOT of books in my time. This is one that I would actually pay for full price! :-)

### About this book

Search engines are the keys that unlock the information treasure houses of the Internet, but most people have no idea how to tap their power. All the major search engines have revised their services and interfaces, so whether you're an experienced Internet researcher or a Web newbie, you could probably use this revised and updated book.

You could spend a great deal of time learning the strengths and weaknesses of each engine, or you can simply pick up **Search Engines for the World Wide Web, 3rd Edition: Visual QuickStart Guide**. The book introduces you to the basic search techniques and then shows you how to work with specific and specialized engines using clear, step-by-step, up-to-date chapters on each of the most popular Web search engines: AltaVista, AOL Search, Excite, Google, HotBot, Lycos, MSN Search, Netscape Search, Northern Light, and Yahoo! It also shows the reader how to quickly find particular people or companies via other search tools, includes expanded coverage of tools and utilities for Web searchers, and covers new features and services, such as "family filters," clustering of search results, pay-for-placement search engines, paid-submit services, ask-an-expert services, and more.
