19. SMART: Proposed, designed, and led implementation effort of a new version of the SMART system, 1980-2, written in the C language under UNIX. From 1986, extended this for use at Virginia Tech. The version of SMART further developed at Cornell by others since 1983 has been used around the world for information retrieval research. The databases called "CACM" and "ISI" developed 1980-2 for dissertation research with SMART have been used in scores of published studies, as benchmark test sets.

20. CED lexicon: Proposed and supervised preparation of a database form of the "Collins English Dictionary" that has been distributed from the Oxford Text Archive since 1988.
21. CODER: Proposed and supervised development of the COMposite Document Expert/extended/effective Retrieval System, 1985-92, which was used as a testbed for the study of artificial intelligence concepts in the field of information retrieval, and applied to electronic mail digests, navy messages, and literature (and thesaurus data) on cardiology.
22. LEND: Proposed and supervised development of the Large External object-oriented Network Database system, an object-oriented database management system, representing content as a graph/network, which was distributed starting in 1992 by Virginia Tech Intellectual Properties, and was used with both the CODER and MARIAN systems.
23. MARIAN: Proposed and supervised development starting in 1991 of the MARIAN system, an alternative to searching on the VTLS system for library catalog data. The campus production service version of this ran on a collection of PC and NeXTstep machines in the Computing Center and was designed to support scores of simultaneous users. It was built upon data and code from the CED lexicon and CODER (both developed here in the 1980s). With support from NLM, and new support from NSF, it was redone in Java to become a key part of our research on digital libraries.
24. ENVISION: Proposed and supervised development 1991-93, 1995 of Project Envision, developing a large hypermedia database (digital library) from the ACM publications, along with a retrieval system and graphical user interfaces to support access to the computer science literature.
25. TULIP: Technical coordinator for Virginia Tech's efforts to make about 40 journals in material science and engineering from Elsevier available for campus use, working with OCLC software
26. EI: Proposed and supervised development of Computer Science courseware and related digital library content, 1993-98, which has led to most CS courses at Virginia Tech having online materials, and some functioning essentially paperless, with up to 150K accesses/wk from local and world-wide users. URL: <http://ei.cs.vt.edu>
27. QUIZIT: Supervised development of an automated WWW-based quiz system to use with CS4624 and CS5604 as well as other courses like CS1604. This has led to several publications and is available for use. See the online papers and software under <http://ei.cs.vt.edu>
28. Boy Scout Computers Merit Badge web site used with local group
29. ETD: Supervised development of electronic thesis and dissertation related software and systems in connection with building the Networked Digital Library of Theses and Dissertations (NDLTD). This includes extensive online information at <http://www.ndltd.org>, and earlier info at <https://guides.lib.vt.edu/c.php?g=547528&p=5400003>, with documentation, automated submission software, multimedia tutorials, SGML/XML document type definitions, conversion tools (to SGML/XML, from SGML/XML to HTML), services (searching, browsing, submission, and conversion from PostScript to PDF), and adaptation of Open Archives Initiative. Collaboration on these efforts includes staff on multiple grants, personnel in Graduate School, Library, Computing Center, and other universities. The Library now maintains the <http://etd.vt.edu> site, while I am responsible for domains ndltd.org and theses.org (also known as dissertations.org) and related listservs. As Executive Director of NDLTD, I coordinate efforts of its members; in March 2000 roughly 225 people attended our 3rd International Symposium, and similar numbers have continued in subsequent years. According to Don Fischer, Program Officer at FIPSE (US Dept. of Education), in email dated 2/14/2000 "Your work is outstanding. Your outreach efforts are incredibly extensive."
30. NRG: The Web Characterization Repository developed for the WWW Consortium (W3C), helped catalog papers, tools, and trace files related to Web traffic characterization. It was used by researchers and practitioners worldwide. URL: <https://www.w3.org/WCA/>
31. CSTC: The Computer Science Teaching Center (www.cstc.org) was hosted at Virginia Tech where I served as an editor and was responsible for the software, server, and repository. This supported teachers and learners interested in computing. This led to CITIDEL - see below.
32. Open Archives Initiative: This international digital library initiative involves specifications, protocols, and other standards (www.openarchives.org). I was one of the founding members and served on the Steering Committee. Virginia Tech students developed a range of widely used software to support development, testing, and operation. I proposed and ran 2 workshops for OAI in 2000 and one in 2001, attended the public launch meeting 1/23/2001, and had several grants related that yielded new tools.
33. CITIDEL: Computing and Information Technology Interactive Digital Educational Library, www.citidel.org, collection effort that is part of NSDL (www.nsdl.org), supporting English and Spanish access to resources to help with teaching and learning about computing and IT, for various ages and types

of users, incorporating CSTC, ACM JERIC, NCSTRL, ResearchIndex, and other content. Collaborative project funded by NSF for 2001-2003, with College of NJ, Hofstra, Penn State, and Villanova. This led to Ensemble - see below.

34. Crawls: In collaboration with Charlie Clarke at U. of Waterloo, crawls of large parts of WWW to allow research with large text collections. One collection of 1 Tbyte was collected in 2001. Another collection, focused on government content, was collected and was adapted to yield a new TREC test collection for 2002.
35. PlanetMath and PlanetPhysics: www.planetmath.org and www.planetphysics.org are online community-based encyclopedia initiatives, covering mathematics (and a little computer science) and physics. Software used was developed by Aaron Krowne, whose MS thesis on this I supervised. Mr. Krowne continues to run the sites, which Virginia Tech hosted under my supervision.
36. ETANA: <http://www.etana.org/>; developed at Virginia Tech, then ported to Vanderbilt Library that agreed to sustain this effort to provide coordinated access to archaeological information.
37. Digital library curricular guidelines and modules available on our web site (<http://curric.dlib.vt.edu/>), through Wikiversity (http://en.wikiversity.org/wiki/Curriculum_on_Digital_Libraries), and as a collection in Ensemble (see on <http://www.computingportal.org/collections>) that also was available through the National Science Digital Library (NSDL)
38. Ensemble Portal: <http://www.computingportal.org>, with Virginia Tech leading work on the distributed portal, with PI Boots Cassel managing the overall Ensemble effort involving 6 universities as well as other partners - the Computing Portal in NSF's NSDL (National Science Digital Library). This portal to educational resources in computing was expanded in 2016-2017 through machine learning methods to include entries from YouTube and SlideShare. ULR: <https://conifer.rhizome.org/RaeAllen/ensemble-computing-portal/>
39. Crisis, Tragedy, and Recovery Network (CTRnet): <http://www.ctrnet.net>; developed at Virginia Tech with NSF funding, and partnering with the Internet Archive; digital library and archiving support related to communities, supporters, and scholars working with disasters and emergencies URL: <http://eventsarchive.org/>
40. IDEAL (Integrated Digital Event Archiving and Library) and GETAR (Global Event and Trend Archive Research): <http://eventsarchive.org>. Making use of a Hadoop cluster with more than 20 nodes and more than 150 terabytes of storage, these NSF funded projects support an advanced information retrieval system integrating search engine and Web archiving technologies, including collecting tweets, focused crawling for webpages, classification, topic analysis, clustering, entity recognition, geo-location, indexing, searching, and multiple user interfaces. URL: <http://eventsarchive.org/>
41. Social Interactome, an NIH-funded project, running clinical trials on interventions employing social networks to aid with recovery from addictions, uses a series of virtual machines in Computer Science, as well as other services at VTCRI (managed by PI Warren Bickel), involving an enhanced version of Friendica and related interface and analysis software.
42. CINES: Net.Science is the cyberinfrastructure developed since 2018 on an NSF funded project led by Madhav Marathe, in which I collaborated through 10/31/2023. URL: <https://net.science/home>
43. Opening Books and the National Corpus of Graduate Research: Extending our work with ETDs through research, leading to theses, dissertations, patent filings, and publications. URLs: <https://dlib.vt.edu/Research/etd.html>, <https://opening-etds.github.io/>

DIGITAL LIBRARY RESEARCH LABORATORY (DLRL, www.dlib.vt.edu) (earlier: INFORMATION ACCESS LABORATORY):

- Fox was director of the NSF supported Information Access Laboratory in Computer Science. His offices at the Computing Center were moved to 840 Pointe West Commons (PWC), Suite 8, allowing merger with the IAL, and the new complex is now the DLRL, located at 2030 Torgersen Hall. We are responsible for domains including: dissertations.org, theses.org, ndltd.org, and dlib.vt.edu.
- Facilities dating back to the early 1990s have included (in addition to upgrades/replacements/additions):
 - VT-PetaPlex-1, with 2.5 terabytes of disk storage, over 100 processors, developed by Knowledge Systems Incorporated, a very early cluster focused on storage

- Roughly \$770K of hardware donated by IBM for digital library research, located in Computing Center, PWC, or engaged in logging in locations around campus
- A wide variety of PC-based workstations purchased 2001-2002
- Older servers of various types, including DEC Alpha, Sun Ultra, Gateway, Mac, IBM
- Multimedia peripherals: camcorders and cameras, VTRs (digital, Betacam, Hi-8, SVHS, U-matic), audio units (CD-DA, DAT, cassette), laserdisk player, preamp, amplifier, mixer, CD-ROM drives, professional microphones, headphones, speakers, monitors - many donated to VT's New Media Center in return for access by classes and research groups
- CD-ROM production (Kodak PCD Writer 225) for DOS/Mac/UNIX
- Current facilities include servers (in the Computing Center and in 2070 Torgersen Hall), and servers and virtual machines in Computer Science, as well as a full lab of units at DLRL.
