Detection of an object and depth estimation is very crucial in the field of computer vision, facilitating tasks in the field of autonomous navigation, scene understanding and many more. There are lot challenges in the current existing technique such as occlusion and accuracy issues, impeding their real-world...

March 2020 · 255 Reads · 9 Citations

International Journal of Machine Learning and Cybernetics

Junning Zhang · Qunxing Su · Pengyuan Liu · [...] · Yanlong Chen

We propose DPCNN (Depth and Pose Convolutional Network), a novel framework for monocular depth with absolute scale and camera motion estimation from videos. DPCNN uses our proposed stereo training examples, in which the spatial and temporal images can be combined more closely, thus providing more...
