FILE 231/405

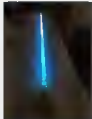

COMPLETELY CLEAR/UNCOATED SYLVANIA 28W T5 HE DEMONSTRATION TUBE

this is a tube that was very kindly given to me by James many years ago!

I realised I have never uploaded a picture of it however so I figured I would dig it out of storage and attempt to light it

its quite the sight to behold!, but sadly both electrodes on this tube are broken, however they are each attached to 1 electrode lead still so with careful selection of which pins I apply power to, I can light the tube safely, however I do worry that one of the cathodes may detach completely, which is another reason I got it out and lit it, so I could enjoy it before that happened!

as due to the broken cathodes, I have never really been able to light it before now (most normal T5 ballasts wont light a lamp with broken cathodes sadly) so here im using US instant start ballast on its lowest power setting to run the tube, and I made sure to carefully monitor the tube voltage and current with my oscilloscope!

LIGHT INFORMATION

Manufacturer:	Sylvania
Model Reference:	FHE28W/T5/860
Lamp:	
Lamp Type:	"fluorescent" tube
Base:	G5
Shape/Finish:	T5
Electrical:	
Wattage:	28W
Physical/Production:	
Factory Location:	Germany

Is this a demonstration tube or a germicidal lamp?

I'm don't speak English well, and rely on online translating to write in this site.
Please forgive me if my choice of my words looks like offensive, while that isn't my intention.

I only working with the international date format (dd.mm.yyyy).

I lives in Israel, which is a 220-240V, 50hz country

Mar 13, 2022 at 12:09 PM

Faraday dark Space is very noticeable here.

Mar 13, 2022 at 01:00 PM

That is quite neat. I'd love to get hold of a half or uncoated lamp and get some nice macro shots of the electrodes when lit.

Bulbs are for planting. Lamps are for lighting!

Is this a demonstration tube or a germicidal lamp?

It's in the title 😊

Mar 13, 2022 at 01:02 PM

Yeah that would be awesome!

I have 1 4ft 40W T12 half coater in the collection, (which I was offered some very nice lamps for recently in-fact, but I am never parting with it as I know the chances of me getting/finding another is roughly nil)

My other hobby is buses, especially the Routemaster (formerly Bulb Freak)

Mar 13, 2022 at 01:04 PM

I'd love a half-coated tube. Or better still, an MV lamp like [this one](#) 🙏

Mar 13, 2022 at 01:04 PM

I might just have to get a germicidal TS heh

Bulbs are for planting. Lamps are for lighting!

Cool 😊

(still have y'all to find clear version of linear fluorescent light bulb (not the germicidal kind))

Pretty, please no more Chinese failure.

ee

I might just have to get a germicidal T8 heh.

Just be careful with the UVC exposure. Demo tubes use regular glass, which blocks UVC and germicidals use quartz.

Mar 14, 2022 at 03:42 PM

That looks great. I have a 28w actinic blue T5 HE in a fixture under my kitchen eating bar as an accent light...it would look even better if it were a clear lamp. I think. But the color is fairly similar

I'm lampin'...
