Petitioners’ most recent amended *Sotera* stipulation (EX1055) demonstrates Petitioners’ commitment to ensuring that this proceeding will *not* be a true alternative to the litigation. *See Motorola Solutions v. Stellar*, IPR2024-01205, Paper 19 at 3-4 (PTAB Mar. 28, 2025) (“Petitioner’s [*Sotera*] stipulation does not ensure that these IPR proceedings would be a ‘true alternative’ to the district court proceeding.”). Despite now having two opportunities to amend its *Sotera* stipulation, Petitioners persist in their intention to assert system art in the district court case—and not simply a few system references. In the parallel district court litigation, Petitioners have subpoenaed nineteen companies and presently have at least *seventeen* system references in their invalidity contentions. As discussed in Patent Owner’s Discretionary Denial Brief, Petitioners’ invalidity contentions in the parallel district court litigation include at least three products (i.e., system prior art that cannot be raised in IPR) that Petitioners contend anticipate or render obvious all asserted claims of the ’162 Patent. *See* Paper 8, pp. 17-19. Thus, Petitioners demand two separate proceedings on invalidity: this IPR as well as a trial on a substantial number of system references (including combinations with printed publications that are not asserted in these proceedings). This is the antithesis of a “true alternative.”

Moreover, Petitioners’ second amended stipulation does not provide that Petitioners will not assert product or system prior art in combination with patent or printed publication prior art that it *could* have raised before the Board. *See* EX1055 (merely stating that Petitioners will not assert combinations of product art with printed publication prior art *asserted* in this IPR proceeding). Consequently,

Petitioner's invalidity arguments in the district court are more expansive and include combinations of the prior art that could have been asserted in these proceedings with unpublished system prior art, which Petitioner's stipulation will *not* moot.

Petitioners incorrectly argue that under their second amended stipulation “there will be no ‘overlap between issues raised in the petition and in the [Litigation]’” and that “concerns of inefficiency and the possibility of conflicting decisions” will be eliminated. *See* Paper 11, p. 2. To begin with, deciding issues of validity necessarily involve interpreting the claims and resolving claim construction issues. As discussed in Patent Owner's Discretionary Denial Brief, claim construction proceedings will begin shortly in the parallel district court litigation and will be decided well before a final decision in this case. *See* Paper 8, pp. 13-14. Petitioners' second amended stipulation does not eliminate the inefficiency of conducting multiple claim construction proceedings in front of multiple tribunals or the potential of conflicting claim construction decisions. Additionally, it would be far more efficient to conduct a single trial in front of a single tribunal that resolves *all* validity issues (i.e., a district court trial that resolves validity based on product/system art as well as printed publications and patents) rather than requiring validity to be considered twice, first in district proceedings and then again in *inter partes* review proceedings.

For the reasons discussed above, *Fintiv* Factor 4, which considers concerns of inefficiency and the possibility of conflicting decisions, weighs in favor of discretionary denial.
