

U.S. PATENT NO. 10,805,687 V/S SPORTRADAR Live Channel Trading

I. INTRODUCTION

The chart below demonstrates how Defendant Sportradar Group, AG (“Defendant” or “Sportradar”) as well as Defendant’s partners, customers, and end users of the products and features discussed below, directly infringe, either literally or under the doctrine of equivalents, at least claims 19 and 20 of U.S. Patent No. 10,805,687 (“the ’687 Patent”). Defendant and Defendant’s partners, customers, and end users directly infringe the identified claims at least by making, using, selling, installing, configuring to operate, importing, testing, and/or offering to sell at least Defendant’s Sportradar Live Channel Trading and other offerings and services that integrate with Defendant’s Sportradar Live Channel Trading (collectively, “the Accused Products”) either alone, and/or when installed and operated as designed and intended on a computer system or network, as detailed below.

Each element of each asserted claim is presently alleged to be literally present. Because discovery has not started and the Asserted Claims have not yet been construed, SportsCastr Inc. (d/b/a PANDA Interactive) (“Plaintiff” or “PANDA”) reserves the right to supplement its contentions, including with respect to the Doctrine of Equivalents as appropriate. In addition, any of Defendant’s products that perform similar functions and/or incorporate or rely on the same or similar functionality (for example, without limitation, any predecessor or successor products performing the same functions in the same ways or products which use the same software, plugins, or libraries or call the functions underlying the operations identified below) as the Accused Products also infringe in the manner set out below.

Defendant directly infringes at least claims 19 and 20 of the ’687 Patent, either literally or under the doctrine of equivalents, by making, using, offering to sell and selling the systems described below. Defendant’s partners, customers, and end users of its Accused Products and corresponding systems and services directly infringe at least claims 19 and 20 of the ’687 Patent, literally or under the doctrine of equivalents, at least by using the Accused Products and corresponding systems and services, as described below.

Defendant has actively induced and are actively inducing infringement of at least claims 19 and 20 of the ’687 Patent with specific intent to induce infringement, and/or willful blindness to the possibility that its acts induce infringement, in violation of 35 U.S.C. § 271(b). For example, Defendants encourages and induces customers to use Sportradar emBET in a manner that infringes claims 19 and 20 of the ’687 Patent at least by offering and providing the software and by engaging in activities relating to selling, marketing, advertising, promotion, installation, support, and distribution of the Accused Products.

Defendant encourages, instructs, directs, and/or requires third parties—including its certified partners and/or customers—to use the Accused Products in infringing ways. Defendants further encourages and induces its customers to infringe claims 19 and 20 of the

'687 Patent: 1) by widely advertising those services, and providing technical support and instructions to users, and 2) through activities relating to marketing, advertising, promotion, installation, support, and distribution of the Accused Products, including its video streaming software, and services in the United States. (See PANDA-SR_000063-PANDA-SR_000065, <https://sportradar.com/sports-entertainment/audiovisual/embet/?lang=en-us>.) Further, as the entity that provides installation, implementation, and integration of the Accused Products in addition to ensuring the Accused Product remains operational for each customer through ongoing technical support, on information and belief, Defendant and/or its partners affirmatively aid and abet each customer's use of the Accused Products in a manner that infringes the '687 Patent.

Defendant also contributes to the infringement of its partners, customers, and end-users of the Accused Products by providing within the United States or importing into the United States the Accused Products, constituting a material part of the inventions claimed, and not a staple article or commodity of commerce suitable for substantial non-infringing uses. Indeed, as shown below, the Accused Products have no substantial non-infringing uses because the accused functionality, including the one-to-many socket architecture and separate channels for video and event information, is an integral part of the Accused Products and must be performed for the Accused Products to perform their intended purpose. These functionalities are continually running when the system is in use and, on information and belief, cannot be removed or disabled (or, if they could, the system would no longer suitably function for its intended purpose). Moreover, for the same reasons, without the system and components identified below that practice the '687 Patent, that functionality could not be performed. Additionally, the accused functionality, including the one-to-many socket architecture and separate channels for video and event information, itself has no substantial non-infringing uses because the components, modules and methods identified below are a necessary part of that functionality. For example, without the on-to-many socket architecture, the Accused Products could not effectively synchronize the event information across multiple viewers. These functionalities are continually running when the system is in use and cannot be removed or disabled (or, if they could, the system would no longer suitably function for its intended purpose). Moreover, for the same reasons, without the system and components identified below that practice claimed in the '687 Patent, that functionality could not be performed.

Indeed, as shown below, the Accused Products have no substantial non-infringing uses because the accused functionality is an integral part of the Accused Products and must be performed for the Accused Products to perform their intended purpose. For example, at least the functionalities and corresponding modules (whether software and/or hardware) described below have no suitable non-infringing use and form a material part of the Accused Products. In other words, when each of the Accused Products operates, the functions below are performed. Moreover, when the functionality and modules specifically described below are operated, they perform the steps described below. The Accused Products (and the specific modules and functionalities described herein) are designed and intended specifically to perform the inventions claimed in the Asserted Claims, and do not have any other purpose. For example, the

Accused Products and accused functionalities (e.g., the one-to-many architecture) constitute a material part of the inventions claimed because such architecture is integral to the system as recited in the claims of the '687 Patent. None of these products are staple goods—they are sophisticated and customized video streaming products, methods, and systems.

Plaintiff provides the following example claim charts based on currently available information, including through public sources. Plaintiff reserves the right to modify, amend, or supplement these claim charts should it become aware of additional information regarding the Accused Products and systems, including through discovery, or should one or more claims be construed in a manner differently than interpreted herein.

I. CLAIM CHARTS

1. Independent Claim 19

Key Features	Accused Product
19. A system for providing a first plurality of copies of a first live stream of digital content relating to a first live sporting event to a first plurality of viewer client devices, and for providing a second plurality of copies of a second live stream of digital content relating to a second live sporting event to a second plurality of viewer client devices, the system comprising:	Sportradar Live Channel Trading, which is offered under their brand name Betradar, includes “<i>a system for providing a first plurality of copies of a first live stream of digital content relating to a first live sporting event to a first plurality of viewer client devices, and for providing a second plurality of copies of a second live stream of digital content relating to a second live sporting event to a second plurality of viewer client devices.</i>” For example, Sportradar live channel trading provides videos, including live videos to traders, integrated with a trading environment. Multiple live events are streamed to multiple clients.

As shown below, an active connection to the customer is maintained even when no data is provided, e.g., using a heartbeat message every 5 seconds.

Key Features	Accused Product
	Push Feeds Some of our APIs include Push feeds that allow you to get updates as soon as they are available. <u>Push API feeds automatically send JSON payload to you via a push service, and can dramatically reduce the number of calls you need to make to our RESTful API feeds.</u> The structure of the Push feeds are similar to the structure of the corresponding RESTful API feed (i.e. Push Events, and Push Statistics). The push service ensures reliable and efficient delivery of the most up to date information. Our Push services are based on a HTTP publish/subscribe model. When making a call to the Push APIs, you "subscribe" to various data feeds provided by our service; whenever new content is available on one of those feeds, <u>the server pushes that information out to your client.</u> <u>When no new information is available on the feed, a heartbeat message is sent every 5 seconds to keep the connection active.</u> If you want to filter the results of the feeds, there are several optional query string parameters that can be applied to the API call. If left unfiltered, all data for the feed is displayed (i.e. all games, events, or statistics). <i>See, PANDA-SR_000118 at PANDA-SR_000151, https://developer.sportradar.com/docs/read/american_football/NFL_v7#weekly-depth-charts</i> For your applications to accept data from our Push feeds, ensure that your application can: • Can follow a HTTP redirect or use the location provided in the feeds header within one minute of your initial request. • Can accept HTTP data transfer encoded as chunked. Our Push service does not provide a "stateful session", there is no memory of what data has been sent previously. If you are disconnected from the Push session, you can use the RESTful API to catch up or recover from the disconnection.

Underpinned by the largest network of data journalists in the world

Every game produces thousands of data points. To collect them, you need two things: a highly qualified data journalist, and ultra-reliable software. We have both: which is why we're constantly setting, and pushing, the standard when it comes to selection, training and quality control.

As shown, Sportradar Live channel trading's live data intelligence provides game statistics and play-by-play action as well as real-time analysis of data streams from sporting events. Sportradar distributes live

video from a vast array of rights holders to betting operators around the world. Customers receive this intelligence as data feeds that integrate into their applications or betting systems or as live video streams distributed over internet protocol (IP) networks.

LIVE CHANNEL TRADING

Traders are only as good as the information they're working with

So give yours the quickest streams, using the fastest available signal, so they'll always outpace the competition. You'll get the top US leagues (NBA, MLB, NHL) and much more through ultra-low latency streams.

All matches in this offering are transmitted via our in-house developed Video Delivery Network (VDN), a renowned back-end live video streaming system that provides audiovisual game feeds up to eight seconds faster than any TV broadcaster. Use Live Channel Trading in combination with the Live Channel Online, or our data solutions, and benefit to the fullest.
