THE hydrafacial® COMPANY

HydraFacial™ Tower System

Features

The Touch is our first generation, multi-modality system. The touch screen design allows you to access basic instructions and other product information, while convenient tool holders keep all of your supplies within reach.

Enhance your HydraFacial

The Touch includes added modalities: detoxifying Mechanical Lymphatic Drainage to start your treatment and LED Light Therapy as the perfect finishing touch to restore a healthy and radiant glow.

Get a Boost

The Touch is designed to work with the patented cartridge handpiece for easy application, measurable serum flow, and durability. The cartridge handpiece allows you to add booster vials to up-sell each treatment. The vials are convenient to use and compact to store.
