Mechanical Engineer

Sep 2011 - Aug 2013 · 2 yrs

Successfully implemented the FDA's new Unique Device Identifier (UDI) regulatory requirements into the BLU-U device. I became the subject matter expert (SME) at DUSA of the FDA's new requirement and how it would affect our product. Coordinated with our contract manufacturers in streamlining the implementation of this requirement so that we would be in compliance before the FDA due date (Class I device, August 2014).

Responsible for all aspects of successfully bringing the company's product line into compliance with IEC 60601-1:2005 (3rd edition) and 60601-2-57:2011. Negotiated with registrar; created gap analysis; remediation and systems assessment/certification to current requirements.

Manage Contract Manufacturers and Vendors to ensure proper manufacturing, fabrication and processing to specifications of component parts, product/systems and delivery of prototype and production components.

Recommendations

Received Given

Maria Russotti

PhD Candidate at Vanderbilt University
May 17, 2024, Maria reported directly to Brian

I worked for Brian during my summer internship at Takeda Pharmaceuticals. Brian has strong leadership qualities and is dedicated to fostering growth and development within his team. His approachability, willingness to listen, and ability to turn challenges into valuable learning opportunities was very helpful during my time there. He encouraged me to think critically and creatively, pushing me to explore innovative approaches to achieve my goals, all while gaining invaluable skills and insights along the way. He would make an excellent asset at any company.

Mark C.

Consultant for Medical Device, Pharmaceutical, and Combination Products
September 10, 2018, Mark was senior to Brian but didn't manage Brian directly

Brian is a seasoned well-rounded engineer who can make significant contributions in design, IP generation, advanced prototyping, automated test fixtures, tech transfer, etc. He is collaborative and focused on individual/team goals and objectives. When unplanned requirements hit, you can look to Brian for his effective and timely problem solving skills. In fact, he is continually willing to realign to accommodate unforeseen requirements. Regardless of his situation, he remains positive and embraces new directives.
