Description : Algorithms Developers (28375)

We are looking for a few excellent developers with experience in programming and problems solving. Our company has an amazing algorithms department, where you can develop yourself and interact with top experts.

A developer in the algorithms department will be involved in some or all of the following tasks:

- Prototyping a solution for a complex computer vision problem
- Analyzing massive amounts of data to identify a problem root cause
- Efficiently implementing a module in C++

Requirements:

- Excellent B.Sc. graduates in Computer Science or a similar field from leading institutions (for some of the developer positions M.Sc./PhD is an advantage)
- Good knowledge of C++
- Knowledge of Matlab/Python is an advantage
- Background in computer vision and machine learning is a big advantage
- Some experience with industrial software development is an advantage
- Background in DNN is an advantage
- Background in SLAM is an advantage for some of the developers positions

Location Jerusalem
