Get parameters in url

By [randeepkandhola](#) on 3 Oct 2007 at 19:08 UTC

I am a newbie to drupal community. So please bear with me if it's really a basic question.

A 3rd party site will be sending paramteres to my drupal module using "get method". These paramters will have a url and some other information. So they will be hitting my module with a url something like
`http://{domain_name}/mymodule/channel/publisher=yahoo&url=http://www.yahoo.com` where 'mymodule/channel' is the path set inside the hook_menu() function. When I get these paramters inside my module they get parsed for every '&' and '/' by drupal system. How can I get intact paramter values as we do in php using `_REQUEST`.

Any help will be highly appreciated.

Thanks in advance.

Randeep

Maybe \$url1 = \$arg(1) You

[amitaibu](#) Hebrew Israel commented 18 years ago

Maybe `$url1 = $arg(1)`

You can also use the token module to get Arguments from the url [path:arg-x] or something similar.

@Amitaibu your comment was

[luco](#) commented 13 years ago

@Amitaibu

your comment was really helpful. thank you!

but it's actually `$url1 = arg(1)`, because `arg` is a function, not a variable. ;)

cheers

I'm assuming that your url

[gpk](#) commented 18 years ago

I'm assuming that your url intended to include the ?, i.e.

`http://{domain_name}/mymodule/channel/?`

`publisher=yahoo&url=http://www.yahoo.com`

(Note that if your site is not running clean URLs the URL would need to be of the form

`http://{domain_name}/?`

`q=mymodule/channel/&publisher=yahoo&url=http://www.yahoo.com)`

In either case you can use `$_GET` in the usual way, so `$_GET['publisher']` and `$_GET['url']` will contain the parameter values you are after.

And note that because of Drupal's `mod_rewrite` trickery, `$_GET['q']` (in either case) will be populated with `mymodule/channel`.

The `arg()` function may not help you here ... `arg()` simply explodes `$_GET['q']` on `/`, so that `arg(0) = mymodule` and `arg(1) = channel`.

This worked for me. I have clean urls turned on and I couldn't pass more than 1 "get" variable before it would crop off the rest of them. So I used the method ? x=foo/bar/foo2/bar2 and then did `split($_GET['x'])` to retrieve all of the variables.

Thanks for the reply.

Get the parameter in the URL

[jolava](#) commented 13 years ago

For those who want to see the alias path url instead of the Drupal internal url (node/\$/nid), here is the function I use:

```
function url_alias_path() {  
  return explode('/', $_SERVER['REQUEST_URI']);  
}
```

It returns an array with all the parameters in the URL.

Same thing but for any pages

[cyberitch](#) commented 10 years ago

If I want Drupal to store a parameter passed to any section of the web site so I can access it in a specific module, how would I do that.

For example:

<http://DrupalSite.com/?para=123>

<http://DrupalSite.com/products/?para=123>

How can I catch \$_GET['para'] and store it in Drupal session or any where else so in my custom module I can read the 'para'?

Thank you

<?php\$_SESSION['para'] = \$

jaypan Victoria, BC *commented 10 years ago*

```
$parameters = drupal_get_query_parameters();  
if(isset($parameters['para']))  
{  
    $_SESSION['para'] = $parameters['para'];  
}
```

Hi I am trying to get data

anbudhan *commented 10 years ago*

Hi I am trying to get data from drupal service api using postman.

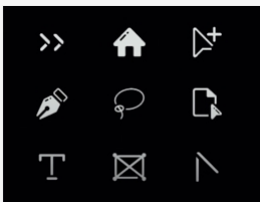

[https://btycc-prod..net/api/v1/entity_commerce_product?parameters\[create...](https://btycc-prod..net/api/v1/entity_commerce_product?parameters[create...)

can some one tell me how to get set the parameter to download lesserthan a specific date?

I tried https://bcc-prod.codeenigma.net/api/v1/entity_commerce_product?parameter...<=1428930969:

but it is not working. any help will be hugely appreciated
