UNITED STATES DISTRICT COURT

NORTHERN DISTRICT OF CALIFORNIA

SAN JOSE DIVISION

MAXELL, LTD., Plaintiff, v. LG ELECTRONICS INC., LG ELECTRONICS U.S.A. INC. Defendants.	Case No. 5:24-cv-04972-EKL-SVK Hon. Judge Eumi K. Lee **DEFENDANTS' INVALIDITY CONTENTIONS**

Maxell, Ltd.
Ex. 2005
Page 1 of 431

Pursuant to Patent L.R. 3-3, Defendants LG Electronics Inc. and LG Electronics U.S.A., Inc. (collectively, "Defendants" or "LG") provide the following Invalidity Contentions for U.S. Patent Nos.:

- 6,856,760 (the "'760 patent")
- 6,973,334 (the "'334 patent")
- 7,199,821 (the "'821 patent")
- 7,421,188 (the "'188 patent")
- 8,339,493 (the "'493 patent")
- 8,736,729 (the "'729 patent")
- 9,818,449 (the "'449 patent")
- 10,199,072 (the "'072 patent")
- 10,244,284 (the "'284 patent")

Together, these patents are defined as the "Patents-in-Suit" or "Asserted Patents." As of the date of these contentions, Plaintiff Maxell, Ltd. ("Maxell" or "Plaintiff") has asserted the following claims (the "Asserted Claims") of the Patents-in-Suit against LG:

Patent	Asserted Claims
'760 patent	4, 6, 7, 9
'334 patent	4, 6
'821 patent	6
'188 patent	4-6
'493 patent	10, 12-14
'729 patent	3-4
'449 patent	9-12
'072 patent	11-15
'284 patent	18-20

LG provides these Invalidity Contentions for only the Asserted Claims that Plaintiff has identified in its Patent L.R. 3-1 Disclosure of Asserted Claims and Infringement Contentions ("Infringement Contentions"). Defendants' exclusion from these Invalidity Contentions of patent

Maxell, Ltd.
Ex. 2005
Page 2 of 431

claims that Plaintiff has not asserted in its Infringement Contentions is not an admission that those unasserted patent claims are valid. Defendants reserve the right to amend and supplement these Invalidity Contentions in the event that Plaintiff is permitted to later assert any of those currently-unasserted claims by way of amendment or supplementation of its Infringement Contentions.

Defendants expressly reserve the right to amend, correct, and/or supplement these Contentions in accordance with the Procedural Schedule governing these cases.

I. Introduction

A. Preliminary Statement

These Invalidity Contentions are based on information reasonably available to Defendants and of which Defendants are aware at this time. These are not, and are not intended to be, final statements or admissions.

This case is still at an early stage. Discovery has just begun, the Court has not issued its claim construction order, and Plaintiff has so far provided little information and few documents in discovery. Defendants' investigations and discovery into third party sources of prior art are also underway. Defendants reserve all rights to amend, modify, or supplement these contentions: based on information learned through further investigation or discovery following the date of these Invalidity Contentions; in view of Court's construction of the Asserted Claims; in response to any findings as to the priority date of the Asserted Claims; in reaction to positions that Plaintiff or expert witness(es) may take concerning claim construction, infringement, and/or invalidity issues; in response to any disclosure by Plaintiff of amended or supplemental infringement contentions; if Defendants become aware of additional prior art, become aware of additional features of the prior art references cited below, or become aware of any other relevant information through discovery, including non-party discovery, or otherwise; and for any other proper reason. For the avoidance of doubt, Defendants reserve the right to amend these contentions based on further discovery or Court rulings (or any other related reason), including, for instance, the issuance of subpoenas to third parties believed to have knowledge, documentation, and/or corroborating evidence concerning some of the prior art listed below and/or additional prior art. These third parties may include, without limitation, any relevant authors, inventors, developers, designers,

Maxell, Ltd.
Ex. 2005
Page 3 of 431

corporate designees with knowledge, or assignees.

In providing these Invalidity Contentions, Defendants have exceeded the level of detail required by the local rules. By providing such detail, Defendants do not concede that such detail is required or that the omission of similar detail in other areas is a deficiency. Thus, the inclusion of specific detail with respect to some aspects of these Invalidity Contentions does not prejudice any other aspects as to which less detail has been included.

In addition to the charts attached hereto, Defendants expressly incorporate by reference, as if expressly set forth in these Contentions, all invalidity positions, prior art, and claim charts asserted against Plaintiff in any Maxell lawsuit or IPR proceeding by any defendants, prior defendants, petitioners, and potential or actual licensees to the Asserted Patents.

B. General Reservations

These Invalidity Contentions reflect information currently known to Defendants based on their investigation to date. Defendants reserve the right to further revise, supplement, and amend their Invalidity Contentions, including by identifying, charting, and relying on additional references, or by identifying additional or different disclosures in the references identified herein.

The references disclosed herein and discussed in the claim charts attached hereto may disclose the limitations of the Asserted Claims explicitly, implicitly, or inherently, or they may be relied upon to show the state of the art as of the relevant time. The claim charts cite particular teachings and disclosures of the prior art as applied to features of the Asserted Claims. However, persons having ordinary skill in the art generally may view an item of prior art in the context of other publications, literature, products, and understanding. Accordingly, the cited portions are only examples, and Defendants' citations to disclosures in any particular prior art reference are not (and are not intended to be) exhaustive but rather illustrative. Defendants therefore reserve their right to rely on uncited portions of the prior art references and on other publications and expert testimony as aids in understanding and interpreting the cited portions, as providing context, thereto, as additional evidence that the prior art discloses a claim limitation, as evidence of the state of the art at a particular time, as evidence of the obviousness factor of contemporaneous development by others, and as evidence of motivation to combine. Defendants further reserve the

Maxell, Ltd.
Ex. 2005
Page 4 of 431

right to rely on uncited portions of the prior art references, other publications, and testimony (including expert testimony) to establish bases for combinations of certain cited references that render the claims obvious.

Defendants' obviousness contentions and combinations are provided in the alternative to their anticipation contentions and are not to be construed to imply that any prior art reference included in the combinations is not by itself anticipatory. Defendants may present obviousness contentions and combinations in addition and as an alternative to an assertion of anticipation.

Prior art not included in this disclosure, whether known or not known to Defendants, may become relevant. In particular, Defendants are currently unaware of the extent, if any, to which Plaintiff will contend that limitations of the Asserted Claims are not disclosed in the prior art identified by Defendants. To the extent that such an issue arises, Defendants reserve the right to identify additional teachings in the same references or in other references that anticipate or would have made the addition of the allegedly missing limitation obvious.

Defendants also reserve the right to rely upon any documentary or testimonial evidence of the existence of any systems that embodied or practiced the disclosures found in the accompanying invalidity charts, for example as discussed in the prior art references cited herein, as such systems may qualify as prior art under 35 U.S.C. § 102(g).[1]

Defendants base these Invalidity Contentions on their current knowledge and understanding of the Asserted Patents, Plaintiff's Infringement Contentions, and the other facts and information available as of the date of these Invalidity Contentions. Defendants' investigation and analysis of the prior art remains ongoing, including of prior art identified in these disclosures or not yet known to Defendants, of third-party prior art, and of related evidence, documents, information, and witnesses. In particular, Defendants may seek third-party discovery related to the prior art, including documents and testimony related to the prior art. Defendants also have not yet deposed the inventors of the Asserted Patents, and discovery remains ongoing for these patents. Defendants may therefore amend their Invalidity Contentions upon receipt of additional discovery from Plaintiff or third parties and as Defendants' own investigation and analysis continues.

[1] Citations herein refer to the pre-AIA version of Title 35 of the U.S. Code.

Maxell, Ltd.
Ex. 2005
Page 5 of 431

For the avoidance of doubt, Defendants intend to rely on admissions concerning the scope of the prior art relevant to the Asserted Patents found in, *inter alia*: the patent prosecution histories for the Asserted Patents and related patents and/or patent applications (including all prior art cited therein); any deposition testimony of the named inventors on the Asserted Patents and related patents and/or patent applications in this matter or any other matter; evidence and testimony relating to the level of skill in the art; and the papers filed and any evidence submitted by Maxell in connection with this matter.

C. Plaintiff's Inadequate Pat. L.R. 3-1 and 3-2 Disclosures

Defendants provide these Invalidity Contentions consistent with the schedule set forth in the Court's December 5, 2024 Order (ECF No. 118), but do so without waiving any right to receive from Plaintiff full, complete and detailed infringement disclosures as required under Pat. L.R. 3-1 and 3-2. Defendants' compliance with the schedule currently in place should not be viewed as a waiver of their right to seek relief regarding the deficiencies in Plaintiff's disclosures.

Plaintiff's Infringement Contentions are deficient in numerous respects. For example, Plaintiff's Infringement Contentions lack the specificity required under Pat. L.R. 3-1 that would be necessary to fairly provide Defendants notice of Plaintiff's theories, including without limitation: (1) Plaintiff fails to provide claim charts for each Accused Product, as shown by Plaintiff's Appendix 10 to its Infringement Contentions accusing at least 125 mobile products and 165 laptops, but providing no more than 9 total claim charts across 9 patents; (2) Plaintiff fails to support, with specificity and supporting documentary or declaratory evidence, its assertions that there are no material differences between the Accused Products that affect its infringement theories for the uncharted products; and (3) Plaintiff fails to identify where each element of each asserted claim is found within each Accused Instrumentality. Defendants incorporate by reference the letter from Bailey Benedict to Michael Molano, dated January 28, 2025, regarding Plaintiff's deficient Infringement Contentions.

Defendants specifically reserve the right to modify, amend, or supplement their Invalidity Contentions should Plaintiff be permitted to further modify, amend, or supplement its Pat L.R. 3-1 and 3-2 disclosures or produce documents responsive to Defendants' discovery requests.

Maxell, Ltd.
Ex. 2005
Page 6 of 431

D. Priority Applications / Priority Date of Asserted Claims

These Invalidity Contentions, including but not limited to identification of prior art, rely in part on Plaintiff's contention that the Patents-in-Suit are entitled to the following claim(s) of priority, according to Plaintiff's disclosure pursuant to Patent L.R. 3-1(f):

- U.S. Patent No. 6,856,760 allegedly claims a priority date of July 5, 1999, based upon foreign application JP P11-189868.
- U.S. Patent No. 6,973,334 allegedly claims a priority date of November 10, 1998, based upon foreign application JP P10-318689.
- U.S. Patent No. 7,199,821 allegedly claims a priority date of February 27, 2002, based upon foreign application JP 2002-051841.
- U.S. Patent No. 10,244,284 allegedly claims a priority date of November 28, 2007, based upon foreign application JP 2007-306750.
- U.S. Patent No. 8,339,493 allegedly claims a priority date of October 27, 1999, based upon U.S. Application No. 90/014,628 (supposedly based on a Supplemental Declaration Under 37 CFR 1.131 dated October 15, 2021).
- U.S. Patent No. 8,736,729 allegedly claims a priority date of October 27, 1999, based upon U.S. Application No. 90/014,628 (supposedly based on a Supplemental Declaration Under 37 CFR 1.131 dated October 15, 2021).
- U.S. Patent No. 7,421,188 allegedly claims a priority date of March 5, 2002, based upon foreign application JP 2002-107158.
- U.S. Patent No. 9,818,449 allegedly claims a priority date of December 2, 2004, based upon foreign application JP 2004-349264.
- U.S. Patent No. 10,199,072 allegedly claims a priority date of December 2, 2004, based upon foreign application JP 2004-349264.

For the avoidance of doubt, Defendants dispute all of Plaintiff's claims of priority, and the use of Plaintiff's asserted priority dates is not an admission that these dates are correct and/or that the claims of priority are valid. For the sole purpose of providing these Invalidity Contentions, Defendants assume, under objection, that the Asserted Claims may benefit from Plaintiff's asserted

Maxell, Ltd.
Ex. 2005
Page 7 of 431

priority dates. Given Defendants' prior art, Plaintiff's asserted priority dates cannot avoid invalidity.

Defendants, however, reserve the right to amend these Invalidity Contentions to the extent that Plaintiff is permitted to claim priority to an earlier application, assert an earlier conception or reduction to practice date than the priority application filing date, changes its alleged priority dates, or if the Court determines that any of the Patents-in-Suit are not entitled to claim priority to the earlier applications as asserted by Plaintiff.

E. Claim Construction

These Contentions are not intended to include or otherwise reflect Defendants' claim interpretations. Because the Court has not yet construed any of the claims in this litigation, Defendants base these Contentions at least on their present understanding of Plaintiff's view and Plaintiff's application of the claim scope of the Asserted Claims, to the extent that view can be inferred from Plaintiff's actual and/or apparent application of those claims. In other words, Defendants' Invalidity Contentions have, at least in part, relied upon Plaintiff's apparent claim construction positions as set forth in Plaintiff's Infringement Contentions, because the same claim scope must apply for both infringement and invalidity. However, Plaintiff's Infringement Contentions at times contradict the teachings of the Patents-In-Suit, contradict the meaning of the claim terms as would have been understood by a person of ordinary skill in the art, are internally inconsistent, and/or are vague and conclusory concerning how the claim limitations supposedly read on the Accused Products. As a result, Defendants are currently unable to fully discern Plaintiff's complete position regarding the construction of the claim limitations or terms. To the extent that Plaintiff supplements or amends its Infringement Contentions, Defendants reserve the right to modify, amend, and/or supplement these Invalidity Contentions.

By relying on Plaintiff's apparent claim construction positions as set forth in Plaintiff's Infringement Contentions, Defendants do not thereby implicitly or explicitly agree with Plaintiff's implicit or explicit construction(s) of the Asserted Claims. Nothing stated herein shall be construed as an admission or a waiver of any particular construction of any claim term or as an admission that Defendants agree with Plaintiff's apparent interpretation of the claims. For

Maxell, Ltd.
Ex. 2005
Page 8 of 431

example, to the extent that Defendants assert that prior art is anticipatory or renders obvious claims based on the construction apparently applied by Plaintiff to the Asserted Claims, the Invalidity Contentions are not—and should not be interpreted as—adoptions or admissions as to the accuracy of that scope or construction.

Further, nothing stated herein shall be construed as a waiver of Defendants' right to challenge the Court's claim constructions on appeal on any basis. These Invalidity Contentions are not, and shall not be used as, evidence of Defendants' claim construction positions or contentions. Defendants' Contentions may even reflect alternative positions as to claim construction and scope.

By providing these Contentions, Defendants are not waiving nor limiting their rights to make arguments in the future about the proper scope of the claims or to advance alternative constructions to those Plaintiff advocates. Defendants expressly reserve the right to argue for narrower claim constructions during this litigation and to supplement these Contentions after the Court has issued a claim construction ruling.

Furthermore, nothing in these Invalidity Contentions shall be treated as an admission that Defendants' accused products meet any limitation of the Asserted Claims. References to the preamble of a claim in these Invalidity Contentions are not an admission that the preamble is, in fact, a limitation of a claim.

For the purposes of these Contentions, Defendants have made assumptions regarding possible meanings of indefinite claim terms. By making these assumptions, Defendants do not admit that any claim language satisfies 35 U.S.C. § 112. Similarly, the use of asserted claim terms herein should not be understood to mean that such terms, as used in the Asserted Patents or Asserted Claims, are definite or otherwise comply with the conditions of patentability under 35 U.S.C. § 112. Likewise, the use of any terms in any Asserted Claims should not be understood to suggest or imply a common, usual, ordinary, customary, plain, or accepted meaning in the art for any such terms.

Defendants reserve all rights to disclose new or supplemental invalidity contentions, including to address any construction of the claims rendered by the Court, changed theories of

Maxell, Ltd.
Ex. 2005
Page 9 of 431

infringement, and any newly discovered evidence obtained through continued discovery, both formal and informal.

Unless otherwise stated herein, Defendants therefore takes no position on any matter of claim construction in these Invalidity Contentions. Defendants reserve the right to propose any claim construction they consider appropriate and to contest any claim construction they consider inappropriate. Because of the uncertainty of claim construction, Defendants reserve the right to further supplement or modify the positions and information in these Invalidity Contentions, including, without limitation, the prior art and grounds of invalidity set forth herein, after the Asserted Claims have been construed, in accordance with the Patent Rules and the Court's Orders.

F. Doctrine of Equivalents

Plaintiff has provided insufficient contentions regarding its allegations of infringement under the doctrine of equivalents. Plaintiff has not sufficiently provided any contentions that identify the basis for Plaintiff's position regarding each limitation allegedly infringed under the doctrine of equivalents and its alleged equivalent element in the accused products. Should leave to amend be granted to Plaintiff to add to its contentions any specific allegations of infringement under the doctrine of equivalents, Defendants reserve the right to amend or supplement these Invalidity Contentions as appropriate.

G. Ongoing Discovery and Disclosures

Discovery in this case and Defendants' investigation, including Defendants' search for prior art, are ongoing. Some of the relevant prior art and other information is in the possession of third parties, and Defendants are in the process of seeking discovery related to such prior art. For example, Defendant intends to subpoena or otherwise seek discovery from third parties regarding the prior art systems identified in these Invalidity Contentions, in addition to other systems that may be related to the Patents-In-Suit and printed publication references disclosed in these Invalidity Contentions. Defendants expressly reserve the right to amend or modify these Invalidity Contentions based on additional information obtained through continued formal discovery or other means pursuant to Fed. R. Civ. P. 26(e).

Maxell, Ltd.
Ex. 2005
Page 10 of 431

Defendants further reserve the right to revise, amend, or supplement these Contentions, including by identifying, charting, and relying on additional information, references, systems, and devices, should Defendants' further search and analysis yield additional information, references, systems, or devices, consistent with the Local Patent Rules and the Federal Rules of Civil Procedure. In addition, Defendants reserve the right to supplement, amend, and/or alter the positions taken and information disclosed in these Invalidity Contentions including, without limitation, the prior art and grounds of invalidity set forth herein under 35 U.S.C. §§ 101, 102, 103 or 112, to take into account information or defenses that may come to light as a result of Defendants' discovery efforts; additional information obtained as to the alleged priority date(s) of the Asserted Claims; testimony or documents produced by a party or non-party; and positions that Plaintiff may take concerning infringement or invalidity issues. For example, Defendants may seek further discovery from third parties believed to have knowledge, documentation, or corroborating evidence concerning prior art references, including prior art listed herein. Such third parties may include, without limitation, the authors, inventors, assignees, owners, or developers of the references and technologies listed in these disclosures. In particular, Defendants reserve the right to assert invalidity under pre-AIA 35 U.S.C § 102(c), (d), (f), or (g) to the extent that discovery or further investigation yields information forming the basis for such grounds for invalidity.

H. Additional Explanation and Reservations of Rights

The citations to the prior art provided in these contentions are intended to be exemplary, not exhaustive. Defendants have endeavored to cite to the most relevant portions of the identified prior art. Other portions of the identified prior art may additionally disclose, either expressly or inherently, and/or render obvious one or more elements or limitations of the asserted claims. Defendants reserve the right to rely on uncited portions of the identified prior art to establish invalidity. Moreover, Defendants reserve the right to rely on uncited portions of the identified prior art, other art, or expert testimony to provide context to or aid in understanding the cited portions of the identified prior art. Defendants also reserve the right to rely upon treatises,

Maxell, Ltd.
Ex. 2005
Page 11 of 431

published industry standards and similar documents to demonstrate the knowledge of one of ordinary skill in the relevant art.

Defendants further reserve the right to rely upon prior art cited in the file histories of the Patents-In-Suit and related patent applications, including post-issuance proceedings, as invalidating references or to show the state of the art. Defendants also reserve the right to rely upon additional prior art to show the state of the art. Defendants further intend to rely on inventor admissions, and admissions by Plaintiff and others providing testimony on behalf of Plaintiff (e.g., experts or inventors), concerning the scope of the prior art relevant to the Patents-In-Suit found in, *inter alia*: the patent prosecution history for the Patents-In-Suit and any related patents or patent applications, including post-issuance proceedings; any deposition testimony of the named inventors of the Patents-In-Suit; and the papers filed and any evidence submitted by Plaintiff in connection with this litigation, prior litigations, and other proceedings involving the Patents-in-Suit. Hence, Defendants incorporate by reference the relevant testimony of any witnesses who are deposed, provide declarations, or otherwise testify in this lawsuit.

Moreover, Defendants' IPR proceedings are part of the file histories of the Patents-in-Suit and Plaintiff should be estopped from taking positions in this Court contrary to positions it takes before the Patent Trial and Appeals Board. Defendants thus incorporate by reference the declaration(s), report(s) and testimony of any expert witnesses regarding invalidity of the Patents-In-Suit, either here or at the Patent Trial and Appeals Board.

Defendants' factual investigations, including their investigation of prior art and grounds for invalidity, is ongoing. Further, the Defendants' invalidity positions will be the subject of expert testimony. The Defendants reserve the right to supplement these Contentions, including, without limitation, adding additional prior art and grounds of invalidity in accordance with the Federal Rules of Civil Procedure and Procedural Schedule in these cases, or otherwise.

* * * * *

Subject to the foregoing statements and qualifications, as well as all rights reserved in these Contentions, Defendants state that all of the Asserted Claims are invalid under at least one or more of 35 U.S.C. §§ 101, 102, 103, and/or 112.

Maxell, Ltd.
Ex. 2005
Page 12 of 431

II. Identification of Prior Art under pre-AIA 35 U.S.C. §§ 102 and/or 103

The Asserted Claims are invalid because they are anticipated and/or rendered obvious under 35 U.S.C. §§ 102 and 103. If Plaintiff contends or a fact-finder finds that one or more limitations of the Asserted Claims are not disclosed in the prior art identified as anticipatory, Defendants reserve the right to assert obviousness based on the identified references and/or to identify other references that would have rendered obvious the allegedly missing limitation. Furthermore, the obviousness combinations of references provided below and in the accompanying claim charts under 35 U.S.C. § 103 are exemplary only and are not intended to be exhaustive. If Plaintiff challenges the disclosure of any of these references with respect to particular limitations of the Asserted Claims, Defendants reserve the right to supplement these Contentions to assert additional or different bases for obviousness. Defendants reserve the right to use any combination of the references set forth in these contentions to demonstrate the obviousness of the Asserted Claims.

Defendants further incorporate by reference all invalidity positions presented in their filed IPR petitions (including IPR2025-00392; IPR2025-00393; IPR2025-00394; IPR2025-00444; IPR2025-00518; IPR2025-00519; and IPR2025-00520), and any other *inter partes* petition(s) that have been filed or may be filed against any of the Asserted Patents.

Subject to the foregoing statements and qualifications, Defendants identify the prior art in the tables below and in Exhibits A-01 through I-14, that anticipate and/or render obvious one or more of the asserted claims.

Patent	Claim Charts
’760 patent	Exhibits A-01 – A-17
’334 patent	Exhibits B-01 – B-15
’821 patent	Exhibits C-01 – C-11
’188 patent	Exhibits D-01 – D-11
’493 patent	Exhibits E-01 – E-13
’729 patent	Exhibits F-01 – F-15

Maxell, Ltd.
Ex. 2005
Page 13 of 431

Patent	Claim Charts
’449 patent	Exhibits G-01 – G-14
’072 patent	Exhibits H-01 – H-13
’284 patent	Exhibits I-01 – I-14

Each prior art reference identified in Exhibits A-01 through I-14 expressly, implicitly, or inherently anticipates or renders obvious one or more of the claims of the Patents-in-Suit, either alone or in combination with other prior art references (including, without limitation, the references disclosed in in Exhibits A-01 through I-14) and/or the knowledge of those of ordinary skill in the art at the time of the alleged invention.

Additional anticipatory references and obviousness combinations are possible, and Defendants reserve the right to identify any such additional references or use any such additional combinations. In particular, Defendants are unaware of the extent, if any, to which Plaintiff will contend that the claim limitations are not met by the prior art identified by Defendants, or to which Plaintiff will contend that certain prior art references cannot or would not be combined. To the extent that an issue arises with any such limitation, elements, or combinations, Defendants reserve the right to identify other prior art references, disclosures, or combinations that would have made obvious the addition of the allegedly missing claim limitation.

Defendants reserve the right to assert that the Asserted Claims are invalid under 35 U.S.C. § 102(f) in the event Defendants obtain additional evidence that the inventor(s) named in any of the Asserted Patents did not invent the subject matter claimed therein. Should Defendants obtain such evidence, it will provide the name of the person(s) from whom and the circumstances under which the alleged invention or any part of it was derived.

A. Prior Art Patents

Pursuant to Patent L.R. 3-3(a), the table below identifies the prior art patents that Defendants presently assert anticipate and/or render obvious the Asserted Claims of one or more of the Asserted Patents.

B. Prior Art Publications

Pursuant to Patent L.R. 3-3(a), the table below identifies the prior art patents that

Maxell, Ltd.
Ex. 2005
Page 24 of 431

Defendants presently assert anticipate and/or render obvious the Asserted Claims of one or more of the Asserted Patents.

Title, Publisher	Author	Date of Publication
3GPP; Technical Specification Group TSG SA; Requirements for service continuity between mobile and WLAN networks; (Release 8) V1.0.0	3GPP	Aug. 2007
A 'Pile' Metaphor for Supporting Casual Organization of Information, SIGCHI Conf. on Human Factors in Computing Systems	Mander	May 1992
A Cooperative Game Framework for Bandwidth Allocation in 4G Heterogeneous Wireless Networks, IEEE International Conference on Communications	Niyato	2006
A Digital Video Camera System, IEEE Transactions on Consumer Electronics, Vol. 36, No. 4	Morimura	Nov. 1990
A Dual Mode Digital Camera for Digital Still Imaging and Video Conferencing, Int'l 1998 Conference on Consumer Electronics	Metz	June 1998
A Family of Digital Cameras Using Still Optimized Sensors, J. Soc. Photogr. Sci. Technol. Japan, Vol. 59, No.1	Parulski	1996
A Flexible Content and Context-based Access Control Model for Multimedia Medical Image Database Systems, 4th Workshop on Multimedia & Security: New Challenges	Tzelepi	2001
A High Resolution CCD Camera for Scientific and Industrial Imaging Applications, SPIE Vol. 818	Martin	1987
A Low-Cost Megapixel Digital Camera Using High-Performance In-Camera Image Processing, IS&T 1998 PICS Conference	Dunsmore	1998
A Multi-service Architecture to Support Mobile IP Applications over Heterogeneous Wireless Networks, IEEE 2003	IEEE	2003
A Technique for the Maintenance of FET Power Amplifier Efficiency Under Backoff, IEEE MTT-S International Microwave Symposium Digest	Geller	June 1998
A Tour Through Cedar, IEEE Software Vol. 1, No. 2	Teitelman	1984
A Triple-Standard Transceiver Architecture For GSM, WCDMA and Wi-Fi Applications, 2005 12th IEEE International Conference on Electronics, Circuits and Systems	Zhang	Dec. 2005
A Utility-Based Network Selection Scheme for Multiple Services in Heterogeneous Networks, 2005 Int'l Conf. on Wireless Networks, Communications and Mobile Computing	Chan	2005

Maxell, Ltd.
Ex. 2005
Page 25 of 431

Title, Publisher	Author	Date of Publication
A VLSI Implementation of Dual AC-3 And MPEG-2 Audio Decoder, IEEE International Conference on Consumer Electronics	Ko	Aug. 1998
ACDSee PowerPack User Guide	ACD Systems	Apr. 25, 2001
Advanced Configuration and Power Interface Specification, Rev. 1.0b	Intel	Feb. 2, 1999
AE, AWB Function for Video Printer, Institute of Image Information and Television Engineers	Sugimori	1991
Agfa ePhoto 1280 User Guide	Agfa	1997
An Analysis of CDMA with Imperfect Power Control, Dept. of EE, Virginia Polytechnic Institute and State University	Cameron	1992
Apple TV (1st Gen) Release Information	Apple	Jan. 9, 2007
Automatic White Balance for Digital Still Camera, Dept. of Comp. Sci. and Info. Engineering, National Taiwan University	Chiou	2000
Automatic White Balance for Digital Still Camera, IEEE Transactions on Consumer Electronics, Vol. 41, No. 3	Liu	Aug. 1995
Canon Elura Digital Video Camcorder Instruction Manual	Canon	1999
Canon PowerShot A5 Digital Camera Reference Guide	Canon	1998
Canon PowerShot Pro70 Digital Camera Hardware Guide	Canon	1998
Canon XL1 Digital Video Camcorder Instruction Manual	Canon	1997
Case-Studies on the Evolution of the Personalized Electronic Program Guide, Personalized Digital Television, Kluwer	Smyth	2004
Casio QV-2000UX, 2000UX/lr Service Manual & Parts List Ver. 1	Casio	Dec. 1999
Casio QV-2000UX/lr LCD Digital Camera User's Guide	Casio	1997
Casio QV-8000SX Service Manual & Parts List Ver. 2	Casio	Oct. 1999
Casio QV-8000SX User Guide	Casio	Sept. 10, 1999
CDMA Reverse Link Open Loop Power Control, Globecom '92, Communications for Global Users, IEEE	Soliman	Dec. 1992
Challenges in Portable RF Transceiver Design, IEEE Circuits and Devices Mag. Vol. 12, Issue 5	Razavi	Sept. 1996
Color Segmentation as an Aid to White Balancing for Digital Still Cameras, Proceedings of SPIE Vol. 4300	Cooper	2001
Development of MPEG Camera, Hitachi Video & Information System Co. Ltd., 1997 IEEE	Kurashige	1997
Digital Cameras Go Mainstream, Photo Marketing Association Report	Miller	Apr. 1997

Maxell, Ltd.
Ex. 2005

Defendants reserve all rights to pursue additional discovery about the systems identified above and to supplement these Invalidity Contentions.

D. Exemplary Bases for Anticipation and/or Obviousness

Pursuant to Patent L.R. 3-3(b), the tables above identify prior art that anticipates the asserted claims expressly or inherently, or that in combination with the knowledge of one of ordinary skill in the art and/or in combination with other references renders the Asserted Claims obvious. The accompanying claim charts set forth the bases for anticipation and obviousness, including charts identifying where exemplary prior art reference disclose, alone or in combination

Maxell, Ltd.
Ex. 2005
Page 32 of 431

with other references, each element of each Asserted Claim on a limitation-by-limitation basis. In some instances, these conclusions are based on Plaintiff's apparent claim constructions, as reflected in its Infringement Contentions. To the extent that a reference or combination of references is found not to disclose an element of the claims, Defendants reserve all rights to combine an anticipatory reference or combination of references with the knowledge of one of ordinary skill in the art or any other reference cited in these Contentions.

Each of the prior art references disclosed in the preceding sections, in Exhibits A-01 through I-14, and/or in Defendants' accompanying document production may be combined with information known to persons skilled in the art at the time of the alleged invention or other such prior art references. Specific combinations of prior art, by way of example, are provided in Exhibits A-01 through I-14 and below in the Motivation to Combine section.

Defendants' claim charts are exemplary and are not intended to be exhaustive. Where Defendants identify a particular figure in a prior art reference, the identification should be understood to encompass the caption and description of the figure, as well as any text relating to the figure in addition to the figure itself. Similarly, where an identified portion of text refers to a figure or other material, the identification should be understood to include the referenced figure or other related material as well. It should be recognized that a person of ordinary skill in the art would generally read a prior art reference as a whole and in the context of other publications, literature, and general knowledge in the field. To understand and interpret any specific statement or disclosure in a prior art reference, a person of ordinary skill in the art would rely upon other information, including other publications and general scientific or engineering knowledge. Defendants therefore reserve the right to rely upon other unidentified portions of the prior art references and on other publications and expert testimony to provide context and to aid understanding and interpretation of the identified portions.

Defendants also reserve the right to rely upon other portions of the prior art references, other publications, and the testimony of experts to establish that the alleged inventions would have been obvious to a person of ordinary skill in the art, including the basis of modifying or combining certain cited references. To the extent any limitation is deemed not to be exactly met by an item

Maxell, Ltd.
Ex. 2005
Page 33 of 431

of prior art, then any purported differences are such that the claimed subject matter as a whole would have been obvious to one skilled in the art at the time of the alleged invention, in view of the state of the art and knowledge of those skilled in the art. To the extent that an element of an Asserted Claim is not anticipated, the claim is rendered obvious by combination with one or more other prior art references identified in Exhibits A-01 through I-14.

In addition, Defendants incorporate by reference each and every prior art reference or system identified or described in the prosecution of the Asserted Patents and related applications, including the statements made therein by the applicants, as well as the prior art discussed in the specification of each Asserted Patent. Defendants further incorporate by reference all invalidity positions presented in their filed IPR petitions (including IPR2025-00392; IPR2025-00393; IPR2025-00394; IPR2025-00444; IPR2025-00518; IPR2025-00519; and IPR2025-00520), and any other *inter partes* petition(s) that have been filed or may be filed against any of the Asserted Patents.

While Defendants herein provide notice of the prior art references that render obvious the Asserted Claims, including illustrative teachings, suggestions, and motivations to combine such references, Defendants reserve the right to provide more detailed discussions of the references and the corresponding motivations to combine in its forthcoming expert reports.

1. General and Exemplary Non-Limiting Motivations to Combine Applicable to All Patents

Although the Courts in the Northern District of California do not require Defendants to identify motivations to combine and although Defendants contend that no specific motivation to combine is necessary for the references cited herein and/or in the attached Exhibits, Defendants provide in this Section II.D, and its subsections such as this Subsection II.D.1, exemplary and non-limiting motivations to assist Plaintiff in understanding Defendants' asserted obviousness combinations. These exemplary discussions regarding obviousness are illustrative, and not intended to be exhaustive. The general and exemplary non-limiting motivations in this Subsection II.D.1 apply to all Asserted Patents, and are expressly incorporated into Subsections II.D.2-8 below. Because the identified motivations in Subsections II.D.1-8 (as well as elsewhere in this

Maxell, Ltd.
Ex. 2005
Page 34 of 431

document or the attached Exhibits) are illustrative, non-limiting, and only exemplary and because discovery is ongoing, Defendants reserve the right to identify additional and/or alternative motivations, to modify and/or revise motivations, and to withdraw and/or supplement any motivations, in their expert reports.

The U.S. Supreme Court decision in *KSR Int'l Co. v. Teleflex Inc.*, 127 S. Ct. 1727, 1739 (2007) ("*KSR*"), held that a claimed invention can be obvious even if there is no explicit, written teaching, suggestion, or motivation for combining the prior art to produce that invention. Accordingly, no showing of a specific motivation to combine prior art is required to combine the references disclosed in the attached charts, as each combination of art would have no unexpected results, and, at most, would simply represent a known alternative to one of ordinary skill in the art. *See KSR*, 127 S. Ct. at 1739-40 (rejecting the Federal Circuit's "rigid" application of the teaching, suggestion, or motivation to combine test, and instead espousing an "expansive and flexible" approach). The Supreme Court in *KSR* held that a person of ordinary skill in the art ("POSITA") is "a person of ordinary creativity, not an automaton" and "in many cases a person of ordinary skill in the art will be able to fit the teachings of multiple patents together like pieces of a puzzle." *Id.* at 1742. "In determining whether the subject matter of a patent claim is obvious, neither the particular motivation nor the avowed purpose of the patentee controls. What matters is the objective reach of the claim." *Id.* at 1741-42. "Under the correct analysis, any need or problem known in the field of endeavor at the time of invention and addressed by the patent can provide a reason for combining the elements in the manner claimed." *Id.* at 1742. In particular, the Supreme Court emphasized the principle that "[t]he combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable results." *Id.* at 1739. A key inquiry is whether the "improvement is more than the predictable use of prior art elements according to their established functions." *Id.* at 1740.

The rationale to combine or modify prior art references is significantly stronger when the references seek to solve the same problem, come from the same field, and correspond well. *In re Inland Steel Co.*, 265 F.3d 1354, 1362 (Fed. Cir. 2001). The Federal Circuit allowed two references to be combined as invalidating art when "[the prior art] focus[es] on the same problem

Maxell, Ltd.
Ex. 2005
Page 35 of 431

that the . . . patent addresses. . . . Moreover, both [prior art references] come from the same field. . . . Finally, the solutions to the identified problems found in the two references correspond well." *Id.* at 1364.

In *KSR*, the Supreme Court emphasized that inventions arising from ordinary innovation, ordinary skill, or common sense should not be patentable. *See generally KSR*, 127 S. Ct. 1727. Although a patent challenger is not required to show that one of ordinary skill in the art would have had a specific motivation to combine prior art references, such a showing may be helpful to the obviousness analysis. *Id.*

One of skill in the art would have been motivated to combine the references identified herein and in the accompanying claim charts attached as Exhibits because, for example, the identified combinations fall into one or more of the following categories:

- A combination of elements known in the prior art according to known methods to yield a predictable result;
- A combination that is a simple substitution of one or more known elements for another to obtain a predictable result;
- A combination that involves using a known technique to improve a similar device or method in the same way;
- A combination that involves applying a known technique to a known device or method ready for improvement to yield a predictable result;
- A combination that results from a finite number of identified, predictable solutions with a reasonable expectation of success, such that the solution was one which was "obvious to try";
- A combination that results from known work in one field of endeavor prompting variations of it for use either in the same field or a different field based on design incentives or other market forces in which the variations were predictable to one of ordinary skill in the art; and

Maxell, Ltd.
Ex. 2005
Page 36 of 431

- A teaching, suggestion, or motivation in the prior art that would have led one of ordinary skill in the art to modify the prior art reference or to combine the teachings of various prior art references to arrive at the claimed invention.

Further, the Federal Circuit has held that a motivation to combine references may be implicit for patents based on improvements:

> [A]n implicit motivation to combine exists not only when a suggestion may be gleaned from the prior art as a whole, but when the "improvement" is technology-independent and the combination of references results in a product or process that is more desirable, for example because it is stronger, cheaper, cleaner, faster, lighter, smaller, more durable, or more efficient. Because the desire to enhance commercial opportunities by improving a product or process is universal—and even commonsensical—we have held that there exists in these situations a motivation to combine prior art references even absent any hint of suggestion in the references themselves. In such situations, the proper question is whether the ordinary artisan possesses knowledge and skills rendering him capable of combining the prior art references.

DyStar Textilfarben GmbH & Co. Deutschland KG v. C.H. Patrick Co., 464 F.3d 1356, 1368 (Fed. Cir. 2006). The prior art references identified herein explicitly or implicitly refer to other prior art references, share common authors or inventors, were published in the same journals, presented at the same conferences, were presented as proposals to standards working groups, and/or were developed at common companies, schools, or organizations, all of which would motivate one of skill in the art to combine them. These references are also within the field of the Asserted Patents and are directed to similar subject matter within that field. Additionally, any products, devices, or processes described in the references existed and/or were invented before or during the period in which the claimed inventions were developed, providing further motivation to combine them.

Further, the motivations to combine the teachings of the prior art references disclosed herein are found in the references themselves and: the nature of the problem being solved; the express, implied and inherent teachings of the prior art; the knowledge of persons of ordinary skill in the art; the fact that the prior art is generally directed towards relevant methods and systems; or the predictable results obtained in combining the different elements of the prior art. The following seven non-limiting and exemplary motivations illustrate, without restricting, such motivations.

Maxell, Ltd.
Ex. 2005
Page 37 of 431

First, one of skill in the art would have been motivated to combine one or more of the references identified above with one another because they all relate to common objectives and subject matter. The references share commonalities in terms of their general subject matter, as well as the types of equipment, products, and/or approaches they describe. Moreover, a person of ordinary skill would have been motivated to combine the prior art based on the nature of the problem to be solved, the teachings of the prior art, and the knowledge of persons of ordinary skill in the art. The identified prior art addresses the same or similar technical issues and suggest the same or similar solutions to those issues.

Second, a person of ordinary skill in the art would have understood that the references identified above explicitly or implicitly reference other prior art references, share common authors or inventors, were published in the same journals, presented at the same trade shows, events, and conferences, were presented as proposals to standards working groups, and/or were developed at common companies, schools, or organizations, all of which would motivate one of skill in the art to combine them. A person of ordinary skill in the art would have been motivated to look to, and combine, the teachings of those references with one another.

Third, the references identified above are also within the same field of the Asserted Patents and are directed to similar subject matter within that field. Moreover, many of the references identified above relate more specifically to the same goals, as well as the same or similar approaches of working toward that goal. Additionally, any products, devices, features, designs, or processes described in the references existed and/or were invented before or during the period in which the claimed inventions were developed, providing further motivation to combine them.

Fourth, one or more combinations of the prior art references identified above with other prior art references above would have been obvious because these references would have been combined with one another using: known methods to yield predictable results; known techniques in the same way; a simple substitution of one known, equivalent element for another to obtain predictable results; and/or a teaching, suggestion, or motivation in the prior art generally. In addition, it would have been obvious to try combining the prior art references above because there were only a finite number of predictable solutions and/or because known work in one field of

Maxell, Ltd.
Ex. 2005
Page 38 of 431

endeavor prompted variations based on predictable design incentives and/or market forces either in the same field or a different one. In addition, the combination of prior art references identified above would have been obvious because the combinations represent known potential options with a reasonable expectation of success.

Fifth, additional evidence that there would have been a motivation to combine the prior art references identified above with one another includes, for example, the interrelated teachings of multiple prior art references; the effects of demands known to the design community or present in the marketplace; the existence of a known problem for which there was an obvious solution encompassed by the Asserted Claims; the existence of a known need or problem in the field of the endeavor at the time of the invention(s); and the background knowledge that would have been possessed by a person having ordinary skill in the art. For example, prior to the alleged priority date of the Asserted Patents, it was well known that there were market, business, and technical demands for the alleged inventions. It was also well known that there existed ways of achieving those goals and similar objectives. It was also well understood how to design systems to meet the above objectives. A skilled artisan seeking to develop such a system would consider existing systems and techniques for increasing their capacity. Given that the references above have common and well-known design features one of ordinary skill in the art would have been motivated to combine these references, with a reasonable expectation of success, to design an improved digital communication.

Sixth, a person of ordinary skill at the time of the alleged invention had reason to combine or modify one or more of the references identified about in light of the knowledge of a person of ordinary skill in the art at the time of the invention and information in the prior art cited herein. They are all directed to features within the same field and one of ordinary skill in the art at the time of the alleged invention would have been motivated to look to these teachings in the field and combine any of these known technologies.

Seventh, many of the references identified above have common design features. One of ordinary skill in the art would have been motivated and found it obvious to combine these references, with a reasonable expectation of success, to improve existing communication systems.

Maxell, Ltd.
Ex. 2005
Page 39 of 431

Defendants reserve all rights to further specify additional motivations to combine the prior art. Defendants may rely on cited or uncited portions of the prior art, other documents, and/or expert testimony to establish that a person of ordinary skill in the art would have been motivated to modify or combine the prior art so as to render the claims invalid as obvious. In addition to the exemplary motivations, suggestions, or reasons to combine described above, Defendants identify additional obviousness combinations and motivations to combine in the sections below, noting that any exemplary motivations, suggestions, or reasons to combine described above and below are not exclusive or exhaustive. Defendants may identify further examples as the case proceeds.

2. '760 Patent

The Asserted Claims of the '760 Patent are directed to methods of recording and reproducing still and moving pictures from a recording medium using standardized encoding techniques such as MPEG and JPEG. The '760 Patent describes a digital camera that can record in either a moving picture photographing mode or a still picture photographing mode depending on a switch setting. '760 Patent at 6:29-7:12. Figure 3 depicts a system block diagram of an exemplary video recording camera of the '760 Patent. *Id.* at 8:31-33. The camera includes switch 116, which indicates the user selection of a recording mode between a moving picture photographing mode and a still picture photographing mode. *Id.* at 9:5-7. When the moving picture photographing mode is selected, compressed moving streams are generated in moving picture compressing unit 105 and recorded on recording medium 114. *Id.* at 9:13-18. At the same time, pictures of a frame representing the moving picture being recorded (e.g., the picture of the start frame) are read from moving picture memory 107 and compressed by screen compressing unit 117 to produce thumbnail-sized (e.g., 160 pixels by 120 pixels) pictures. *Id.* at 9:18-26.

When the still picture photographic mode is selected, still picture file data are generated in fine still picture compressing unit 106 and recorded on recording medium 114. *Id.* at 9:33-36. In addition, a thumbnail picture of the still picture is generated by screen compressing unit 117 and recorded on recording medium 114 as thumbnail file data. *Id.* at 9:40-50.

Moving pictures are compressed using a moving picture encoding standard, such as the MPEG (Moving Picture Expert Group) standard, whereas still pictures are compressed using the

Maxell, Ltd.
Ex. 2005
Page 40 of 431

JPEG (Joint Photographic coding Experts Group) standard. *Id.* at 1:27-61, 8:42-48. In the review mode (e.g., when reproducing the pictures from the recording medium), a list of thumbnail pictures on the recording medium is displayed on a display device. *Id.* at 12:7-20.

The '760 Patent purports to solve problems with "conventional techniques" by encoding still pictures with an encoding method such as MPEG and recording of both moving and still pictures. *Id*. at 2:4-16. However, these were all well known aspects of ordinary digital cameras before the time of the alleged inventions, as even the Asserted Patents suggest.

At least the following references anticipate and/or render obvious, alone or in combination with other references, the asserted claims of the '760 patent:

Exemplary Prior Art References
WO 98/57294 A1 ("Anderson")
U.S. Patent No. 6,683,649 ("Anderson I")
U.S. Patent No. 5,903,309 ("Anderson II")
U.S. Patent No. 4,969,204 ("Jones")
U.S. Patent No. 5,953,506 ("Kalra")
U.S. Patent No. 6,288,743 ("Lathrop")
U.S. Patent No. 5,566,284 ("Wakayama")
U.S. Patent No. 5,724,579 ("Suzuki")
JPH 10-108133 A ("Ishikawa")
Photoshop 4 for Windows for Dummies, IDG Books ("Photoshop 4 for Dummies")
GIMP Official Handbook, Coriolis ("Kylander")
Kodak DC220 and DC260 Zoom Cameras and User's Guide ("DC220/DC260")
Kodak Professional DCS 315 Digital Camera and User's Guide ("DCS 315")
Sony PC Connecting Kit Product and Operating Instructions ("PC Connecting Kit")
ACDSee PowerPack User's Guide ("ACDSee")
U.S. Patent No. 6,441,913 to Anabuki at al. ("Anabuki")
U.S. Pat. App. Pub. No. 2002/0131760 to Hirai et al. ("Hirai")
U.S. Patent No. 6,005,621 to Linzer et al. ("Linzer")
U.S. Patent No. 6,028,603 to Wang et al. ("Wang")
U.S. Patent No. 5,585,933 to Ichige et al. ("Ichige")
U.S. Patent Pub. 2003/0095596 to Shimizu ("Shimizu")

Defendants identify the following exemplary combinations as combinations of prior art showing obviousness for claims 4, 6, 7, and 9 of the '760 patent:

- ACDSee
- Anderson
- Anderson I

Maxell, Ltd.
Ex. 2005
Page 41 of 431

- Anderson II
- DC220/DC260
- DCS 315
- Ishikawa
- Jones
- Kalra
- Kylander
- Lathrop
- PC Connecting Kit
- Photoshop 4 for Dummies
- Suzuki
- Wakayama

To the extent that Plaintiff contends that any of the references identified in Exhibits A-01 through A-17 do not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background, experience with digital camera systems, and/or prior art, including but not limited to one or more of the prior art references identified above.

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits A-01 through A-17 and the list above to include these limitations because, for example, encoding techniques such as JPEG and MPEG were well known and documented in the prior art before the alleged priority date of the Asserted Patents. For example, both Anderson and Anderson I describe a digital video camera capable of capturing and displaying various types of image data including digital video and high resolution still images. *See* Exhibits A-01 through I-14. The digital video camera (DVC) described in Anderson I includes an image device and a computer which enables functionality of video codec performing MPEG-2 encoding on the streaming video during recording and MPEG-2 decoding during playback, which is an advanced version of MPEG I that the '760 Patent discloses. Anderson I at 5:66-6:1. The Anderson I digital video camera also captures still images in addition to video. *Id.* at 6:40-41. When a user initiates the capture function to capture a still or moving image, the captured image is compressed in the JPEG format, and stored as an image file on the storage device. *Id.* at 6:41-52. In the review mode, the DVC enables the user to review the contents of the DVC. *Id.* at 7:50-51. The review mode screen displays a series of object cells 300 that represent the media objects stored on the DVC. *Id.* at 7:60-62, Fig. 4A. In the case of a still image, object cell 300 displays a thumbnail of the media object, which is a small, low-resolution version of the image. *Id.* at 8:7-10. In the case of video segments, object cell 300 displays a representative thumbnail or frame from the video, typically the first frame of the video. *Id.* at 8:10-14. The user may navigate through the object

Maxell, Ltd.
Ex. 2005
Page 143 of 431

displays to select and mark the desired objects and create an ordered list of objects. *Id.* at 8:66-9:6. The ordered list is then saved as a slide show. *Id.* at 9:6-7. When the slide show is presented, each media object comprising the slide show is automatically played back and displayed on display screen. *Id.* at 9:8-13.

A person of ordinary skill in the art would have found it obvious to combine, for example, Anderson and Anderson I to arrive at the purported invention of the '760 patent. Market forces and design incentives, for example, related to digital video cameras make the combination of such a system with any of the references identified in Exhibits A-01 through A-17 predictable to one of ordinary skill in the art. For example, a POSITA would have found obvious recording and displaying a list of thumbnail pictures corresponding to still pictures to improve the multimedia presentation on the digital cameras. Anderson I at 2:34-37. Indeed, Anderson I explicitly describes creating and displaying thumbnails from media objects (e.g., images, video, audio and text) stored in a digital imaging device (e.g., digital camera). A POSITA would have been found obvious to encode still pictures with the MPEG standard instead of JPEG because it is a simple substitution of known techniques.

Moreover, there were a finite number of identified, predictable image file compressing techniques in the prior art. Therefore, replacing any compression technique with any existing techniques (MPEG and JPEG) was a predicable solution that a person of ordinary skill in the art would know had a reasonable expectation of success.

Accordingly, to the extent Plaintiff contends that any reference identified in Exhibits A-01 through A-17 does not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background knowledge of one of ordinary skill in the art and/or by combining any reference identified in Exhibits A-01 through A-17 in view of any of the references identified in the chart above.

3. '334 Patent

The Asserted Claims of the '334 Asserted Patents include various basic components and methods of controlling transmission power and amplifiers in a cellular telephone that were all well known aspects of controlling transmission power in cellular telephones before the time of the

Maxell, Ltd.
Ex. 2005
Page 144 of 431

alleged inventions, as even the Asserted Patents suggest. For example, the Asserted Claims include the basic "receiving," "generating," "converting," and "controlling" steps of signals used in cellular communications systems.

At least the following references anticipate and/or render obvious, alone or in combination with other references, the asserted claims of the '334 patent:

Exemplary Prior Art References
U.S. Patent No. 5,452,473 to Weiland et al. ("Weiland")
U.S. Patent No. 5,548,616 to Mucke et al. ("Mucke")
U.S. Patent No. 5,642,378 to Denheyer et al. ("Denheyer")
U.S. Patent No. 6,236,863 to Waldroup et al. ("Waldroup")
U.S. Patent No. 6,122,491 to Francisco ("Francisco")
Applicant Admitted Prior Art ("AAPA")
Japanese Patent Published Application No. H06-252797 to Abe ("Abe")
U.S. Patent No. 5,056,109 to Gilhousen et al. ("Gilhousen")
Japanese Patent Published Application No. H04-277909 to Masubuchi ("Masubuchi")
Japanese Patent Published Application No. H06-93631 to Ono ("Ono")
U.S. Patent No. 5,589,796 to Alberth et al. ("Alberth")

Additional relevant references and combinations may be disclosed in Exhibits B-01 through B-15, and are fully incorporated herein. To the extent that Plaintiff contends that any of the references identified in Exhibits B-01 through B-15 do not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background, experience with power control systems, and/or prior art, including but not limited to one or more of the prior art references identified above.

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits B-01 through B-15 and the list above to include these limitations because every reference relates to solving the same problem (controlling transmission power in a cellular telephone) in the same technological field (cellular telephone). *See Pro-Mold & Tool Co. v. Great Lakes Plastics, Inc.*, 75 F.3d 1568, 1573 (Fed. Cir. 1996) (the motivation to combine "may also come from the nature of a problem to be solved, leading inventors to look to references relating to possible solutions to that problem.").

For example, to the extent that any prior art reference is determined not to disclose "a method of controlling cellular telephone used in a CDMA system," power control in CDMA

Maxell, Ltd.
Ex. 2005
Page 171 of 431

systems was well known and documented in the prior art before the alleged priority date of the Asserted Patents. For example, without limitation, each of Mucke, Waldroup, Francisco, Wheatley, Gillousen, IS-95, and Wilson discloses this limitation. *See* Exhibits B-01 – B-15. It would have been obvious to apply prior art transmission power control schemes to the widely known CDMA system to reduce power consumption and/or signal interference in the CDMA system. Market forces and design incentives, for example, related to power control in a CDMA system make the combination of such a system with any of the references identified in Exhibits B-01 through B-15 predictable to one of ordinary skill in the art.

For example, to the extent that any prior art reference is determined not to disclose "converting said first communication signal received from a cell-site station into a voice signal code, converting said voice signal code into an audio signal for driving an acoustic transducer of said cellular telephone, converting an audio input signal from said acoustic transducer into an input voice code signal, converting said input voice code signal into a second communication signal," this limitation would have been obvious to a person of ordinary skill in the art in view of the reference itself and/or other references. For example, without limitation, each of Mucke, Denheyer, and IS-95 discloses this limitation. It would have been obvious that any cellular telephone, to perform the basic voice call function, be capable of converting a communication signal from a base station (cell-site station) into a voice signal code and then to an audio signal to be played by a speaker, and converting an audio signal from a microphone into a voice signal code and then to a communication signal to be sent to the base station.

For example, to the extent that any prior art reference is determined not to disclose "an open-loop power control is performed first and then a close-loop power control is performed," this limitation would have been obvious to a POSITA in view of the reference itself and/or other references. For example, without limitation, each of AAPA, Mucke, Waldroup, Weiland, Wheatley, and Gilhousen discloses this limitation. *See* Exhibits B-01 – B-15. In fact, the Background section of the '334 Patent explicitly explains that this limitation is disclosed in the admitted prior art IS-95. '334 Patent at 1:47-61 ("In this case, the transmitter performs the open-loop power control at first, then it performs the closed-loop power control for the transmitted power

Maxell, Ltd.
Ex. 2005
Page 172 of 431

to converge into a desired value which the cell-site station requires.").

For example, to the extent that to the extent that any prior art reference is determined not to disclose "a function defining a relation between bias data and gain data stored in said memory," this limitation would have been obvious to a person of ordinary skill in the art in view of the reference itself, the AAPA and/or other references. For example, without limitation, each of AAPA, Denheyer, Waldroup, Weiland, Wheatley, DiPiazza, Alberth, discloses this limitation. *See* Exhibits B-01 – B-15. Memory was a ubiquitous, conventional element that was present in virtually all cellular telephones by the mid-1990s. A POSITA would have found it obvious to use a function defining a relation between bias data and gain data in memory in order to precisely adjust the gain and bias data thereby stably controlling transmission power as required by the base station in a CDMA system.

For example, to the extent that any prior art reference is determined not to disclose "bias conditions defined in a ratio to the maximum bias voltage value," this limitation would have been obvious to a person of ordinary skill in the art in view of the reference itself and/or other references. *See* Exhibits B-01 – B-15. Since the bias level will be less than or equal to a known maximum, it would have been readily apparent that it may be expressed as a percentage of the maximum, for example to save space in a memory.

For example, to the extent that any prior art reference is determined not to disclose "said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very far from the cell-site station," this limitation would have been obvious to a person of ordinary skill in the art in view of the reference itself and/or other references, to the extent the phrases "increases gradually" and "very far from" are determined to be not indefinite. For example, without limitation, each of Mucke, Denheyer, Francisco, Weiland, and U.S. Patent No. 5,774,797 ("Kawano") discloses this limitation. *See* Exhibits B-01 – B-15. It would have been obvious to apply a gradually increasing bias voltage to the power amplifier, in order to accommodate the increased power requirement without unnecessary power consumption, to maintain amplifier linearity, and/or to reduce signal interference. *See, e.g.*, Mucke at 12:18-27; Francisco at 6:34-58.

Maxell, Ltd.
Ex. 2005
Page 173 of 431

For example, to the extent that any prior art reference is determined not to disclose "said bias condition increases gradually to the maximum value when said output intensity increases within the range of −50 dB to 0 dB," this limitation would have been obvious to a person of ordinary skill in the art in view of the reference itself and/or other references. For example, without limitation, each of Mucke, Waldroup, Francisco, and/or Weiland discloses this limitation. *See* Exhibits B-01 – B-15. It would have been obvious to apply the gradually increasing bias in a range of −50 dB to 0 dB in order to extend the benefit of, for example, reduced power consumption to a broad range specified by the CDMA standard. *See e.g.*, Mucke at 7:52-59.

One of ordinary skill also would have been motivated to combine any of the above references together to yield predictable results, as combining the references would simply entail combining known elements by known methods in the art. In addition, any such combination would involve the simple substitution of one known, equivalent element for another. Such combinations would have been obvious to try because there were only a finite number of predictable solutions. Any such combination would yield predictable results using known techniques and would involve the simple substitution of one known, equivalent element for another.

Moreover, there were a finite number of identified, predictable power control systems in the prior art. Therefore, combining any system with any of the references in Exhibits B-01 – B-15 was a predicable solution that a person of ordinary skill in the art would know had a reasonable expectation of success.

Accordingly, to the extent Plaintiff contends that any reference identified in Exhibits B-01 through B-15 does not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background knowledge of one of ordinary skill in the art and/or by combining any reference identified in Exhibits B-01 through B-15 in view of any of the references identified in the chart above.

4. '821 Patent

Claim 6 of the '821 Patent includes various basic components to perform a white balancing adjustment method that were all well-known aspects of imaging systems before the time of the alleged inventions, as even the Asserted Patents suggest.

Maxell, Ltd.
Ex. 2005
Page 174 of 431

At least the following references anticipate and/or render obvious, alone or in combination with other references, the asserted claim of the ’821 patent:

Exemplary Prior Art References
U.S. Patent No. 5,282,022 to Haruki et al. (“Haruki ’022)
U.S. Patent No. 5,283,632 to Suzuki et al. (“Suzuki ’632”)
U.S. Patent No. 5,402,182 to Sugiura (“Sugiura ’182”)
U.S. Patent No. 5,465,116 to Suzuki (“Suzuki ’116”)
U.S. Patent No. 5,617,141 to Nishimura et al. (“Nishimura”)
U.S. Patent No. 6,480,624 to Horie et al. (“Horie ’624”)
U.S. Patent No. 7,170,633 to Hara et al. (“Hara ’633”)
U.S. Patent No. 6,693,673 B1 to Tanaka et al. (“Tanaka ’673”)
Japanese Patent No. H03-148989 to Tanabe et al. (“Tanabe”)
Japanese Patent No. H04-10887 to Haruki et al. (“Haruki ’887”)
U.S. Patent No. 7,551,209 to Miyao et al. (“the ’209 patent”)

Defendants identify the following exemplary combinations as combinations of prior art showing obviousness for claim 6 of the ’821 patent:

- Hara ’633
- Hara ’633 in view of Haruki ’022
- Hara ’633 in view of Haruki ’022 and Haruki ’887

- The ’209 Patent

To the extent that Plaintiff contends that any of the references identified in Exhibits C-01 through C-11 do not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background, experience with imaging systems, and/or prior art, including but not limited to one or more of the prior art references identified above.

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits C-01 through C-11 and the list above to include these limitations because every reference relates to solving the same problem (accurately adjusting white balance) in the same technological field (image forming). *See Pro-Mold & Tool Co. v. Great Lakes Plastics, Inc.*, 75 F.3d 1568, 1573 (Fed. Cir. 1996) (the motivation to combine “may also come from the nature of a problem to be solved, leading inventors to look to references relating to possible solutions to that problem.”).

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits C-01 through C-11 and the list above to include these limitations because, for example, imaging systems that performed white balancing were well known and documented in the prior art before the alleged priority date of the Asserted Patents. For example, Haruki ’887 and Suzuki ’632 each disclose a white balance adjustment device that utilizes object brightness, object distance, and zoom value information to perform white balancing. *See* Exhibits C-03 and C-09. A person of ordinary skill in the art would have found it obvious to modify Haruki ’887 and/or Suzuki ’887’s white balance adjustment device to select between a finite number of ways to perform white balancing using these parameters, and in view of the knowledge of a POSITA and/or the other cited references (e.g., Tanabe), to arrive at the claimed invention of the

Maxell, Ltd.
Ex. 2005
Page 186 of 431

’821 Patent. For another example, Hara ’633 discloses an imaging apparatus that corrects the white balance of an image based on judging various parameters including object brightness, object distance, and zoom value information. *See* Exhibit C-01. A person of ordinary skill in the art would have found it obvious to modify Hara ’633’s white balance adjustment device to select between a finite number of ways to perform white balancing using these parameters, and in view of the other cited reference (e.g., Tanabe), to arrive at the claimed invention of the ’821 Patent. Indeed, each of the references identified above and shown in the attached charts disclose a device that adjusts white balancing using at least some of the three claimed parameters—object brightness, object distance, and zoom—and it would have been obvious to a person of ordinary skill in the art to modify each reference to incorporate additional processing and functionality based on known techniques, as exemplified in any of the other cited references, to provide more accurate white balancing with a reasonable expectation of success. Any of these combinations merely involve combining known techniques and components for white balancing with a reasonable expectation of success that would have been obvious to try amidst the limited set of available white balancing permutations.

In fact, the claimed basic features of imaging systems have been known for decades. *See, e.g.*, Section II.C, *supra*; Exhibits C-01 – C-11. Market forces and design incentives, for example, related to imaging systems with white balancing make the combination of such a system with any of the references identified in Exhibits C-01 through C-11 predictable to one of ordinary skill in the art.

Moreover, there were a finite number of identified, predictable imaging systems with white balancing in the prior art. Therefore, combining any system with any of the references in Exhibits C-01 through C-11 was a predicable solution that a person of ordinary skill in the art would know had a reasonable expectation of success.

Accordingly, to the extent Plaintiff contends that any reference identified in Exhibits C-01 through C-11 does not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background knowledge of one of ordinary skill in the art and/or by combining any reference identified in Exhibits C-01 through C-11 in view

Maxell, Ltd.
Ex. 2005
Page 187 of 431

of any of the references identified in the chart above.

5. '188 Patent

The asserted claims of the '188 patent describe a method for protecting against accidental editing of thumbnail images by restricting a user's ability to interact with the thumbnail images. The '188 patent explains, "a thumbnail" representing a file "may be accidentally changed by a misoperation of the user." '188 Patent at 1:44-46. The '188 patent aims "to provide an information editing apparatus capable of preventing an accidental change of a thumbnail image." *Id.* at 1:48-50. The '188 patent describes a two-step method to accomplish this objective. First, a "deciding process" performs a check on a so-called "change permission" associated with a thumbnail to determine whether the user may alter the thumbnail. *Id.* at 2:35-45. As the '188 patent explains, this "change permission" is "information" that "indicat[es] whether a thumbnail image is changeable." *Id.* at 1:59-63. Second, a "change prohibiting process" then prevents modification of the thumbnail if the associated "change permission" information does not allow modification. *Id.* at 1:65-67. These were all well known aspects of image editing systems before the time of the alleged inventions, as even the '188 patent suggests.

At least the following references anticipate and/or render obvious, alone or in combination with other references, the asserted claims of the '188 patent:

Additional relevant references and combinations may be disclosed in Exhibits D-01 through D-11, and are fully incorporated herein. To the extent that Plaintiff contends that any of the references identified in Exhibits D-01 through D-11 do not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background, experience with imaging systems, and/or prior art, including but not limited to one or more of the prior art references identified above.

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits D-01 through D-11 and the list above to include these limitations because, for example, image editing systems were well known and documented in the prior art before the alleged priority date of the Asserted Patents. In fact, the claimed basic features of image editing systems have been known for decades. *See, e.g.*, Section II.C, *supra*; Exhibits D-01 – D-11. Market forces and design incentives, for example, related to image editing systems make the combination of such a system with any of the references identified in Exhibits D-01 through D-11 predictable to one of ordinary skill in the art.

For example, a POSITA would have found obvious integration of video management and editing/erasure protection features from one image editing systems, such as Yoshida, Terashita, Dow, and the other references listed above into the other image editing systems. All of these references are in the field of digital image management and focus on protecting stored images from unwanted deletion or modification. Yoshida, for example, teaches a "image management method and device suitable for a digital camera" with a "configuration [that] may be such that the user can select either a mode in which the representative image is changed or a mode in which the representative image is not changed." Yoshida at [0001], [0216]. Likewise, Terashita describes a

Maxell, Ltd.
Ex. 2005
Page 228 of 431

"information processing device and method as well as media" that has "[a]n AV content attribute record," which records metadata for an image and includes "the setting to prevent accidental deletion." Terashita at [0001], [0054]. Dow teaches a handheld image capture device with functionality to delete images. Dow at Abstract.

An exemplary motivation to combine these references would be to enhance Yoshida, Terashita, and Dow's delete or edit functionality with more nuanced approaches to protecting content from deletion as described in these references and others (such as Murakami or Tezuka). The resulting combinations would result in a more flexible and user-friendly system that can better protect important images while still allowing for efficient memory management. Specifically, incorporating Murakami's erasure protection features into Yoshida, Terashita, and Dow's systems would allow users to protect certain images from accidental deletion, addressing a key concern in digital image management.

Further, making these combinations would have merely involved combining prior art elements—for example, a multimedia management system for preventing accidental erasure or editing within prior art image editing systems (such as Yoshida, Terashita, or Dow)—according to known methods to yield predictable results. The combination would have been predictable and foreseeable because each of these references relies, like the '188 patent itself, on conventional computer hardware operating in conventional ways. In fact, the '188 patent describes the relevant hardware by using generic, exemplary language. For example, the '188 patent explains the "program" implementing the allegedly novel method "is recorded on an information recording medium including a flexible disk, a hard disk, and the like and the program is read and exercised by a general-purpose microcomputer and so on." *Id.* at 18:32-37. The '188 patent does not disclose any novel computer components or combination of components. Terashita likewise generically refers to a "personal computer 1" as an exemplary system implementing its teaching. Terashita at [0018]; *see also* Yoshida at [0022] ("The image management device of the present invention is applicable to various image information processing devices."). Thus, combining the references would have been no more than the use of a known technique to improve similar a device in the same way.

Maxell, Ltd.
Ex. 2005
Page 229 of 431

Accordingly, to the extent Plaintiff contends that any reference identified in Exhibits D-01 through D-11 does not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background knowledge of one of ordinary skill in the art and/or by combining any reference identified in Exhibits D-01 through D-11 in view of any of the references identified in the chart above.

6. '493 and '729 Patents

The Asserted Claims of the '493 and '729 Asserted Patents include various basic components and methods to use electric cameras. These were all well known aspects of imaging systems before the time of the alleged inventions, as even the Asserted Patents suggest.

At least the following references anticipate and/or render obvious, alone or in combination with other references, the asserted claims of the '493 and '729 patents:

Exemplary Prior Art References
U.S. Patent No. 5,444,482 to Misawa et al. ("Misawa '482")

To the extent that Plaintiff contends that any of the references identified in Exhibits E-01 through E-13 and F-01 through F-15 do not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background, experience with imaging systems, and/or prior art, including but not limited to one or more of the prior art

Maxell, Ltd.
Ex. 2005
Page 268 of 431

references identified above.

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits E-01 through E-13 and F-01 through F-15 the list above to include the asserted claim limitations of the '493 and '729 patents at least based on the reasons described in the because every reference relates to solving the same problem (accurately adjusting white balance) in the same technological field (image forming). *See Pro-Mold & Tool Co. v. Great Lakes Plastics, Inc*., 75 F.3d 1568, 1573 (Fed. Cir. 1996) (the motivation to combine "may also come from the nature of a problem to be solved, leading inventors to look to references relating to possible solutions to that problem.").

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits E-01 through E-13 and F-01 through F-15 and the list above to include the asserted claim limitations of the '493 and '729 patents because, for example, electric cameras were well known and documented in the prior art before the alleged priority date of the Asserted Patents. In fact, the claimed basic features of communication systems have been known for decades. *See, e.g.*, Section II.C, *supra*; E-01–E-13 and F-01-F-15. Market forces and design incentives, for example, related to electric cameras make the combination of such a system with any of the references identified in Exhibits E-01 through E-13 and F-01 through F-15 predictable to one of ordinary skill in the art.

For example, a POSITA would have found it predictable to combine the teachings of Misawa '482 and Parulski '218 because both Misawa '482 and Parulski '218 pertain to electronic digital cameras for recording movies and still images. A POSITA would have, in particular, found it obvious to (1) replace Misawa '482's 640-pixel by 480-pixel image sensor with Parulski '218's 768-pixel by 512-pixel image sensor, (2) add an LCD, as taught in Parulski '218, to Misawa '482's camera and use a motion mode, as taught in Parulski '218, for previewing on the LCD an image to be captured in a still image mode, and (3) use a line-skipping process as taught in Parulski '218 to obtain the movie picture image generated in Misawa '482's movie picture mode.

A POSITA would have been motivated, for example, to replace Misawa '482's image sensor with Parulski '218's image sensor to improve the quality of images obtained from the image

Maxell, Ltd.
Ex. 2005
Page 269 of 431

sensor and improve the quality of these images when displayed on a high-resolution display or printed on a high-quality printer. Parulski '218 at 5:5–7. Moreover, a POSITA would have been motivated, for example, to replace Misawa '482's 4:3 aspect ratio image sensor with Parulski '218's 3:2 aspect ratio image sensor so that the aspect ratio of the image sensor would match the aspect ratios of the standard 35-millimeter film format and standard 4-inch by 6-inch still prints. Parulski '218 at 5:57–62. This modification would have been predictable and would have had a reasonable expectation of success because both Misawa '482's and Parulski '218's image sensors are CCDs and thus operate under the same principles and because Parulski '218's image sensor, as used in Misawa '482, would have been used for the same purpose as taught in Parulski '218—to record images. Misawa '482 at 3:17–19; Parulski '218 at 3:38–47, 5:49–53.

A POSITA would have been motivated, for example, to add an LCD, as taught in Parulski '218, into Misawa '482's electronic digital camera so that the LCD could (1) present a user a preview of an image to be captured in Misawa '482's still picture mode without using complex circuitry, (2) play back previously recorded images without an external monitor, and (3) provide status information or a reconfigurable push-button menu to the user. *See* Parulski '218 at 1:27–34, 2:24–53, 3:33–38, 7:41–48; Misawa '482 at 1:33–39. A POSITA would have likewise been motivated to use a preview mode processing circuit and a line-skipping process, as taught in Parulski '218, to achieve "a relatively less complex digital image processing technique" and "a higher data rate" in the motion mode, to avoid unnecessarily producing high-resolution imagery for Parulski '218's low-resolution LCD, and to enable more rapid processing of image data. Parulski '218 at 4:61–5:1, 5:15–24. And because Parulski '218 teaches using an image sensor that has more vertically arranged lines (e.g., 512 lines) than the images for monitoring (e.g., 204 lines), a POSITA would have been motivated to use a line-skipping process to eliminate at least some of the vertically arranged lines from the image sensor in forming the monitoring images. Parulski '218 at 5:49–52, 7:41–48. Parulski '218 teaches using its LCD and its motion mode in a digital camera that captures still imagery, and thus incorporating an LCD and a motion mode into Misawa '482's camera would have been predictable and would have had a reasonable expectation of success. Parulski '218 at 3:29–33; Misawa '482 at 1:9–14, 1:54–58.

Maxell, Ltd.
Ex. 2005
Page 270 of 431

Third, a POSITA would have been motivated to use a line-skipping process, as taught in Parulski '218, to generate the movie picture image in Misawa '482's movie picture mode so that obtaining a 4:3 aspect ratio movie picture image from Parulski '218's 3:2 aspect ratio image sensor would produce fewer geometric distortions, would preserve visual information captured by the image sensor, and would have reduced storage requirements. Parulski '218 at 6:45–50, 7:33–40. And because Misawa '482 and Parulski '218 both teach that image sensors having more vertically arranged lines (480 lines, as taught in Misawa '482, and 512 lines, as taught in Parulski '218) than the movie picture images (240 lines, as taught in Misawa '482), a POSITA would have been motivated to use a line-skipping process to eliminate at least some of the vertically arranged lines from the image sensor in forming the movie picture images. Misawa '482 at 7:13–15; Parulski '218 at 5:49–52, 7:41–48. These modifications to Misawa '482 would have been predictable and would have had a reasonable expectation of success as Parulski '218 teaches using its line-skipping mode with an image sensor like the one taught in Misawa '482 to achieve an aspect ratio akin to the aspect ratio of the movie picture captured in Misawa '482.

Modifications of the other primary references would have been obvious in a similar vein. While some aspects of the Misawa '482 and Parulski '218 combination have been articulated above, the IPR petitions challenging the '493 and '729 patents include additional aspects of the combination and motivations to combine, which are incorporated by reference. Additionally, the rationales provided for the other grounds rendering the claims of the '493 and '729 patents obvious should be understood as incorporated by reference. Similarly, while the above discussion lays out in some detail aspects of the Misawa '482 and Parulski '218 combination, a POSITA would have found it obvious to arrive at the claimed elements based on any of the primary references appearing in the appended claim charts and/or knowledge of a POSTIA. For example, each of the primary references in the appended claim charts disclose image sensors that would have been obvious to replace with the disclosed image sensors in any of the other references performing the same functionality in the same way. Similarly, for any of the references that do not disclose a localized display unit on the electric camera, it would have been obvious to provide an LCD display (e.g., as disclosed in Parulski '218, as explained above) to provide an improved user interface and

Maxell, Ltd.
Ex. 2005
Page 271 of 431

provide improved preview and play-back functionality. Further, the mixing/culling in any of the primary references would have been obvious to modify based on mixing/culling in any of the other disclosed references, or based on the knowledge of a POSITA, because such a combination involves combining known elements according to known methods to yield a predictable result and also require a simple substitution of one or more known elements for another to obtain a predictable result. Further, for any of the references that do not disclose functionality to change the view angle of the image, it would have been obvious to incorporate view angle change functionality (e.g., as disclosed in Parulski '218, as explained above) to provide an improved user interface and allow users to compose an image to their liking before capturing the image. These modifications, all limited to image processing for electric cameras, involve conventional techniques implemented in known manners, and thus, would have a reasonable expectation of success. Further, the implementation of image-instability adjustment (e.g., as disclosed in Kawahara '361) to the image processing of the charted references would have been obvious to try to improve a similar device in the same way. The references themselves provide teachings suggesting the benefits and feasibility of implementing image-instability, such that a person of ordinary skill in the art would have been motivated to try to implement this known solution in a known device ready for improvement. All motivations to combine, or reasons a POSITA would have found a limitation obvious based on their knowledge, discussed in the IPR petitions challenging the validity of the '493 and '729 patent claims should be understood as incorporated by reference here, and as being equally applicable to the obviousness of the asserted claim limitations based on the other prior art references appearing in Exhibits E-01 through E-13 and F-01 through F-15.

Accordingly, to the extent Plaintiff contends that any reference identified in Exhibits E-01 through E-13 and F-01 through F-15 does not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background knowledge of one of ordinary skill in the art and/or by combining any reference identified in Exhibits E-01 through E-13 and F-01 through F-15 in view of any of the references identified in the chart above.

7. '449 and '072 Patents

The Asserted Claims of the '449 and '072 Asserted Patents are directed to managing data, such as multimedia digital data files (e.g., audio and videos files) that a user may want to reproduce. *See, e.g.*, '072 Patent at Abstract, 1:30-54.[2] The '449 and '072 Patents use a "management" scheme with hierarchical levels, and provides a summary of a "management state of AV da-ta on a recording medium" in Figure 1. Figure 1 depicts a management state of AV data on a recording medium in an exemplary recording and reproducing device. '072 Patent at 3:46-49. Reference numeral 101 designates AV data, and each of Program #1 to Program #3 is present on the recording unit. *Id.* at 3:49-52. Reference numeral 102 designates a third management hierarchical level (Management Level 3), wherein Program Information #1 to Program Information #3 indicate the whole reproduction ranges of Program #1 to Program #3, respectively. *Id.* at 3:56-58. Management Level 3 also includes Program Information #2a to Program Information #3a, each of which indicates a reproduction range of the whole or a part of a program arbitrarily specified by the user. *Id.* at 3:59-63. Reference numeral 103 designates a second management hierarchical level (Management Level 2), which includes Play List Information #1 to Play List Information #n. *Id.* at 4:4-8. Each play list information indicates a reproduction sequence of arbitrary program information pieces in Management Level 3. *Id.* at 4:8-10.

Reference numeral 104 designates a first management hierarchical level (Management Level 1) including a plurality of unified information pieces. *Id.* at 4:12-16. Original Unified Information contains Program Information #1 to Program Information #3 on Management Level 3. *Id.* at 4:16-20. Play List Unified Information contains Play List Information #1 to Play List Information #n on Management Level 2. *Id.* at 4:23-25. User-Defined Unified Information #1 to User-Defined Unified Information #m contain one or more from among play list information pieces on Management Level 2 and program information pieces on Management Level 3. *Id.* at 4:29-33.

[2] The '449 patent and '072 patents share the same specification. Although citations to the '072 patent is used herein, corresponding disclosures are also found in the '449 patent and are expressly incorporated herein.

Maxell, Ltd.
Ex. 2005
Page 273 of 431

The ’449 and ’072 Patents purport to solve problems with “conventional technique[s]” by allowing users to have more control over manipulation and rearranging of their content. ’072 Patent at 2:24-3:6. The primary example used in the specification is with respect to “play lists.” *See, e.g., id.* at Abstract. In particular, the ’449 and ’072 Patent uses an example where there is a first playlist for a “mother” and a second playlist for a “father.” ’072 Patent at 6:17-38. As shown in FIGS. 6 and 7, two menu areas (“601” Mother and “701” Father) each display a list of thumbnail images (402, 502) and (503, 502) corresponding to “play list information” #1 and #2, respectively. Each menu has a first area that indicates a group, classified as “Mother” or “Father” in this example, and a second area, which displays thumbnails of data corresponding to the group. ’072 Patent at FIGS. 6-7. The specification explains that if the father and mother each have the same video on their respective lists (*e.g.* 502), the father can delete the video from his list without that video being automatically deleted from the mother’s list. *See*’072 Patent at 6:17-38. These were all well known aspects of imaging systems before the time of the alleged inventions, as even the Asserted Patents suggest.

At least the following references anticipate and/or render obvious, alone or in combination with other references, the asserted claims of the ’449 and ’072 patents:

To the extent that Plaintiff contends that any of the references identified in Exhibits G-01 through G-14 and H-01 through H-13 do not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background, experience with imaging systems, and/or prior art, including but not limited to one or more of the prior art references identified in the chart above.

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits G-01 through G-14 and H-01 through H-13 and the list above to include these limitations because, for example, systems for managing data, such as multimedia digital data files were well known and documented in the prior art before the alleged priority date of the Asserted Patents. In fact, the claimed basic features of these data management systems have been known for decades. *See, e.g.*, Section II.C, *supra*; Exhibits G-01 – G-14 and H-01 – H-13.

Maxell, Ltd.
Ex. 2005
Page 353 of 431

Market forces and design incentives, for example, related to data management systems make the combination of such a system with any of the references identified in Exhibits G-01 through G-14 and H-01 through H-13 predictable to one of ordinary skill in the art.

For example, a POSITA would have found obvious integration of video processing circuit, such as the video processing circuit of Sporer, into video editing systems (such as Kaplan), to enhance the system "for use with digital cameras" or other "interface devices that allow video tape images to be digitized and downloaded to computers." Kaplan at [0058]; *see also* Kaplan at [0037]. In particular, including video processing circuitry in Kaplan's system, (as Sporer describes), would enable the combined system to "capture full-rate motion video information" and "playback full-rate motion video" by "using the system memory of a computer as a data buffer for holding compressed video data from the circuit." Sporer, 3:66-4:5. A POSITA would have been motivated, for example, to include in Kaplan's system, "a video and audio encoder/decoder (codec) 62 for encoding and decoding MPEG format video and audio," as Sporer teaches, where Kaplan already describes such files as being stored and played on its computer. Sporer, 6:6-8; Kaplan at [0050] ("display images representing movies saved in … MPEG multimedia file formats"); *see also* Sporer, 5:59-6:17. Indeed, Kaplan directly refers to the existence of an increasing multitude of digital video formats and to the difficulty of organizing computer files containing multimedia content. Kaplan at [0002]-[0003].

A POSITA would have found it obvious to include a video processing circuit, as Sporer teaches, where such circuity would include, among other components, an encoder that receives video data input from external devices (e.g., Kaplan's camcorder) and processes that data for storage. Sporer at 4:66-5:10 ("a computer readable and writable non-volatile recording medium 80"; "The disk should have sufficient size to hold the video information to be edited") 5:59-6:37, 11:50-12:7 ("The video information in the system memory is then copied to disk into a data file"). Kaplan teaches transferring videos and images from external devices (e.g., digital cameras and interface devices that allow video tape images to be transferred to computers), where files are "downloaded to computers." Kaplan at [0058]. A POSITA would have understood that, in the combination device, input video data from the external devices would be processed (e.g., encoded)

Maxell, Ltd.
Ex. 2005
Page 354 of 431

using video processing circuitry, as Sporer teaches, and then stored in Kaplan's recording medium ("hard disks, flash memory cards, CD-ROMs, optical storage devices, or magnetic storage devices"), as both Sporer and Kaplan teach. Kaplan at [0034]; Sporer, 4:66-5:10, 5:59-6:37, 11:50-12:7.

Combining the teachings of the references listed above would have merely involved combining prior art elements—for example, a multimedia management system per Kaplan and components (e.g., codecs) for processing certain types of input multimedia data per Sporer—according to known methods to yield predictable results. A POSITA would have been motivated to combine these teachings to realize the implementation details (of Sporer) for receiving and processing video data from external devices, as Kaplan describes. For example, a POSITA would have been motivated to include video codecs, such as an MPEG codec, for encoding video data received from external devices (e.g., camcorder or other interface devices) into a format that can be played back on Kaplan's computer (and the systems of the other references listed above). Kaplan at [0050] ("display images representing movies saved in … MPEG multimedia file formats"); *see also* Boston at [0077] ("When show is encoded, it is converted to a compressed format suitable for storage or transmission; when it is decoded it is converted to a non-compressed (raw) format suitable for presentation.").

The combination of these references would have been predictable and foreseeable because the references disclose computing systems that can store, process, and play back multimedia files from external video devices (Kaplan at [0004], [0037], [0058]; Sporer, Abstract, 4:4-10, FIG. 1) and the references describe the use of standard encoding techniques (e.g., MPEG files) (Kaplan at [0050]; Sporer, 5:59-6:17), and 2) the combination merely involves incorporating known features that are explicitly disclosed in the references and would have been understood by a POSITA as likely present, but not explicitly disclosed in other references. The combination is predictable, at least in part, because elements of the combined system would each perform similar functions they had been known to perform prior to the combination. *Id*. For example, the computer of Kaplan would still perform the same functions, including storing, manipulating, and displaying

Maxell, Ltd.
Ex. 2005
Page 355 of 431

multimedia content and receiving such content from external devices, as it did prior to the combination with Sporer. *Id.*

Further, a POSITA would have also looked to references such as Bryant that disclose user-customizable metadata for video and image data including, for example groups that enables subsequent organization. *See, e.g.*, Bryant at [0003]-[0005], [0029]. Bryant explains that, by using multimedia according to its systems and methods, a particular user's "affective information" can be captured, which can be stored with video images. Bryant at [0029]-[0034]. "A POSITA would have recognized that inclusion of the richer metadata in Bryant would have improved the Kaplan system, allowing for more effective (e.g., more detailed or more personalized) organization and retrieval of multimedia information." The teachings of Bryant itself motivate the combination. *Id.*

With Bryant's robust disclosure of user-customizable metadata, such as "groups" (e.g., Animals, Sports), the corresponding areas of the interface menu in Kaplan could be updated. *See* Bryant at FIGS. 8, 9A-9C. For instance, a POSITA would have used the display arrangement and controls set forth in Bryant's FIGS. 9A-9C, which would allow for more effective (e.g., more detailed or more personalized) organization and retrieval of multimedia information in the primary art references listed above. Bryant at [0100] ("[T]he user optionally resets images that are no longer considered favorites. This is accomplished using the favorites level selection area 860."). For instance, the metadata of Bryant would be useful with respect to the search functions in Kaplan. *See* Kaplan at [0065]-[0066]. Additionally, Bryant explicitly teaches other user-customizable features, such as, for example, options for sorting thumbnails. Bryant at [0094]. In particular, Bryant teaches a GUI screen that "includes sort options that are selected using a sort items text box 844 and a pull-down arrow icon 846 to select a desired sort option from a list, including sort by date, caption, or keyword" in addition to a "reverse order checkbox … to reverse the display of the thumbnail images." *Id.* A POSITA would have included as such sort options as one of the "functions associated with the user interface" in Kaplan. Kaplan at [0040]. Indeed, Kaplan describes its interface with reference to the "most popular operating system available today," "Microsoft Windows," and explains that its "interface for controlling functions of the multimedia management system [] include[s] operational options that correspond to common features of the

Maxell, Ltd.
Ex. 2005
Page 356 of 431

Windows operating system." Kaplan at [0040]. With its emphasis on user-customization and control, Bryant itself further motivates the combination.

Modifications of the other primary references would have been obvious in a similar vein. That is, the primary references disclose digital cameras or other interface devices that allow video data to be digitized and downloaded that would have been obvious to replace with other disclosed video processing circuitry performing the same functionality in the same way. Similarly, for any of the references that do not disclose video processing circuits, it would have been obvious to provide a video processing circuit (e.g., as disclosed in Sporer, as explained above) to provide an improved such circuitry. And any reference that lack the flexible metadata to organize videos into groups and playlists would have looked to Bryant's teachings of such metadata Such combinations involve combining elements known in the prior art according to known methods to yield a predictable result and also require a simple substitution of one or more known elements for another to obtain a predictable result. The references themselves provide teachings suggesting the benefits and feasibility of implementing image-instability, such that a person of ordinary skill in the art would have been motivated to try to implement this known solution in a known device ready for improvement.

Further, the references use conventional components and programming, such that combinations would have been straightforward and yielded predictable results. For instance, both Kaplan and Bryant use standard hardware, including Windows-based programming. *See* Kaplan at [0037]-[0038]; Bryant at [0037]-[0040]. Additionally, given that Kaplan already included metadata, such as Favorites, adding additional metadata fields such as those taught by Bryant would have been a straight forward application of known programming techniques. A POSITA would have known how to modify any data structures and user interfaces to include additional metadata because modifying data structures and user interfaces was well within their skill, and they had already created those data structures and user interfaces to create the system of Kaplan in the first place. Thus, combining the references would have been no more than the use of a known technique to improve similar a device in the same way.

Accordingly, to the extent Plaintiff contends that any reference identified in Exhibits G-01 through G-14 and H-01 through H-13 does not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background knowledge of one of ordinary skill in the art and/or by combining any reference identified in Exhibits G-01 through G-14 and H-01 through H-13 in view of any of the references identified in the chart above.

8. '284 Patent

The Asserted Claims of the '284 Patent include various basic components and methods to control simultaneous radio connections over which digital information (*e.g.*, video data) is sent and received. These were all well known aspects of videotelephony before the time of the alleged inventions, as even the Asserted Patents suggest.

At least the following references anticipate and/or render obvious, alone or in combination with other references, the asserted claims of the '284 patent:

Exemplary Prior Art References

To the extent that Plaintiff contends that any of the references identified in Exhibits I-01–I-14 do not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background, experience with imaging systems, and/or prior art, including but not limited to one or more of the prior art references identified in the chart above.

A person of ordinary skill in the art would have been motivated to combine or modify any of the references in Exhibits I-01–I-14 and the list above to include these limitations because, for example, videotelephony systems were well known and documented in the prior art before the alleged priority date of the Asserted Patents. In fact, the claimed basic features of communication systems have been known for decades. *See, e.g.*, Section II.C, *supra*; I-01–I-14. Market forces and design incentives, for example, related to videotelephony systems make the combination of such a system with any of the references identified in Exhibits I-01–I-14 predictable to one of ordinary skill in the art.

For example, a POSITA would have found it predictable to combine the teachings of Barnes and Honkanen because both Barnes and Honkanen pertain to broadcasting digital information over different kinds of radio connections. A POSITA would have, in particular, found it obvious to use Honkanen's common control manager in Barnes's device.

A POSITA would have been motivated to use Honkanen's common control manager to implement Barnes's device that "preferably includes means" for determining best available radio connections based on bandwidth, data rate, changes in availability, and user preference. Barnes

Maxell, Ltd.
Ex. 2005
Page 375 of 431

[0064]-[0068]. Specifically, a POSITA would have been motivated to implement Honkanen's continuous connection control manager and parameter control manager, internal components of Honkanen's common control manager, into Barnes's device so as to fulfill the Barnes's preferred network switching functionality, that governs in "one or more of 1) changes in network conditions such as failure of a first network or the first network slowing down (due to high use such as multiple users and/or high levels of data being communicated), such as below a predetermined level (e.g., threshold speed), or increases in noise, 2) the user making a request, or attempting to make the request, to communicate data that is more suitable for communication through a second network (e.g., the user requesting a video file or movie), 3) the anticipated request of the user (e.g., based on the user starting a particular application such as a video player), 4) changes in network availability (e.g., a new network becoming available), 5) changes in conditions of the second network (e.g., more bandwidth or less noise), 6) the available capacity or relative available capacity (e.g., how full to capacity a network is), 7) the communication capabilities of the device, and 8) the historical (or anticipated) availability of bandwidth of network(s) (which may include, for example, use, volume, capacity, and/or speed data for days of the week or times of the day)." Barnes at [0068]; Honkanen at [0056]-[0058]. This modification would have been predictable and would have had a reasonable expectation of success because both Barnes's device and Honkanen's connection managers concern switching network connections to send data based on a variety of conditions and thus operate under the same principles and for the same purpose. Barnes at [0002]-[0004]; Honkanen at [0022]-[0027].

Further, a POSITA would have been motivated to combine the teachings from references teach and only focus on a single aspect of communication devices such as communicating via different, multiple radio connections (such as Honkanen, Dua, Barnes, Kelton) with the disclosures found in system art (such as Nokia N93, Nokia N95, Nokia 6131) as well as specifications for and further art expanding on standards (such as Bluetooth-Specification, IEEE 802.11a, IEEE 802.11g, 802.15.3, Kao, Zhang, Malyan). A POSITA looking for details on implementing multiple radio connections controlled by a single device/user would have been motivated to investigate standards and systems available at the time that already possessed capability for multiple radio connections.

Maxell, Ltd.
Ex. 2005
Page 376 of 431

For example, the Nokia N93, Nokia N95, and Nokia 6131 systems all disclose applications which a user can use to issue indications to connect to an external device or the Internet, and a POSITA would have recognized that using applications to provide user input to establish radio communication circuits like those described in references such as Honkanen, Dua, Barnes, and Kelton. Further, a POSITA looking for details regarding different frequency bands and modulation/demodulation methods would have been motivated to consult different standards and publications writing on frequency bands and modulation/demodulation methods such as IEEE 802.11a, IEEE 802.11g, IEEE 802.15.3, Kao, Malyan, and Zhang.

Modifications of the other primary references would have been obvious in a similar vein. That is, the primary references disclose apparatuses and methods for simultaneous control of multiple radio communication circuits that would have been obvious to replace with other disclosed apparatus and methods performing the same functionality in the same way. Similarly, for any of the references that do not disclose particular hardware for controlling radio connections, it would have been obvious to provide communication control measures (*e.g.*, as disclosed in Honkanen, as explained above) to provide network switching functionality in response to numerous parameters, including user preference. Further, the mixing/culling in any of the primary references would have been obvious to modify based on mixing/culling in any of the other disclosed references because such a combination involves combining elements known in the prior art according to known methods to yield a predictable result and also require a simple substitution of one or more known elements for another to obtain a predictable result. These modification, all limited to controlling multiple radio connections, involve conventional techniques implemented in known manners, and thus, would have a reasonable expectation of success. Further, adding functionality to allow the user to select a particular network (*e.g.*, as disclosed in Kelton at [0181]) to the charted references disclosing network management and user interfaces would have been obvious to try to improve a similar device in the same way. The references themselves provide teachings suggesting the benefits and feasibility of implementing priority schemes for multiple connections and user input for the same, such that a person of ordinary skill in the art would have been motivated to try to implement this known solution in a known device ready for improvement.

Maxell, Ltd.
Ex. 2005
Page 377 of 431

Accordingly, to the extent Plaintiff contends that any reference identified in Exhibits I-01–I-14 does not disclose these limitations, a person of ordinary skill in the art would have arrived at the purported invention based on their own background knowledge of one of ordinary skill in the art and/or by combining any reference identified in Exhibits I-01–I-14 in view of any of the references identified in the chart above.

E. Lack of Secondary Indicia of Nonobviousness

The Asserted Claims are further rendered obvious in light of the lack of any evidence of secondary considerations of nonobviousness. Plaintiff bears the burden with respect to any such secondary considerations, and it has not satisfied that burden to date. Moreover, for any secondary consideration to be relevant, Plaintiff must establish a nexus between the secondary consideration and the claimed inventions. *Ormco Corp. v. Align Tech., Inc.*, 463 F.3d 1299, 1312 (Fed. Cir. 2006). Plaintiff has not provided any evidence of any secondary considerations, much less any nexus between such secondary considerations and the claimed inventions of the Asserted Patents. Should Plaintiff identify such alleged secondary considerations, Defendants may respond.

In the meantime, Defendants provide the following:

- The alleged invention's commercial success: No products are known to practice the Asserted Claims. Even if products were determined to practice the Asserted Claims, their success could not be attributed to the Asserted Claims. Indeed, there is no evidence that the allegedly novel elements claimed in the Asserted Patents could possibly lead to commercial success of products, especially multi-component consumer electronic products (e.g., Laptops and Smartphone) like the products Plaintiff has accused in this case. Defendants' owe any commercial success to a wide variety of technologies and factors, which do not include any specific reference to the accused features.
- Long felt but unresolved needs / recognition of an unaddressed problem: No such long felt and unresolved need or unaddressed problem existed. To the contrary, the prior art cited above demonstrates that numerous others had already recognized and solved the needs purportedly addressed by the Asserted Patents.

Maxell, Ltd.
Ex. 2005
Page 378 of 431

- Unexpected results: No evidence of any such unexpected results or skepticism by experts is known. To the contrary, the alleged inventions claimed in the Asserted Patents are entirely preempted by the work of others and/or represent, at best, the foreseeable results of routine experimentation or optimization given the state of the art as shown by the prior art cited above.
- The failure of others: No evidence of any such failure is known. To the contrary, the prior art cited above demonstrates that numerous others had already succeeded at the same endeavor purportedly addressed by the Asserted Patents.
- Praise by others: No evidence of any such praise is known.
- Teaching away by others: No evidence of any such teaching is known. To the contrary, the prior art cited above demonstrates that numerous others had already taught *toward* the purported inventions recited in the Asserted Claims.
- Copying of the alleged invention by competitors: No evidence of any such copying is known. *See Amazon.com, Inc. v. Barnesandnoble.com, Inc.*, 239 F.3d 1343, 1366 (Fed. Cir. 2001) (allegedly copied feature must be an embodiment of the patented claims).

III. Contentions Under 35 U.S.C. § 112

Various claims of the Asserted patents are also invalid for indefiniteness, lack of enablement, and/or lack of written description under 35 U.S.C. § 112.

Defendants' contentions that the following claims are invalid under 35 U.S.C. § 112 are made in the alternative and do not constitute, and should not be interpreted as, admissions regarding the construction or scope of the claims of the Patents-In-Suit, or that any of the claims of the Patents-In-Suit are not anticipated or rendered obvious by prior art. The following contentions, made pursuant to Pat L.R. 3-3(d), are subject to revision and amendment pursuant to Federal Rule of Civil Procedure 26(e) and the Orders in this matter to the extent appropriate, including in light of further investigation and discovery regarding any defenses, the Court's construction of the claims at issue, and/or review and analysis of expert witnesses.

Maxell, Ltd.
Ex. 2005
Page 379 of 431

A. The Asserted Claims Are Invalid for Lack of Enablement and Written Description

Under 35 U.S.C. § 112, a patent must provide sufficient description of the claimed invention to permit or enable a person of ordinary skill in the art to make and use the claimed invention. As discussed below, the Asserted Claims are invalid for failure to comply with the written description and enablement requirements because the Patents-in-Suit do not contain sufficient written description of the claimed invention and do not provide a sufficiently enabling disclosure.

A patent must sufficiently disclose the invention to reasonably convey to those skilled in the art that the inventor had possession of the claimed subject matter as of the filing date. *See Ariad Pharms., Inc. v. Eli Lilly & Co.*, 598 F.3 1336, 1351 (Fed. Cir. 2010) (en banc). Under 35 U.S.C. § 112, ¶1, "[t]he specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same, and shall set forth the best mode contemplated by the inventor or joint inventor of carrying out the invention." To satisfy the written description requirement, the specification must describe the claimed invention in sufficient detail that one skilled in the art can reasonably conclude that the inventor had possession of the claimed invention at the time of filing. *Reiffin v. Microsoft Corp.*, 214 F.3d 1342, 1345 (Fed. Cir. 2000) ("The purpose of [the written description requirement] is to ensure that the scope of the right to exclude, as set forth in the claims, does not overreach the scope of the inventor's contribution to the field of art as described in the patent specification"); *Lockwood v. Am. Airlines, Inc.*, 107 F.3d 1565, 1572 (Fed. Cir. 1997) ("[A]ll limitations must appear in the specification."); *see also Ariad*, 598 F.3d at 1351-52 ("[T]he test requires an objective inquiry into the *four corners of the specification*" as "*it is the specification itself that must demonstrate possession*."); *PowerOasis, Inc. v. T-Mobile USA, Inc.*, 522 F.3d 1299, 1306-07 (Fed. Cir. 2008) ("[T]o satisfy the written description requirement, 'the missing descriptive matter *must necessarily be present in the . . . specification*[.]'"), 1310 ("Obviousness simply is not enough; subject matter must be disclosed to establish possession."); *Carnegie Mellon*

Ex. 2005
Page 380 of 431

Univ. v. Hoffmann–La Roche Inc., 541 F.3d 1115, 1122 (Fed. Cir. 2008) ("[T]he applicant must 'convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention,' and *demonstrate that by disclosure in the specification of the patent*."); *Rivera v. Int'l Trade Comm'n*, 857 F.3d 1315, 1319 (Fed. Cir. 2017) ("*The specification* of a patent as filed must 'contain a written description of the invention.'" (internal citations omitted)); *Novozymes A/S v. Dupont Nutrition Biosciences APS*, 723 F.3d 1336, 1344 (Fed. Cir. 2013) ("[T]he specification must describe an invention understandable to [a] skilled artisan and show that the inventor actually invented the invention claimed. A mere wish or plan for obtaining the claimed invention does not satisfy the written description requirement.") (internal citation, quotation marks omitted).

The enablement requirement is satisfied only if one skilled in the art can practice the invention based on the teachings of the patent without undue experimentation. *See AK Steel Corp. v. Sollac & Ugine*, 344 F.3d 1234, 1244 (Fed. Cir. 2003). Hence, a claim is invalid for lack of enablement if a POSITA would not be able to read the specification and practice the claimed invention without undue experimentation. *Amgen Inc. v. Sanofi, Aventisub LLC*, 987 F.3d 1080, 1084 (Fed. Cir. 2021). "Whether undue experimentation is needed is not a single, simple factual determination, but rather is a conclusion reached by weighing many factual considerations." *Amgen Inc.*, 987 F.3d at 1084 (internal citation, quotation marks omitted). The factual considerations, which are known as "*Wands* factors," are "(1) the quantity of experimentation necessary, (2) the amount of direction or guidance presented, (3) the presence or absence of working examples, (4) the nature of the invention, (5) the state of the prior art, (6) the relative skill of those in the art, (7) the predictability or unpredictability of the art, and (8) the breadth of the claims." *Id*. (quoting *In re Wands*, 858 F.2d 731, 736–37 (Fed. Cir. 1988)). A claimed invention may be invalid for non-enablement even if it was disclosed in the prior art: "It is the specification, not the knowledge of one skilled in the art, that must supply the novel aspects of an invention in order to constitute adequate enablement." *Genentech v. Novo Nordisk*, 108 F.3d 1361, 1366 (Fed. Cir. 1997). The patentee is "required to provide an adequate enabling disclosure in the specification; it cannot simply rely on the knowledge of a person of ordinary skill to serve as a

Maxell, Ltd.
Ex. 2005
Page 381 of 431

substitute for the missing information in the specification." *Alza Corp. v. Andrx Pharms., LLC*, 603 F.3d 935, 940-41 (Fed. Cir. 2010). "A patentee who chooses broad claim language must make sure the broad claims are fully enabled." *Sitrick v. Dreamworks, LLC*, 516 F.3d 993, 999-1000 (Fed. Cir. 2008). As the Federal Circuit has explained:

> Enablement serves the dual function in the patent system of ensuring adequate disclosure of the claimed invention and of preventing claims broader than the disclosed invention. This important doctrine prevents both inadequate disclosure of an invention and overbroad claiming that might otherwise attempt to cover more than was actually invented. Thus, a patentee chooses broad claim language at the peril of losing any claim that cannot be enabled across its full scope of coverage.

Magsil Corp. and MIT v. Hitachi, 687 F.3d 1377, 1380-81 (Fed. Cir. 2012). "The specification must contain sufficient disclosure to enable an ordinarily skilled artisan to make and use the entire scope of the claimed invention at the time of filing." *Id*. at 1381-82.

Based on the information currently available, Defendants contend that the specification of each Patent-in-Suit does not provide sufficient written description and/or enablement for each of the claim limitations identified below, thus identifying grounds of invalidity for lack of enablement and/or written description with respect to the Asserted Claims and the limitations of the Asserted Claims, pursuant to Pat. L.R. 3-3(d). Where Defendants have identified a phrase as lacking written description and/or enablement, Defendants also contend that the subparts of the phrase lack written description and/or enablement within the context recited in the claim. Although the following discussion includes the identification and discussion of claim terms and limitations lacking § 112 written description and enablement support, a more detailed basis for Defendants' written description and enablement defenses may be set forth in any expert report(s) on invalidity to be served by Defendant in accordance with the Court's Scheduling Order.

1. '760 patent

Asserted claims 4, 6, 7, and 9 of the '760 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the '760 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

Maxell, Ltd.
Ex. 2005
Page 382 of 431

- "reproducing at least a first still picture, a second still picture and a picture from a recording medium" / "reproducing at least a first still picture, a second still picture and a picture recorded on a recording medium" (e.g., '760 patent, cls. 4, 7)
- "reproducing at least a first still picture, a second still picture and a picture" / "reproducing at least a first still picture, a second still picture and a picture recorded" (e.g., '760 patent, cls. 4, 7)
- "said picture corresponds to said first and second still pictures and has a smaller number of pixels than said first and second still pictures" (e.g., '760 patent, cls. 4, 7)
- "said picture . . . has a smaller number of pixels than said first and second still pictures" (e.g., '760 patent, cls. 4, 7)
- "smaller number of pixels" (e.g., '760 patent, cls. 4, 7)
- "wherein said first still picture, said second still picture and said picture are related pictures derived from common signal data" (e.g., '760 patent, cls. 4, 7)
- "said picture are related pictures derived from common signal data" (e.g., '760 patent, cls. 4, 7)
- "related pictures derived from common signal data" (e.g., '760 patent, cls. 4, 7)
- "said picture" (e.g., '760 patent, cls. 4, 7)
- "related pictures" (e.g., '760 patent, cls. 4, 7)
- "common signal data" (e.g., '760 patent, cls. 4, 7)
- "first still picture corresponding to a selected picture" (e.g., '760 patent, cls. 4, 7)
- "first still picture corresponding to" (e.g., '760 patent, cls. 4, 7)
- "corresponding to a selected picture" (e.g., '760 patent, cls. 4, 7)
- "corresponding to" (e.g., '760 patent, cls. 4, 7)

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '760 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken

Maxell, Ltd.
Ex. 2005
Page 383 of 431

in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '760 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '760 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

2. '334 patent

Asserted claims 4 and 6 of the '334 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the '334 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- "variable amplitude amplifier" (e.g., '334 patent, cl. 4);
- "receiving a first communication signal and a transmitting power control signal from a cell-site station" (e.g., '334 patent, cl. 4);
- "generating a power control signal derived from said transmitting power control signal" (e.g., '334 patent, cl. 4);
- "voice signal code" and "voice code signal" (e.g., '334 patent, cl. 4);
- "converting said voice signal code into an audio signal" (e.g., '334 patent, cl. 4);
- "controlling said transmitter in such a manner that an open-loop power control is performed at first and then a closed-loop power control is performed according to said power control signal" (e.g., '334 patent, cl. 4);
- "control transmitted power to converge into a range required by said cell-site station" (e.g., '334 patent, cl. 4);
- "controlling said transmitter in such a manner that an open-loop power control is performed at first and then a closed-loop power control is performed according to said power control signal so as to control transmitted power to converge into a range required by said cell-site station" (e.g., '334 patent, cl. 4);

Maxell, Ltd.
Ex. 2005
Page 384 of 431

- "a function defining a relation between bias data and gain data stored in said memory" (e.g., '334 patent, cl. 4);
- "stored in said memory" (e.g., '334 patent, cl. 4)
- "controlling a gain of said variable amplitude amplifier and a bias condition of said power amplifier using a function defining a relation between bias data and gain data stored in said memory" (e.g., '334 patent, cl. 4);
- "the maximum bias voltage value" (e.g., '334 patent, cl. 4);
- "a ratio to the maximum bias voltage value" (e.g., '334 patent, cl. 4);
- "said function uses bias conditions defined in a ratio to the maximum bias voltage value" (e.g., '334 patent, cl. 4);
- "the maximum value" (e.g., '334 patent, cls. 4, 6);
- "said bias condition increases gradually to the maximum value" (e.g., '334 patent, cls. 4, 6);
- "the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4);
- "when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4);
- "output intensity increases to the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4)
- "said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4);
- "said function uses bias conditions defined in a ratio to the maximum bias voltage value and that said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4);
- "controlling a gain of said variable amplitude amplifier and a bias condition of said power amplifier using a function defining a relation between bias data and gain data

Maxell, Ltd.
Ex. 2005
Page 385 of 431

stored in said memory, in such a manner that said function uses bias conditions defined in a ratio to the maximum bias voltage value and that said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4);

- "said bias condition increases gradually to the maximum value when said output intensity increases within the range of −50 dB to 0 dB" (e.g., '334 patent, cl. 6);
- "when said output intensity increases within the range of −50 dB to 0 dB" (e.g., '334 patent, cl. 6).

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '334 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '334 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '334 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

Furthermore, to the extent that Plaintiff is attempting to improperly broaden the scope of this claim to read on products that are not cellular telephones used in a CDMA system (for example, by reading out the preamble as non-limiting), the patent specification does not provide a written description of the claimed elements for telephones that are not used in a CDMA system or for portable devices that are not telephones that suggest that the alleged inventors were in possession of the claimed invention, and would enable a person of ordinary skill in the art to create such invention for non-CDMA telephones or for non-telephone products.

Page 386 of 431

3. ’821 patent

Asserted claim 6 of the ’821 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the ’821 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- “white balance control means for detecting an achromatic portion of an image of an object on the basis of chrominance signals formed from an output signal that is obtained from an image pickup device via an optical system and indicative of said object image, controlling gains of said chrominance signals in accordance with a deviation amount of white balance detected from said achromatic portion, and controlling the white balance” (e.g., ’821 patent, cl. 6)
- “white balance control means” (e.g., ’821 patent, cl. 6)
- “white balance control means for detecting an achromatic portion of an image of an object on the basis of chrominance signals” (e.g., ’821 patent, cl. 6)
- “detecting an achromatic portion of an image of an object on the basis of chrominance signals” (e.g., ’821 patent, cl. 6)
- “chrominance signals formed from an output signal that is obtained from an image pickup device via an optical system and indicative of said object image” (e.g., ’821 patent, cl. 6)
- “an output signal that is obtained from an image pickup device via an optical system” (e.g., ’821 patent, cl. 6)
- “an optical system” (e.g., ’821 patent, cl. 6)
- “white balance control means for . . . controlling gains of said chrominance signals in accordance with a deviation amount of white balance detected from said achromatic portion” (e.g., ’821 patent, cl. 6)
- “controlling gains of said chrominance signals in accordance with a deviation amount of white balance detected from said achromatic portion” (e.g., ’821 patent, cl. 6)

Maxell, Ltd.
Ex. 2005
Page 387 of 431

- "controlling gains of said chrominance signals" (e.g., '821 patent, cl. 6)
- "a deviation amount of white balance detected from said achromatic portion" (e.g., '821 patent, cl. 6)
- "a deviation amount of white balance" (e.g., '821 patent, cl. 6)
- "detected from said achromatic portion" (e.g., '821 patent, cl. 6)
- "white balance control means for . . . controlling the white balance" (e.g., '821 patent, cl. 6)
- "controlling the white balance" (e.g., '821 patent, cl. 6)
- "object distance detecting means for detecting a distance to the object and outputting object distance detection information" (e.g., '821 patent, cl. 6)
- "object distance detecting means" (e.g., '821 patent, cl. 6)
- "detecting a distance to the object and outputting object distance detection information" (e.g., '821 patent, cl. 6)
- "detecting a distance to the object" (e.g., '821 patent, cl. 6)
- "outputting object distance detection information" (e.g., '821 patent, cl. 6)
- "zoom value detecting means for detecting a zoom value of said optical system and outputting zoom value information" (e.g., '821 patent, cl. 6)
- "zoom value detecting means" (e.g., '821 patent, cl. 6)
- "detecting a zoom value of said optical system and outputting zoom value information" (e.g., '821 patent, cl. 6)
- "detecting a zoom value of said optical system" (e.g., '821 patent, cl. 6)
- "outputting zoom value information" (e.g., '821 patent, cl. 6)
- "executes a correcting operation of the white balance deviation" (e.g., '821 patent, cl. 6)
- "forming a white balance control amount adjustment value to adjust a white balance control amount for the gains of said white balance control means on the basis of said object brightness information, said object distance detection information which is output from said object distance detecting means, and said zoom value

Maxell, Ltd.
Ex. 2005
Page 388 of 431

information which is output from said zoom value detecting means" (e.g., '821 patent, cl. 6)

- "forming a white balance control amount adjustment value to adjust a white balance control amount for the gains of said white balance control means" (e.g., '821 patent, cl. 6)
- "forming a white balance control amount adjustment value" (e.g., '821 patent, cl. 6)
- "adjust a white balance control amount for the gains of said white balance control means on the basis of said object brightness information" (e.g., '821 patent, cl. 6)
- "adjust a white balance control amount for the gains of said white balance control means" (e.g., '821 patent, cl. 6)
- "adjust a white balance control amount" (e.g., '821 patent, cl. 6)
- "gains of said white balance control means" (e.g., '821 patent, cl. 6)
- "the gains of said white balance control means on the basis of said object brightness information" (e.g., '821 patent, cl. 6)
- "on the basis of said object brightness information, said object distance detection information which is output from said object distance detecting means, and said zoom value information which is output from said zoom value detecting means" (e.g., '821 patent, cl. 6)
- "said object distance detection information which is output from said object distance detecting means" (e.g., '821 patent, cl. 6)
- "said zoom value information which is output from said zoom value detecting means" (e.g., '821 patent, cl. 6)
- "wherein the white balance control amount is adjusted on the basis of said white balance control amount adjustment value" (e.g., '821 patent, cl. 6)
- "on the basis of said white balance control amount adjustment value" (e.g., '821 patent, cl. 6)

Maxell, Ltd.
Ex. 2005
Page 389 of 431

- "wherein as said white balance control amount adjustment value, an object distance threshold value for discriminating a magnitude of the distance to the object is formed on the basis of said object brightness information and said zoom value information, said object distance detection information is compared with said object distance threshold value information, thereby obtaining said white balance control amount adjustment value according to a result of the comparison" (e.g., '821 patent, cl. 6)
- "wherein as said white balance control amount adjustment value, an object distance threshold value for discriminating a magnitude of the distance to the object is formed on the basis of said object brightness information and said zoom value information" (e.g., '821 patent, cl. 6)
- "wherein as said white balance control amount adjustment value, an object distance threshold value" (e.g., '821 patent, cl. 6)
- "wherein as said white balance control amount adjustment value" (e.g., '821 patent, cl. 6)
- "an object distance threshold value for discriminating a magnitude of the distance to the object is formed on the basis of said object brightness information and said zoom value information" (e.g., '821 patent, cl. 6)
- "an object distance threshold value for discriminating a magnitude of the distance to the object" (e.g., '821 patent, cl. 6)
- "discriminating a magnitude of the distance to the object" (e.g., '821 patent, cl. 6)
- "wan object distance threshold value for discriminating a magnitude of the distance to the object is formed" (e.g., '821 patent, cl. 6)
- "is formed on the basis of said object brightness information and said zoom value information" (e.g., '821 patent, cl. 6)
- "on the basis of said object brightness information and said zoom value information" (e.g., '821 patent, cl. 6)

Maxell, Ltd.
Ex. 2005
Page 390 of 431

- "said object distance detection information is compared with said object distance threshold value information, thereby obtaining said white balance control amount adjustment value according to a result of the comparison" (e.g., '821 patent, cl. 6)
- "said object distance detection information is compared with said object distance threshold value information" (e.g., '821 patent, cl. 6)
- "thereby obtaining said white balance control amount adjustment value according to a result of the comparison" (e.g., '821 patent, cl. 6)
- "obtaining said white balance control amount adjustment value according to a result of the comparison" (e.g., '821 patent, cl. 6)

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '821 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '821 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '821 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

4. '188 patent

Asserted claims 4, 5 and 6 of the '188 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the '188 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- "a deciding process for deciding whether a thumbnail image can be changed or not based on change permission information indicating whether a change can be made on the thumbnail image showing contents of recorded information which includes

Maxell, Ltd.
Ex. 2005
Page 391 of 431

at least image information and is recorded on a recording medium" (e.g., '188 patent, cl. 4)

- "a deciding process for deciding whether a thumbnail image can be changed or not" (e.g., '188 patent, cl. 4)
- "a deciding process for deciding" (e.g., '188 patent, cl. 4)
- "a deciding process" (e.g., '188 patent, cl. 4)
- "process" (e.g., '188 patent, cl. 4)
- "changed" (e.g., '188 patent, cl. 4)
- "based on change permission information indicating whether a change can be made on the thumbnail image showing contents of recorded information which includes at least image information and is recorded on a recording medium" (e.g., '188 patent, cl. 4)
- "change permission information indicating whether a change can be made on the thumbnail image showing contents of recorded information which includes at least image information and is recorded on a recording medium" (e.g., '188 patent, cl. 4)
- "whether a change can be made on the thumbnail image showing contents of recorded information which includes at least image information and is recorded on a recording medium" (e.g., '188 patent, cl. 4)
- "whether a change can be made on the thumbnail image" (e.g., '188 patent, cl. 4)
- "a change can be made on the thumbnail" (e.g., '188 patent, cl. 4)
- "on the thumbnail" (e.g., '188 patent, cl. 4)
- "change permission information indicating whether a change can be made on the thumbnail image" (e.g., '188 patent, cl. 4)
- "change permission information" (e.g., '188 patent, cl. 4)
- "the thumbnail image showing contents of recorded information which includes at least image information and is recorded on a recording medium" (e.g., '188 patent, cl. 4)

Maxell, Ltd.
Ex. 2005
Page 392 of 431

- "contents of recorded information which includes at least image information and is recorded on a recording medium" (e.g., '188 patent, cl. 4)
- "contents of recorded information" (e.g., '188 patent, cl. 4)
- "recorded information" (e.g., '188 patent, cl. 4)
- "recorded information which includes at least image information and is recorded on a recording medium" (e.g., '188 patent, cl. 4)
- "a change prohibiting process for prohibiting a change of the thumbnail image when the deciding device decides that a change is not permitted" (e.g., '188 patent, cl. 4)
- "a change prohibiting process for prohibiting a change of the thumbnail image" (e.g., '188 patent, cl. 4)
- "a change prohibiting device for prohibiting" (e.g., '188 patent, cl. 4)
- "a change prohibiting device" (e.g., '188 patent, cl. 4)
- "a change of the thumbnail image when the deciding device decides that a change is not permitted" (e.g., '188 patent, cl. 4)
- "when the deciding device decides that a change is not permitted" (e.g., '188 patent, cl. 4)
- "deciding device decides" (e.g., '188 patent, cl. 4)
- "wherein editing is performed on a reproduced form of the recorded information recorded on the recording medium" (e.g., '188 patent, cl. 4)
- "editing is performed on a reproduced form of the recorded information recorded on the recording medium" (e.g., '188 patent, cl. 4)
- "editing is performed on a reproduced form of the recorded information" (e.g., '188 patent, cl. 4)
- "reproduced form of the recorded information recorded on the recording medium" (e.g., '188 patent, cl. 4)
- "recording medium" (e.g., '188 patent, cl. 4)

Maxell, Ltd.
Ex. 2005
Page 393 of 431

- "a generating process which generates a display signal for displaying a warning indicating that the thumbnail image cannot be changed when the deciding device decides that a change is not permitted" (e.g., '188 patent, cl. 5)
- "a generating process" (e.g., '188 patent, cl. 5)
- "when the deciding device decides that a change is not permitted" (e.g., '188 patent, cl. 5)
- "when the deciding device decides" (e.g., '188 patent, cl. 5)
- "a generating process which generates a display signal for displaying a warning indicating that the thumbnail image cannot be changed w" (e.g., '188 patent, cl. 5)
- "a changing process for changing the thumbnail image when the deciding device decides, instead of the change prohibiting device, that a change is permitted" (e.g., '188 patent cl. 6)
- "a changing process for changing the thumbnail image" (e.g., '188 patent cl. 6)
- "changing the thumbnail image when the deciding device decides, instead of the change prohibiting device, that a change is permitted" (e.g., '188 patent cl. 6)
- "the change prohibiting device" (e.g., '188 patent cl. 6)
- "deciding device decides, instead of the change prohibiting device," (e.g., '188 patent, cl. 6)

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '188 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '188 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement

Maxell, Ltd.
Ex. 2005
Page 394 of 431

Contentions, the ’188 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

5. ’493 patent

Asserted claims 10, 12, 13, and 14 of the ’493 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the ’493 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- “A method for operating an electric camera, … the method comprising: selecting between a static image mode and a moving video mode, and when in the static image mode, selecting an operation from a list…, upon selecting the operation of recording the image in the static image mode, … upon selecting the operation of monitoring the image in the static image mode …, upon selecting the operation of recording the image in the moving video mode…” (e.g., ’493 patent, cl. 10)
- “signal processing unit that generates image signals by processing the output signals of the image sensing device” (e.g., ’493 patent, cl. 10)
- “signal processing unit” (e.g., ’493 patent, cl. 10)
- “the electric camera includes … a display unit with a display screen that displays an image corresponding to the image signals” (e.g., ’493 patent, cl. 10)
- “a display unit” (e.g., ’493 patent, cl. 10)
- “a display unit with a display screen” (e.g., ’493 patent, cl. 10)
- “a display unit with a display screen that displays an image corresponding to the image signals” (e.g., ’493 patent, cl. 10)
- “selecting between a static image mode and a moving video mode” (’493 patent, cl. 10)
- “when in the static image mode, selecting an operation from a list including (1) recording the image in the static image mode, and (2) monitoring the image in the static image mode” (e.g., ’493 patent, cl. 10)

Maxell, Ltd.
Ex. 2005
Page 395 of 431

- "when in the static image mode, selecting an operation from a list" (e.g., '493 patent, cl. 10)
- "selecting an operation from a list including (1) recording the image in the static image mode, and (2) monitoring the image in the static image mode" (e.g., '493 patent, cl. 10)
- "a list including (1) recording the image in the static image mode, and (2) monitoring the image in the static image mode" (e.g., '493 patent, cl. 10)
- "upon selecting the operation of recording the image in the static image mode, using the signal processing unit to generate the image signals by using all signal charges accumulated in all N number of vertically arranged pixel lines of the image sensing device, to provide N pixel lines" (e.g., '493 patent, cl. 10)
- "upon selecting the operation of recording the image in the static image mode" (e.g., '493 patent, cl. 10)
- "using the signal processing unit to generate the image signals by using all signal charges accumulated in all N number of vertically arranged pixel lines of the image sensing device, to provide N pixel lines" (e.g., '493 patent, cl. 10)
- "by using all signal charges accumulated in all N number of vertically arranged pixel lines of the image sensing device" (e.g., '493 patent, cl. 10)
- "all signal charges accumulated in all N number of vertically arranged pixel lines" (e.g., '493 patent, cl. 10)
- "upon selecting the operation of monitoring the image in the static image mode, using the signal processing unit to generate the image signals by using pixel lines which have been mixed or culled from the N number of vertically arranged pixel lines of the image sensing device to provide only pixel lines separated from one another by intervals of a given distance" (e.g., '493 patent, cl. 10)
- "upon selecting the operation of monitoring the image in the static image mode" (e.g., '493 patent, cl. 10)

Maxell, Ltd.
Ex. 2005
Page 396 of 431

- "using the signal processing unit to generate the image signals by using pixel lines which have been mixed or culled from the N number of vertically arranged pixel lines of the image sensing device to provide only pixel lines separated from one another by intervals of a given distance" (e.g., '493 patent, cl. 10)
- "using pixel lines which have been mixed or culled from the N number of vertically arranged pixel lines of the image sensing device" (e.g., '493 patent, cl. 10)
- "provide only pixel lines separated from one another by intervals of a given distance" (e.g., '493 patent, cl. 10)
- "upon selecting the operation of recording the image in the moving video mode, using the signal processing unit to generate the image signals by using a portion of, or the entirety of, the N number of vertically arranged pixel lines which have been mixed or culled to provide only pixel lines separated from one another by intervals of a second distance, wherein a value of the second distance is different from a value of the first distance" (e.g., '493 patent, cl. 10)
- "upon selecting the operation of recording the image in the moving video mode" (e.g., '493 patent, cl. 10)
- "using the signal processing unit to generate the image signals by using a portion of, or the entirety of, the N number of vertically arranged pixel lines which have been mixed or culled to provide only pixel lines separated from one another by intervals of a second distance" (e.g., '493 patent, cl. 10)
- "using a portion of, or the entirety of, the N number of vertically arranged pixel lines" (e.g., '493 patent, cl. 10)
- "the N number of vertically arranged pixel lines which have been mixed or culled" (e.g., '493 patent, cl. 10)
- "provide only pixel lines separated from one another by intervals of a second distance" (e.g., '493 patent, cl. 10)
- "wherein a value of the second distance is different from a value of the first distance" (e.g., '493 patent, cl. 10)

Maxell, Ltd.
Ex. 2005
Page 397 of 431

- "wherein the value of the first distance is larger than the value of the second distance" (e.g., '493 patent, cl. 12)
- "wherein N is equal to or greater than a product of a fixed parameter multiplied by a number of effective scanning lines M of the display screen" (e.g., '493 patent, cl. 13)
- "fixed parameter" (e.g., '493 patent, cl. 13)

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '493 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '493 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '493 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

6. '729 patent

Asserted claims 3 and 4 of the '729 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the '729 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- "A method for operating a camera … comprising the steps of: selecting between a static image mode and a moving video mode; and selecting an operation from a list of operations, as follows: when in the static image mode, selecting an operation from a list of operations including: a monitoring of an image in the static image mode, and a recording of an image in the static image mode, and when in the

Maxell, Ltd.
Ex. 2005
Page 398 of 431

moving video mode, selecting an operation from a list of operations including: a recording of an image in the moving video mode" (e.g., '729 patent, cl. 3)

- "the camera including … signal processing unit configured to form image signals at a predetermined view angle by using effective pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "signal processing unit configured to form image signals at a predetermined view angle by using effective pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "signal processing unit" (e.g., '729 patent, cl. 3)
- "a predetermined view angle" (e.g., '729 patent, cl. 3)
- "using effective pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "the camera including…a display unit configured to display an image corresponding to the image signals formed by the signal processing unit" (e.g., '729 patent, cl. 3)
- "display unit configured to display an image corresponding to the image signals formed by the signal processing unit" (e.g., '729 patent, cl. 3)
- "display unit" (e.g., '729 patent, cl. 3)
- "the camera including … an image-instability detector configured to detect an amount of image-instability of the camera" (e.g., '729 patent, cl. 3)
- "an image-instability detector configured to detect an amount of image-instability of the camera" (e.g., '729 patent, cl. 3)
- "image-instability detector" (e.g., '729 patent, cl. 3)
- "an amount of image-instability of the camera" (e.g., '729 patent, cl. 3)
- "selecting between a static image mode and a moving video mode" (e.g., '729 patent, cl. 3)
- "selecting an operation from a list of operations, as follows: when in the static image mode, selecting an operation from a list of operations including: a monitoring of an image in the static image mode, and a recording of an image in the static

Maxell, Ltd.
Ex. 2005
Page 399 of 431

image mode, and when in the moving video mode, selecting an operation from a list of operations including: a recording of an image in the moving video mode" (e.g., '729 patent, cl. 3)

- "selecting an operation from a list of operations, as follows:" (e.g., '729 patent, cl. 3)
- "when in the static image mode, selecting an operation from a list of operations including: a monitoring of an image in the static image mode, and a recording of an image in the static image mode" (e.g., '729 patent, cl. 3)
- "when in the static image mode, selecting an operation from a list of operations" (e.g., '729 patent, cl. 3)
- "when in the moving video mode, selecting an operation from a list of operations including: a recording of an image in the moving video mode" (e.g., '729 patent, cl. 3)
- "when in the moving video mode, selecting an operation from a list of operations" (e.g., '729 patent, cl. 3)
- "wherein when the selected operation is the monitoring of an image in the static image mode, the signal processing unit forms image signals with a first view angle, by using a first effective set of pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "when the selected operation is the monitoring of an image in the static image mode" (e.g., '729 patent, cl. 3)
- "the signal processing unit forms image signals with a first view angle, by using a first effective set of pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "the signal processing unit forms image signals with a first view angle" (e.g., '729 patent, cl. 3)
- "form image signals with a first view angle, by using a first effective set of pixels of the image sensing device" (e.g., '729 patent, cl. 3)

Maxell, Ltd.
Ex. 2005
Page 400 of 431

- "using a first effective set of pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "wherein when the selected operation is the recording of an image in the static image mode, the signal processing unit forms image signals by using all effective pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "when the selected operation is the recording of an image in the static image mode" (e.g., '729 patent, cl. 3)
- "the signal processing unit forms image signals by using all effective pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "all effective pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "wherein when the selected operation is the recording of an image in the moving video mode, the signal processing unit forms image signals with a second view angle, different from the first view angle, by using a second effective set of pixels which is a portion of the array of pixels of the image sensing device, a position of the second effective set of pixels being changed according to the amount of image-instability detected by the image-instability detector, in order to correct the image-instability" (e.g., '729 patent, cl. 3)
- "when the selected operation is the recording of an image in the moving video mode" (e.g., '729 patent, cl. 3)
- "the signal processing unit forms image signals with a second view angle, different from the first view angle, by using a second effective set of pixels which is a portion of the array of pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "a second effective set of pixels which is a portion of the array of pixels of the image sensing device" (e.g., '729 patent, cl. 3)
- "a position of the second effective set of pixels being changed according to the amount of image-instability detected by the image-instability detector, in order to correct the image-instability" (e.g., '729 patent, cl. 3)

Maxell, Ltd.
Ex. 2005
Page 401 of 431

- "a position of the second effective set of pixels being changed according to the amount of image-instability detected by the image-instability detector" (e.g., '729 patent, cl. 3)
- "a position of the second effective set of pixels being changed" (e.g., '729 patent, cl. 3)
- "changed according to the amount of image-instability detected by the image-instability detector" (e.g., '729 patent, cl. 3)
- "wherein the first view angle is larger than the second view angle" (e.g., '729 patent, cl. 4)

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '729 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '729 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '729 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

7. '449 patent

Asserted claims 9, 10, 11, and 12 of the '449 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the '449 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- "outputting, by an output unit, a menu display for a user to select one group of video information among a plurality of groups of video information by specifying a

Maxell, Ltd.
Ex. 2005
Page 402 of 431

position of a character corresponding to the one group of video information" (e.g., '449 patent, cls. 9)

- "outputting, by an output unit, a menu display for a user to select one group of video information among a plurality of groups of video information" (e.g., '449 patent, cls. 9)
- "select one group of video information among a plurality of groups of video information" (e.g., '449 patent, cls. 9)
- "select one group of video information among a plurality of groups of video information by specifying a position of a character corresponding to the one group of video information" (e.g., '449 patent, cls. 9)
- "controlling, by a controller, the output unit to display a first group of thumbnails corresponding to the first group of video information, when a first group of video information is selected in the menu display by specifying a position of a character corresponding to the first group of video information" (e.g., '449 patent, cls. 9)
- "controlling, by a controller, the output unit to display a first group of thumbnails corresponding to the first group of video information" (e.g., '449 patent, cls. 9)
- "controlling, by a controller, the output unit to display a first group of thumbnails … by specifying a position of a character corresponding to the first group of video information" (e.g., '449 patent, cls. 9)
- "controlling, by a controller, the output unit to display a second group of thumbnails corresponding to the second group of video information, when a second group of video information is selected in the menu display by specifying a position of a character corresponding to the second group of video information" (e.g., '449 patent, cls. 9)
- "controlling, by a controller, the output unit to display a second group of thumbnails corresponding to the second group of video information" (e.g., '449 patent, cls. 9)

Maxell, Ltd.
Ex. 2005
Page 403 of 431

- "controlling, by a controller, the output unit to display a second group of thumbnails … by specifying a position of a character corresponding to the second group of video information" (e.g., '449 patent, cls. 9)
- "video information" (e.g., '449 patent, cls. 9, 10, and 12)
- "specifying a position of a character corresponding to the [one/first/second] group of video information" (e.g., '449 patent, cls. 9)
- "specifying a position of a character" (e.g., '449 patent, cls. 9)
- "when one video information recorded on the recording medium that is included in both the first group of video information and the second group of video information is deleted from the first group of video information, the controller continues to include the one video information in the second group of video information, and a thumbnail corresponding to the one video information is displayed as one of the thumbnails of the second group of thumbnails when the controller controls the output unit to display the second group of thumbnails" (e.g., '449 patent, cls. 9)
- "when one video information recorded on the recording medium that is included in both the first group of video information and the second group of video information is deleted from the first group of video information" (e.g., '449 patent, cls. 9)
- "the controller continues to include the one video information in the second group of video information" (e.g., '449 patent, cls. 9)
- "a thumbnail corresponding to the one video information is displayed as one of the thumbnails of the second group of thumbnails when the controller controls the output unit to display the second group of thumbnails" (e.g., '449 patent, cls. 9)
- "removes the one video information from the first group of video information" (e.g., '449 patent, cls. 12)

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '449 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken

Maxell, Ltd.
Ex. 2005
Page 404 of 431

in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '449 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '449 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

8. '072 patent

Asserted claims 11, 12, 13, 14, and 15 of the '072 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the '072 patent fails to provide an adequate written description and/or enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- "outputting a menu display for a user to select one group of video data among a plurality of groups of video data by specifying a position of a character corresponding to the one group of video data" (e.g., '072 patent, cls. 11)
- "outputting a menu display for a user to select one group of video data among a plurality of groups of video data" (e.g., '072 patent, cls. 11)
- "outputting a menu display for a user to select one group of video data" (e.g., '072 patent, cls. 11)
- "to select one group of video data among a plurality of groups of video data by specifying a position of a character corresponding to the one group of video data" (e.g., '072 patent, cls. 11)
- "to select one group of video data among a plurality of groups of video data" (e.g., '072 patent, cls. 11)
- "controlling display, when a first group of video data is selected in the menu display by specifying a position of a character corresponding to the first group of video data, a first group of thumbnails corresponding to the first group of video data in a

Maxell, Ltd.
Ex. 2005
Page 405 of 431

state that the order of the first group of thumbnails is editable" (e.g., '072 patent, cls. 11)

- "controlling display, when a first group of video data is selected in the menu display by specifying a position of a character corresponding to the first group of video data" (e.g., '072 patent, cls. 11)
- "a first group of thumbnails corresponding to the first group of video data in a state that the order of the first group of thumbnails is editable" (e.g., '072 patent, cls. 11)
- "controlling to display, when a second group of video data is selected in the menu display by specifying a position of a character corresponding to the second group of video data, a second group of thumbnails corresponding to the second group of video data in a state that the order of the second group of thumbnails is editable" (e.g., '072 patent, cls. 11)
- "controlling to display, when a second group of video data is selected in the menu display by specifying a position of a character corresponding to the second group of video data" (e.g., '072 patent, cls. 11)
- "a second group of thumbnails corresponding to the second group of video data in a state that the order of the second group of thumbnails is editable" (e.g., '072 patent, cls. 11)
- "specifying a position of a character corresponding to the [one/first/second] group of video data" (e.g., '072 patent, cls. 11)
- "when one video data recorded on the recording medium that is included in both the first group of video data and the second group of video data is deleted from the first group of video data, the controller continues to include the one video data in the second group of video data, and a thumbnail corresponding to the one video data is displayed as one of the thumbnails of the second group of thumbnails when the controller controls to display the second group of thumbnails" (e.g., '072 patent, cls. 11)

Maxell, Ltd.
Ex. 2005
Page 406 of 431

- "when one video data recorded on the recording medium that is included in both the first group of video data and the second group of video data is deleted from the first group of video data" (e.g., '072 patent, cls. 11)
- "the controller continues to include the one video data in the second group of video data" (e.g., '072 patent, cls. 11)
- "a thumbnail corresponding to the one video data is displayed as one of the thumbnails of the second group of thumbnails when the controller controls to display the second group of thumbnails" (e.g., '072 patent, cls. 11)
- "video data" (e.g., '072 patent, cls. 11-13, 15)
- "encoding inputted video data with an encoder" (e.g., '072 patent, cls. 12)
- "encoding" / "encoder" / "encoded" (e.g., '072 patent, cls. 12)
- "removes the one video data from the first group of video data" (e.g., '072 patent, cls. 15)

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '072 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '072 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '072 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

9. '284 patent

Asserted claims 18, 19, and 20 of the '284 patent fail to satisfy the requirements of 35 U.S.C. § 112 at least because the '284 patent fails to provide an adequate written description and/or

Maxell, Ltd.
Ex. 2005
Page 407 of 431

enablement of the following limitations, at least as those limitations are applied by Plaintiff in its Infringement Contentions:

- "connecting, via a second radio communication circuit, to an internet or a home network" (*e.g.*, '284 pat. at cl. 18);
- "connecting" (*e.g.*, '284 pat. at cl. 18);
- "receiving digital information" (*e.g.*, '284 pat. at cl. 18);
- "controlling each of the first and second radio communication circuits such that the first radio communication circuit transmits digital video information to the external apparatus and the second radio communication circuit connects to the internet or the home network simultaneously" (*e.g.*, '284 pat. at cl. 18);
- "controlling each of the first and second radio communication circuits" (*e.g.*, '284 pat. at cl. 18);
- "controlling" (*e.g.*, '284 pat. at cl. 18);
- "the second radio communication circuit connects to the internet or the home network simultaneously" (*e.g.*, '284 pat. at cl. 18);
- "connects to the internet or the home network" (*e.g.*, '284 pat. at cl. 18);
- "connects to the internet or the home network simultaneously" (*e.g.*, '284 pat. at cl. 18);
- "controlling assignment between the first radio communication circuit and the external apparatus, and assignment between the second radio communication circuit and the internet or the home network" (*e.g.*, '284 pat. at cl. 18);
- "controlling assignment" (*e.g.*, '284 pat. at cl. 18);
- "assignment between the first radio communication circuit and the external apparatus" (*e.g.*, '284 pat. at cl. 18);
- "assignment between the second radio communication circuit and the internet or the home network" (*e.g.*, '284 pat. at cl. 18);
- "assignment" (*e.g.*, '284 pat. at cl. 18);

Maxell, Ltd.
Ex. 2005
Page 408 of 431

- "controlling the assignment such that the assignment between the first radio communication circuit and the external apparatus is prioritized more than the assignment between the second radio communication circuit and the internet or the home network when a user issues an indication to transmit digital video information by the first radio communication circuit while acquiring information from the internet or the home network by the second radio communication circuit" (*e.g.*, '284 pat. at cl. 18);
- "controlling the assignment" (*e.g.*, '284 pat. at cl. 18);
- "is prioritized more than" (*e.g.*, '284 pat. at cl. 18);
- "is prioritized" (*e.g.*, '284 pat. at cl. 18);
- "prioritized more than" (*e.g.*, '284 pat. at cl. 18);
- "prioritized" (*e.g.*, '284 pat. at cl. 18); and
- "when a user issues an indication to transmit digital video information by the first radio communication circuit while acquiring information from the internet or the home network by the second radio communication circuit" (e.g., '284 pat. at cl. 18).

The foregoing terms, phrases, and/or limitations are not described in such a way that a person having ordinary skill in the art at the time of the alleged invention would have understood that the individuals named as the inventors on the face of the '284 patent were in possession of the claimed subject matter, at least to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions. Furthermore, to the extent the claims are interpreted consistently with the positions taken in Plaintiff's Infringement Contentions, the '284 patent fails to teach a person of ordinary skill in the art how to make and use the full scope of the claimed invention without undue experimentation with respect to foregoing phrases. To the extent the claims are construed or interpreted to be as broad as the positions taken in Plaintiff's Infringement Contentions, the '284 patent does not provide adequate written description or enable the full scope of the claim limitations listed above.

Page 409 of 431

B. The Asserted Claims Are Invalid because the Asserted Claims do not Particularly Point Out and Distinctly Claim the Subject Matter which the Inventor Regards as the Invention

One or more terms of the Asserted Claims may suffer from defects that render them indefinite, as those claims are applied by Plaintiff in its Infringement Contentions. Under § 112, ¶ 2, "a patent is invalid for indefiniteness if its claims, read in light of the specification delineating the patent, and the prosecution history, fail to inform, with reasonable certainty, those skilled in the art about the scope of the invention." *Nautilus, Inc. v. Biosig Instruments, Inc.*, 572 U.S. 898, 901 (2014). A separate and additional requirement of § 112, ¶ 2 requires the claims of the patent cover "the subject matter which the inventor or joint inventor regards as his invention." *Solomon v. Kimberly-Clark Corp.*, 216 F.3d 1372, 1377 (Fed. Cir. 2000).

Based on the information currently available, the Asserted Claims fail to inform those skilled in the art about the scope of the invention with reasonable certainty under § 112, ¶ 2, due to, at least, the following phrases. A more detailed basis for Defendants' indefiniteness defenses may be set forth in any expert report(s) on invalidity to be served in accordance with the Court's Scheduling Order and/or at an appropriate later stage of this lawsuit, such as claim construction. To the extent that Defendants has identified any instance of a term or limitation in a particular claim as rendering the claim invalid as indefinite, Defendants contend that every instance of the challenged term or limitation in each Asserted Claim renders the claim invalid for the same reason.

1. '760 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the '760 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- "first still picture corresponding to a selected picture" (e.g., '760 patent, cls. 4, 7) because the limitation's outer boundaries are unclear; and
- "selected picture" (e.g., '760 patent, cls. 4, 7) because the limitation's outer boundaries are unclear.

Maxell, Ltd.
Ex. 2005
Page 410 of 431

2. ’334 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the ’334 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- “a power control signal derived from said transmitting power control signal” (e.g., ’334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- “said first communication signal received from a cell-site station” (e.g., ’334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- “voice signal code” and “voice code signal” (e.g., ’334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of these terms;
- “said cellular telephone” (e.g., ’334 patent, cl. 4) if the preamble is not limiting because, in that case, this term would lack antecedent basis;
- “said transmitter” (e.g., ’334 patent, cl. 4) if the preamble is not limiting because, in that case, this term would lack antecedent basis;
- “an open-loop power control is performed” (e.g., ’334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- “a closed-loop power control is performed” (e.g., ’334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- “controlling said transmitter in such a manner that an open-loop power control is performed at first and then a closed-loop power control is performed according to said power control signal” (e.g., ’334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- “converge into a range” (e.g., ’334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;

Maxell, Ltd.
Ex. 2005
Page 411 of 431

- "so as to control transmitted power to converge into a range required by said cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "controlling said transmitter in such a manner that an open-loop power control is performed at first and then a closed-loop power control is performed according to said power control signal so as to control transmitted power to converge into a range required by said cell-site station" because a POSITA would not have understood the scope and meaning of this term;
- "said variable amplitude amplifier" (e.g., '334 patent, cl. 4) if the preamble is not limiting because, in that case, this term would lack antecedent basis;
- "said power amplifier" (e.g., '334 patent, cl. 4) if the preamble is not limiting because, in that case, this term would lack antecedent basis;
- "a function defining a relation between bias data and gain data" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "said memory" (e.g., '334 patent, cl. 4) because this term lacks antecedent basis;
- "a function defining a relation between bias data and gain data stored in said memory" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "controlling a gain of said variable amplitude amplifier and a bias condition of said power amplifier using a function defining a relation between bias data and gain data stored in said memory" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "bias conditions defined in a ratio" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "the maximum bias voltage value" (e.g., '334 patent, cl. 4) because this term lacks antecedent basis and a POSITA would not have understood the scope and meaning of this term;

Maxell, Ltd.
Ex. 2005
Page 412 of 431

- "a ratio to the maximum bias voltage value" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "bias conditions defined in a ratio to the maximum bias voltage value" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "said function uses bias conditions defined in a ratio to the maximum bias voltage value" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "said bias condition" (e.g., '334 patent, cls. 4, 6) because a POSITA would not have understood which of the prior claimed "bias condition[s]" this term refers to;
- "gradually" (e.g., '334 patent, cls. 4, 6) because a POSITA would not have understood the scope and meaning of this term;
- "said bias condition increases gradually" (e.g., '334 patent, cls. 4, 6) because a POSITA would not have understood the scope and meaning of this term;
- "the maximum value" (e.g., '334 patent, cls. 4, 6) because this term lacks antecedent basis and a POSITA would not have understood the scope and meaning of this term;
- "increases gradually to the maximum value" (e.g., '334 patent, cls. 4, 6) because a POSITA would not have understood the scope and meaning of this term;
- "said bias condition increases gradually to the maximum value" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "the value" (e.g., '334 patent, cl. 4) because this term lacks antecedent basis and a POSITA would not have understood the scope and meaning of this term;
- "very far" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;

Maxell, Ltd.
Ex. 2005
Page 413 of 431

- "said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "the cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood which of the prior claimed "cell-site station[s]" this term refers to;
- "the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "output intensity increases to the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very from the cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "in such a manner that said function uses bias conditions defined in a ratio to the maximum bias voltage value and that said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;
- "controlling a gain of said variable amplitude amplifier and a bias condition of said power amplifier using a function defining a relation between bias data and gain data stored in said memory, in such a manner that said function uses bias conditions defined in a ratio to the maximum bias voltage value and that said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very far from the cell-site station" (e.g., '334 patent, cl. 4) because a POSITA would not have understood the scope and meaning of this term;

Maxell, Ltd.
Ex. 2005
Page 414 of 431

- "when said output intensity increases within the range of -50 dB to 0 dB" (e.g., '334 patent, cl. 6) because a POSITA would not have understood the scope and meaning of this term;
- "said bias condition increases gradually to the maximum value when said output intensity increases within the range of -50 dB to 0 dB" (e.g., '334 patent, cl. 6) because a POSITA would not have understood the scope and meaning of this term.

Claims 4 and 6 also fail the additional requirement of § 112, ¶ 2 requiring the claims cover "the subject matter which the inventor or joint inventor regards as his invention." These claims recite various conventional limitations which are described in the Background of the Invention of the '334 Patent. *Compare* '334 Patent, cls. 4, 6, *with id.*, cols. 1:6-2:18. Further, the specification does not tie such conventional technologies to the alleged invention claimed in these claims, especially the limitation reciting "controlling a gain of said variable amplitude amplifier and a bias condition of said power amplifier using a function defining a relation between bias data and gain data stored in said memory, in such a manner that said function uses bias conditions defined in a ratio to the maximum bias voltage value and that said bias condition increases gradually to the maximum value when output intensity increases to the value taken when said cellular telephone is very far from the cell-site station." *Compare id.*, cls. 4, 6, *with id.*, cols. 2:20-10:67.

3. '821 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the '821 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- "white balance control means for detecting an achromatic portion of an image of an object on the basis of chrominance signals formed from an output signal that is obtained from an image pickup device via an optical system and indicative of said object image, controlling gains of said chrominance signals in accordance with a deviation amount of white balance detected from said achromatic portion, and controlling the white balance" (e.g., '821 patent, cl. 6) because the specification fails to disclose adequate structure for this means-plus-function term;

Maxell, Ltd.
Ex. 2005
Page 415 of 431

- "controlling gains of said chrominance signals in accordance with a deviation amount of white balance detected from said achromatic portion, and controlling the white balance" (e.g., '821 patent, cl. 6) because a POSITA would not have been able to understand the scope and meaning of this term;
- "controlling the white balance" (e.g., '821 patent, cl. 6) because a POSITA would not have been able to understand the scope and meaning of this term;
- "object distance detecting means for detecting a distance to the object and outputting object distance detection information" (e.g., '821 patent, cl. 6) because the specification fails to disclose adequate structure for this means-plus-function term and because a POSITA would not have been able to understand the scope and meaning of this term;
- "zoom value detecting means for detecting a zoom value of said optical system and outputting zoom value information" (e.g., '821 patent, cl. 6) because the specification fails to disclose adequate structure for this means-plus-function term;
- "executes a correcting operation of the white balance deviation, comprising the steps of" (e.g., '821 patent, cl. 6) because a POSITA would not have been able to understand the scope and meaning of this term;
- "forming a white balance control amount adjustment value to adjust a white balance control amount for the gains of said white balance control means" (e.g., '821 patent, cl. 6) because a POSITA would not have been able to understand the scope and meaning of this term;
- "wherein as said white balance control amount adjustment value, an object distance threshold value for discriminating a magnitude of the distance to the object is formed on the basis of said object brightness information and said zoom value information, said object distance detection information is compared with said object distance threshold value information, thereby obtaining said white balance control amount adjustment value according to a result of the comparison" (e.g.,

Maxell, Ltd.
Ex. 2005
Page 416 of 431

’821 patent, cl. 6) because a POSITA would not have been able to understand the scope and meaning of this term;

- “wherein as said white balance control amount adjustment value, an object distance threshold value for discriminating a magnitude of the distance to the object is formed on the basis of said object brightness information and said zoom value information” (e.g., ’821 patent, cl. 6) because a POSITA would not have been able to understand the scope and meaning of this term;
- “said object distance detection information is compared with said object distance threshold value information, thereby obtaining said white balance control amount adjustment value according to a result of the comparison” (e.g., ’821 patent, cl. 6) because a POSITA would not have been able to understand the scope and meaning of this term.

4. ’188 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the ’188 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- “the change prohibiting device” / “the deciding device” (e.g., ’188 patent, cls. 4-6) because this term lacks antecedent basis.

5. ’493 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the ’493 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- “wherein the electric camera includes the features of an image sensing device … , a signal processing unit … , and a display unit” (e.g., ’493 patent, cl. 10) because the limitation’s outer boundaries are unclear

Maxell, Ltd.
Ex. 2005
Page 417 of 431

6. '449 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the '449 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- "the [first/second] group of video information" (e.g., '449 patent, cl. 9) because this term lacks antecedent basis.
- Claims 9-12 fail the additional requirement of § 112, ¶ 2 requiring the claims cover "the subject matter which the inventor or joint inventor regards as his invention." As explained above, '449 Patent (and '072 Patent) describe a "management" scheme with hierarchical levels, and provides a summary of a "management state of AV data on a recording medium" in Figure 1. In its response to LG's motion for judgment on the pleadings, Maxell contends that this management scheme reflects the alleged invention. D.I. 105 at 7. But as LG explained in its reply, the management scheme is not reflected in the claims. D.I. 113 at 2. LG incorporates by reference its motion for judgment on the pleadings and reply in support (D.I. 94, 113) herein.

7. '072 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the '072 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- Claims 11-15 fail the additional requirement of § 112, ¶ 2 requiring the claims cover "the subject matter which the inventor or joint inventor regards as his invention." As explained above, '072 Patent (and '449 Patent) describe a "management" scheme with hierarchical levels, and provides a summary of a "management state of AV data on a recording medium" in Figure 1. In its response to LG's motion for judgment on the pleadings, Maxell contends that this management scheme reflects the alleged invention. D.I. 105 at 7. But as LG explained in its reply, the management scheme is not reflected in the claims. D.I. 113 at 2. LG incorporates

Maxell, Ltd.
Ex. 2005
Page 418 of 431

by reference its motion for judgment on the pleadings and reply in support (D.I. 94, 113) herein.

8. '284 patent

One or more Asserted Claims, and/or terms of the Asserted Claims, of the '284 patent may suffer from defects that render them indefinite, at least under interpretations and/or applications of the claim language that Plaintiff appears to be asserting, including, for example:

- "connecting, via a second radio communication circuit, to an internet or a home network" (*e.g.*, '284 pat. at cl. 18) because the limitation's outer boundaries are unclear;
- "internet or a home network" (*e.g.*, '284 pat. at cl. 18) because the limitation's outer boundaries are unclear;
- "receiving digital information" (*e.g.*, '284 pat. at cl. 18) because the limitation's outer boundaries are unclear;
- "controlling the assignment such that the assignment between the first radio communication circuit and the external apparatus is prioritized more than the assignment between the second radio communication circuit and the internet or the home network when a user issues an indication to transmit digital video information by the first radio communication circuit while acquiring information from the internet or the home network by the second radio communication circuit." (*e.g.*, '284 pat. at cl. 18) because the limitation's outer boundaries are unclear;
- "while acquiring information from the internet or the home network" (*e.g.*, '284 pat. at cl. 18) because the limitation's outer boundaries are unclear;
- "internet or the home network" (*e.g.*, '284 pat. at cl. 18) because the limitation's outer boundaries are unclear; and
- "when a user issues an indication to transmit digital video information by the first radio communication circuit while acquiring information from the internet or the home network by the second radio communication circuit" (*e.g.*, '284 pat. at cl. 18) because the limitation's outer boundaries are unclear.

Maxell, Ltd.

Page 419 of 431

IV. Contentions Under 35 U.S.C. § 101

To be patentable subject matter under § 101, a claim must be directed to one of four eligible subject matter categories: "new and useful process, machine, manufacture, or composition of matter." 35 U.S.C. § 101. "Claims that fall within one of the four subject matter categories may nevertheless be ineligible if they encompass laws of nature, physical phenomena, or abstract ideas." *Digitech Image Techs., LLC v. Elecs. for Imaging, Inc.*, 758 F.3d 1344, 1350 (Fed. Cir. 2014) (citing *Diamond v. Chakrabarty*, 447 U.S. 303, 309 (1980)). The Supreme Court established a two-step test for deciding the subject matter eligibility of claims under § 101. *Alice Corp. Pty. Ltd. v. CLS Bank Int'l*, 134 S. Ct. 2347, 2355 (2014). First, the claims must be analyzed to determine whether they are drawn to one of the statutory exceptions, *i.e.*, a patent ineligible concept: an abstract idea, a law of nature, or a natural phenomenon. *See id.* Second, the elements of the claims must be viewed both individually and as an ordered combination to see if there is an "inventive concept." *Id.*; *see also Enfish, LLC v. Microsoft Corp.*, 822 F.3d 1327, 1335-36 (Fed. Cir. 2016). The claims are examined to determine if they merely invoke well-understood, routine, conventional components and activity to apply an abstract idea. *See, e.g.*, *Elec. Comm'n Techs. v. ShoppersChoice.com*, 958 F.3d 1179, 1180-82 (Fed. Cir. 2020).

Based on the information currently available, the asserted claims of the '188, '072, '449, and '760 Patents fail to claim patent-eligible subject matter under § 101 as explained in Defendants' Motion for Judgment on the Pleading (D.I. 94, 113), which are incorporated herein by reference. In addition the following patent also fail to recite patent-eligible subject matter for at least, the following reasons:

1. '334 patent

At least the asserted claims of the '334 Patent are invalid under 35 U.S.C. § 101 for failure to recite patent eligible subject matter. Specifically, the asserted claims of the '334 Patent are fatally abstract under the U.S. Supreme Court's decision in *Alice*.

Asserted claim 4 is representative of the asserted claims of the '334 Patent because dependent claim 6 does not modify the underlying abstract idea in claim 4. Dependent claim 6 merely provides a specific range for the "output intensity" claimed in claim 4. '334 Patent, cl. 6.

Maxell, Ltd.
Ex. 2005
Page 420 of 431

This difference between the claims offers no "distinctive significance of any claim limitations other than those included" in claim 4 and lacks any inventive contribution. *See Affinity Labs of Tex., LLC v. DIRECTV, LLC*, 838 F.3d 1253 at 1256 n.1 (Fed. Cir. 2016) (quotation omitted); *Mortg. Grader, Inc. v. First Choice Loan Servs. Inc.*, 811 F.3d 1314, 1324 n.6 (Fed. Cir. 2016).

***Alice*, Step 1:** Claims 4 and 6 of the '334 Patent are generally directed to the abstract idea of a "function" defining a relation between bias data and gain data, which is used to calculate and control gain and bias conditions of amplifiers in a transmitter of a cellular telephone used in a CDMA system. '334 Patent, cls. 4, 6. Claims directed to such mathematical formulas or relationships have long been held to involve abstract ideas, including mental processes. *See, e.g.*, *In re Killian*, 45 F.4th 1373, 1379 (Fed. Cir. 2022); *RecogniCorp, LLC v. Nintendo Co., Ltd.*, 855 F.3d 1322, 1326-28 (Fed. Cir. 2017); *Elec. Power Grp., LLC v. Alstom S.A.*, 830 F.3d 1350, 1353-54 (Fed. Cir. 2016); *CyberSource Corp. v. Retail Decisions, Inc.*, 654 F.3d 1366, 1371-73 (Fed. Cir. 2011); *Parker v. Flook*, 437 U.S. 584, 585-86 (1978).

***Alice*, Step 2:** Because claim 4 of the '334 Patent is directed to the abstract idea of using a function to calculate and control gain and bias conditions, the claims must add an "inventive concept" that ensures the patent amounts to significantly more than a patent on the ineligible idea itself. *Alice*, 573 U.S. at 222. The '334 Patent claims fail here because they add nothing more than conventional activities performed using conventional power control technology, as explained by the specification and prior art discussed in the patent itself, as well as the prior art identified in these contentions. The claims merely recite conventional "receiving," "generating," "converting," and "controlling" steps using conventional, generic cellular telephone technology, such as a "cellular telephone," a "transmitter" with "amplifier[s]," a "cell-site station" in a CDMA system, an "acoustic transducer," and various "signals." *E.g.*, '334 Patent, cl. 4. Similarly, claim 6 merely recites a conventional range of output intensity. The written description or figures of the '334 patent merely recite generic components and concepts, and nothing in the specification raises the concepts disclosed within to anything inventive, let alone non-abstract. *Broadband iTV, Inc. v. Amazon.com, Inc.*, 113 F.4th 1359, 1370 (Fed. Cir. 2024) ("When the patent's specification

Maxell, Ltd.
Ex. 2005
Page 421 of 431

describes the components and features listed in the claims generically, it supports the conclusion that these components and features are conventional.") (internal quotations omitted).

Nor can Maxell save the claims by arguing that the ordered combination of these conventional elements elevates the claims to patent-eligible status. *See Alice*, 573 U.S. at 217. Indeed, the elements of the claims recite abstract ideas to be performed on generic cellular components and thus "do not contain an inventive concept." *Two-Way Media*, 874 F.3d at 1339.

2. '821 patent

At least asserted claim 6 of the '821 Patent is invalid under 35 U.S.C. § 101 for failure to recite patent eligible subject matter. Specifically, the asserted claim of the '821 Patent is fatally abstract under the U.S. Supreme Court's decision in *Alice*.

***Alice*, Step 1:** Claim 6 of the '821 Patent is generally directed to the abstract idea of collecting information and forming a white balance adjustment amount based on the collected information. Rather than claiming any improvements in the art, claim 6 merely describes a method for using a conventional image forming device that can record an image (via an "image pickup device") and detect three aspects of the recorded image: object brightness, object distance, and zoom. *See* '821 patent at claim 6. Similar to *Elec. Power Grp., LLC v. Alstom S.A.*, the focus on claim 6 is simply on "collecting information, analyzing it, and displaying certain results of the collection and analysis." 830 F.3d 1350, 1353 (Fed. Cir. 2016). The subsequent claim recitations of claim 6 merely recite adjustments to the white balancing using these same three parameters—object brightness, object distance, and zoom—in different ways to perform white balancing on the image. *See* '821 patent at claim 6 ("wherein as said white balance control amount adjustment value, an object distance threshold value for discriminating a magnitude of the distance to the object is formed on the basis of said object brightness information and said zoom value information; and said object distance detection information is compared with said object distance threshold value information, thereby obtaining said white balance control amount adjustment value according to a result of the comparison"). Claim 6 of the '821 Patent does involves nothing more than collecting data (object brightness, object distance, and zoom) and determining a white balance based on the collected data. The white balancing itself (i.e., manipulation to the image data to

Maxell, Ltd.
Ex. 2005
Page 422 of 431

perform white balancing) is not even required to be performed by claim 6 – merely the determination of a white balancing adjustment amount is required.

Claim 6 is further directed to an abstract idea because it does not define any hardware structural components that perform any of the adjustments or comparisons to determine white balance. *See id.* Instead, claim 6 merely recites numerous comparisons and adjustments without any recitations regarding ***how*** white balancing is performed, how the three parameters relate to one another, or the use of the white balancing result in any tangible manner. This high-level claim is directed to the abstract idea itself. *See, e.g., Affinity Labs of Tex., LLC v. DIRECTV, LLC*, 838 F.3d 1253, 1258-59 (Fed. Cir. 2016) ("There is nothing in claim 1 that is directed to ***how*** to implement out-of-region broadcasting on a cellular telephone. Rather, the claim is drawn to the idea itself.") (emphasis added). The use of results-based functional language confirms that claim 6 of the '821 Patent is drawn to an abstract idea. *See Two-Way Media Ltd. v. Comcast Cable Comms., LLC*, 874 F.3d 1329,1337 (holding claims "using result-based functional language" were drawn to ineligible subject matter for failing to "sufficiently describe how to achieve these results in a non-abstract way."); *see also Affinity Labs of Texas, LLC v. Amaxon.com Inc.*, 838 F.3d 1266, 1269; *Dropbox, Inc. v, Synchronoss Techs. Inc*, 815 F. App'x 529, 537 (Fed. Cir. 2020) ("'[T]ransmitting' data, and 'retrieving' data are generalized steps to be performed on a computer using conventional computer activity.").

***Alice*, Step 2:** Because the claim 6 of the '821 Patent is directed to the abstract idea of collecting information and forming a white balance adjustment amount based on the collected information, the claims must add an "inventive concept" that ensures the patent amounts to significantly more than a patent on the ineligible idea itself. *Alice*, 573 U.S. at 222. The '821 Patent claim likewise fails here because it adds nothing more than conventional activities performed using conventional camera technology, as explained by the specification and prior art incorporated into the patent itself. The claims merely recite "white balance control means," "an image pickup device," "object distance detecting means," and "zoom value detecting means." *E.g.*, '821 Patent at claim 6. The written description or figures of the '821 patent merely recite generic computer components, and nothing in the specification raises the concepts disclosed within

Maxell, Ltd.
Ex. 2005
Page 423 of 431

to anything inventive, let alone non-abstract. *Broadband iTV, Inc. v. Amazon.com, Inc.*, 113 F.4th 1359, 1370 (Fed. Cir. 2024) ("When the patent's specification describes the components and features listed in the claims generically, it supports the conclusion that these components and features are conventional.") (internal quotations omitted).

Importantly, beyond results-based language, nothing in the '821 Patent's claim 6 or specification defines ***how*** white balance is adjusted based on the collected information or ***how*** the white balance adjustment is actually implemented on image data. This Court has found such limits of patent claims and specification ineligible at Step Two. *Cisco Sys.*, 386 F. Supp. 3d at 1200 ("But this is nothing more than a restatement of the idea of ranking and selecting devices based on antenna performance characteristics that the Court found to be abstract at step one . . . . The problem here is that nothing in the claim or the specification explains the technique in anything more than broad, generalized, functional terms."). Because these claims recite nothing more than generic computer implementation of the abstract ideas identified in Step One, they must fail. *Twilio, Inc.*, 249 F. Supp. 3d at 1150 ("claim 1 specifies steps at a high level of generality to carry out the abstract idea of selecting the best message routing option based on separately-transmitted feedback. Nothing in the claims or the specification suggests that any of its elements are arranged in a non-conventional or non-generic way. *See Data Engine Techs. LLC v. Google LLC*, 906 F.3d 999, 1013 (Fed. Cir. 2018) ("These claims do not recite anything more than simply stating the abstract idea while adding the words 'apply it.'") (internal quotations omitted).

Defendants further incorporate the discussion of the prior art above as additional evidence that these features were well known, routine, and conventional.

3. '284 patent

At least the asserted claims of the '284 Patent are invalid under 35 U.S.C. § 101 for failure to recite patent eligible subject matter. Specifically, the asserted claims of the '284 Patent are fatally abstract under the U.S. Supreme Court's decision in *Alice*.

Asserted claim 18 is representative because like claim 18, all independent claims recite nearly identical requirements of (1) connecting to an external apparatus to transmit video via a first radio communication circuit; (2) connecting to "an internet or a home network" via a second radio

Maxell, Ltd.
Ex. 2005
Page 424 of 431

communication circuit; and (3) controlling the assignment among those two connections, including controlling that assignment according to certain criteria. '284 patent at claims 1, 7, 13, 18. The dependent claims do not add anything further beyond additional criteria to control assignment as explained by (3). *Id.* at claims 2-6, 8-12, 14-15, 19-20.

***Alice*, Step 1:** The claims of the '284 Patent are generally directed to the abstract ideas of (i) controlling messaging routing in the telephony messaging field and (ii) ranking radio connections according to a criterion and selecting the radio connection with the highest rank to send video. Rather than claiming any improvements in the art, the '284 Patent's claim language merely describes a device (or method implemented thereby) that has two simultaneous connections, controls the assignment (e.g., transmission rate) over those two connections, and controlling the assignment of the first connection to be more than that of the second connection when the user "issues an indication" to send video via the first connection. *See* '284 patent at claim 18. Similar to the abstract "controlling messaging routing" claims in *Twilio, Inc. v. Telesign Corp.*, the claims here, which merely select a radio connection to send video along, are analogous to a person who chooses to send a package via FedEx, UPS, or USPS. 249 F. Supp. 3d 1123 (N.D. Cal. 2017). Similarly, insofar as the claims prioritize one connection over another, they are also abstract like the claims this Court found abstract in *Cisco Sys., Inc. v. Uniloc USA Inc.* because the claims are "directed to abstract ideas related to the ranking of information (whether message routing data, customer service representative profiles, or antenna performance) and taking subsequent action (whether routing of a delivery receipt, the selection of a customer service representative, or the selection of a master station) based on those rankings." 386 F. Supp. 3d 1186, 1195 (N.D. Cal. 2019) (citing *Twilio*, 249 F. Supp. at 1144). The claims of the '284 Patent only stand to control assignment (transmission rate) of two radio connections that respectively perform basic, well-known features of (1) transmitting video; and (2) downloading data from the Internet or a home network. Similarly, here, "the ['284] patent purports to rank [radio connections] based on [user indication], just as a prospective diner could rank restaurant choices." *See id.* Indeed, "Nothing in the patent's process for ranking the [radio connections] . . . describes anything that cannot be done manually or with a mental process." *See id.* at 1195-96.

Maxell, Ltd.
Ex. 2005
Page 425 of 431

Nothing about these claims recite specific functionality—just that they are done on a computer, making the claims further abstract for reciting generic computer implementation, as well. *See Elec. Power Grp., LLC v. Alstom S.A.*, 830 F.3d 1350, 1353-54 (Fed. Cir. 2016) ("the focus of the claims is not on such an improvement in computers as tools, but on certain independently abstract ideas that use computers as tools"); *Affinity Labs of Tex., LLC v. DIRECTV, LLC*, 838 F.3d 1253, 1258-59 (Fed. Cir. 2016) ("There is nothing in claim 1 that is directed to ***how*** to implement out-of-region broadcasting on a cellular telephone. Rather, the claim is drawn to the idea itself.") (emphasis added). Indeed, the use of results-based functional language further confirms that the '284 patent's claims are drawn to an abstract idea. *See Two-Way Media Ltd. v. Comcast Cable Comms., LLC*, 874 F.3d 1329,1337 (holding claims "using result-based functional language" were drawn to ineligible subject matter for failing to "sufficiently describe how to achieve these results in a non-abstract way."); *see also Affinity Labs of Texas, LLC v. Amaxon.com Inc.*, 838 F.3d 1266, 1269; *Dropbox, Inc. v, Synchronoss Techs. Inc*, 815 F. App'x 529, 537 (Fed. Cir. 2020) ("'[T]ransmitting' data, and 'retrieving' data are generalized steps to be performed on a computer using conventional computer activity.") (cleaned up).

***Alice*, Step 2:** Because the '284 Patent's claims are directed to the abstract ideas of controlling messaging routing and ranking radio connections, the claims must add an "inventive concept" that ensures the patent amounts to significantly more than a patent on the ineligible idea itself. *Alice*, 573 U.S. at 222. The '284 Patent claims likewise fail here because nothing more than conventional activities performed on conventional network equipment, as explained by the specification and prior art incorporated into the patent itself. The claims merely recite "video display" and "video processing" apparatuses and methods corresponding thereto with generic computer equipment including first and second "radio communication circuit[s]" and merely "a controller" to control those radio communication circuits. *E.g.*, '284 Patent at claim 18. The written description or figures of the '284 patent merely recite generic computer components, and nothing in the specification raises the concepts disclosed within to anything inventive, let alone non-abstract. *Broadband iTV, Inc. v. Amazon.com, Inc.*, 113 F.4th 1359, 1370 (Fed. Cir. Sept. 3, 2024) ("When the patent's specification describes the components and features listed in the claims

Maxell, Ltd.
Ex. 2005
Page 426 of 431

generically, it supports the conclusion that these components and features are conventional.") (cleaned up).

Importantly, beyond results-based language, nothing in the '284 Patent's claims or specification recite ***how*** assignment is controlled in the systems or ***how*** the claimed apparatuses and methods receive user indications to send video along a certain communication path.[3] This Court has found such limits of patent claims and specification ineligible at Step Two. *Cisco Sys.*, 386 F. Supp. 3d at 1200 ("But this is nothing more than a restatement of the idea of ranking and selecting devices based on antenna performance characteristics that the Court found to be abstract at step one . . . . The problem here is that nothing in the claim or the specification explains the technique in anything more than broad, generalized, functional terms."). Because these claims recite nothing more than generic computer implementation of the abstract ideas identified in Step One, they must fail. *Twilio, Inc.*, 249 F. Supp. 3d at 1150 ("claim 1 specifies steps at a high level of generality to carry out the abstract idea of selecting the best message routing option based on separately-transmitted feedback. Nothing in the claims or the specification suggests that any of its elements are arranged in a non-conventional or non-generic way."); *see also Data Engine Techs. LLC v. Google LLC*, 906 F.3d 999, 1013 (Fed. Cir. 2018) ("These claims do not recite anything more than simply stating the abstract idea while adding the words 'apply it.'") (cleaned up).

To be sure, the '284 patent's results-based, functional language does not advance any inventive concept either. Rather, the claims merely describe the desired function or outcome "without providing any limiting detail that confines the claim to a particular solution." *Affinity Labs*, 838 F.3d at 1269.

Defendants further incorporate the discussion of the prior art above as additional evidence that these features were well known, routine, and conventional.

4. '449 and '072 Patents

In addition to the invalidity under Section 101 for the '449 and '072 patents as shown in Defendants' motion for judgment on the pleadings, the '072 patent is invalid under Section 101

[3] It is not even clear from the patent ***what*** "controlling assignment" describes—let alone ***how*** it is performed. Indeed, the patent does not sufficiently disclose whether the scope of "assignment" is limited to transmission rate, or something more.

Maxell, Ltd.
Ex. 2005
Page 427 of 431

due to statutory double patenting in view of the '449 patent. Under 35 U.S.C. § 101, "[w]hoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor[.]" This section "prevents two patents from issuing on the same invention." *Application of Vogel*, 422 F.2d 438, 441 (C.C.P.A. 1970). Although two claims may use different words, the claim may nevertheless cover the "same invention." *Id.* ("claims may be differently worded and still define the same invention."). When the same invention is claimed twice, Section 101 prevents the second claim. *Id.* Plaintiff's interpretation of the claims of the '449 and '072 patents in its Patent L.R. 3-1 shows Plaintiff's interpretation of the '449 and '072 patents shows that these patents claim the same invention, and thus, the second patent—the '072 patent—is invalid.

V. Patent L.R. 3-4 – Document Production Accompanying Invalidity Contentions

A. Patent L.R. 3-4(a): Source code, specifications, schematics, flow charts, artwork, formulas, or other documentation sufficient to show the operation of any aspects or elements of an Accused Instrumentality identified by the patent claimant in its Patent L.R. 3-1(c) chart;

Based on their investigations to date, Defendants have produced or are producing materials pursuant to Patent L.R. 3-4(a) at Bates Nos. LGEMAX00000001-00067536, LGEMAX00067539-00081568, LGEMAX00082907-00082969, LGEMAX00083141-00083172, and LGEMAX00083209-00092164. In addition, Defendants hereby make source code for the accused products available for inspection in the Washington D.C. offices of Fish & Richardson P.C., to the extent such source code is in the possession, custody, and/or control of Defendants.

B. Patent L.R. 3-4(b): A copy or sample of the prior art identified pursuant to Patent L.R. 3-3(a) which does not appear in the file history of the patent(s) at issue. To the extent any such item is not in English, an English translation of the portion(s) relied upon shall be produced;

Based on their investigations to date, Defendants have produced or are producing materials pursuant to Patent L.R. 3-4(b) at Bates Nos. PA0000001-0026267.

Maxell, Ltd.
Ex. 2005
Page 428 of 431

C. Patent L.R. 3-4(c): All agreements that may be related to the accused instrumentality or may be comparable to a license that would result from a hypothetical reasonable royalty negotiation;

Based on their investigations to date, Defendants have produced or are producing materials pursuant to Patent L.R. 3-4(c) at Bates Nos. LGEMAX00082624-00082869.

D. Patent L.R. 3-4(d): Documents sufficient to show the sales, revenue, cost, and profits for accused instrumentalities identified pursuant to Patent L.R. 3-1(b) for any period of alleged infringement; and

Based on their investigations to date, Defendants have produced or are producing materials pursuant to Patent L.R. 3-4(d) at Bates Nos. LGEMAX00067537, LGEMAX00082870.

E. Patent L.R. 3-4(e): All agreements that may be used to support the party denying infringement's damages case. The producing party shall separately identify by production number which documents correspond to each category.

Based on their investigations to date, Defendants have produced or are producing materials pursuant to Patent L.R. 3-4(e), including at least all materials identified pursuant to Patent L.R. 3-4(c). To the extent discovery reveals other information responsive to this subsection, Defendants will produce such material.
