Geofencing

by Technology Expert

Margaret Rouse <

<https://www.techopedia.com/contributors/margaret-rouse>>

Updated on

23 February 2012

What Does Geofencing Mean?

Geofencing is a technology that defines a virtual boundary around a real-world geographical area. In doing so, a radius of interest is established that can trigger an action in a geo-enabled phone or other portable electronic device.

Advertisements

Techopedia Explains Geofencing

Geofencing allows automatic alerts to be generated based on the defined coordinates of a geographic area. A

boundary surrounding the house. When the child's cell phone enters this area, an email is automatically sent to the child's parent by a geofence-enabled app on the phone.

Triggers do not have to happen because of a physical presence. It would be possible to establish a geofence area around a neighborhood and have alerts sent out on garbage collection days based on a schedule entered in a geofence-enabled app by the local government or collection company.
