PRE-CONDITIONED AIR | 20-150 TON RATING

FCX sells Point-of-Use (DX) and Air Handler (Central Systems) units from 20- to 150-tons, designed for maximum efficiency, reliability and ease of maintenance in any airport, airline or military application.

FCX provides customers with comprehensive package of ground support product lines that include Power and PCAIR systems.

All units are equipped with a Variable Frequency Drive (VFD) to reduce blower speeds for substantial energy savings. The units are designed with optimal coil and compressor circuitry, which aids in lowering operating costs as well.

Removable side panels allow interior access to the unit for easy maintenance. This feature averts the removal of the PCA unit from the boarding bridge for any maintenance activities, which results in a significant cost savings for long-term upkeep.

Strategically placed vents offer industry-leading noise reduction.

All units use R410-A refrigerant, widely considered to be the most environmentally friendly and efficient throughout the industry.

To place an order for our PCA product line, contact sales@fcxinc.com or [request a quote online](#).
