

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

META PLATFORMS, INC.,
Petitioner,

v.

MULLEN INDUSTRIES LLC,
Patent Owner.

Case No. IPR2025-00741
U.S. Patent No. 11,376,493

PATENT OWNER'S PRELIMINARY SUR-REPLY

Patent Owner’s (“PO”) construction of “physical playfield” is correct because it is consistently supported by the intrinsic and extrinsic evidence, and common sense. Petitioner’s arguments to the contrary are unpersuasive, as explained below.

I. A “PHYSICAL PLAYFIELD” IS “A BOUNDED PHYSICAL PLAY SPACE”; THERE ARE NO “UNBOUNDED” EMBODIMENTS, WHICH WOULD BE NONSENSICAL

Contrary to Petitioner’s arguments, PO’s construction does not exclude embodiments of a physical playfield. Petitioner alleges that the specification teaches examples of an “unbounded” “physical playfield” in the specification, but there is no such embodiment. As PO explained, the first quotation Petitioner relies on—“[A] physical playfield (e.g., the physical world, a physical environment, or a defined physical playfield)” —supports PO’s construction. POPR, 20-23. It does *not* imply that some playfields are bounded and some are not and does *not* say that the entire world is a “physical playfield,” which would be nonsensical. It would indeed render the term meaningless to equate a physical playfield with the entire world; a user would always be on, and never off, the playfield.¹ The examples in the quotation

¹ It is well-understood, common sense that a “playfield” has boundaries defining whether one is on, or off, the playfield. As the iconic Hank Aaron said, “My motto was always to keep swinging. Whether I was in a slump or feeling badly or having

above distinguish that some physical playfields are from the “physical world” or a “physical environment,” *e.g.*, marked pieces of land such as a backyard, a soccer field, or a “square area of a military base” (Ex. 1001, 12:14-15, 5:31-32), and some are “defined physical playfields,” such as a playmat, which is not a piece of land but is another type of physical playfield (*id.*, 2:40-3:3, 3:24-26, 8:55-9:2, 9:27-33).

Further, Earth as a whole is not described as a physical playfield, including in Petitioner’s second citation, “the game world corresponds to an actual area of the physical world (such as the planet Earth or New York City).” Ex. 1001, 11:17-19. That quote states that an “**area of** the physical world” (*i.e.*, a bounded physical play space) corresponds to the game world—**not** the whole physical world.

The term “physical playfield” is mentioned in the specification six more times. In every such instance, which Petitioner ignores, the specification again clearly supports PO’s construction. *Id.*, 2:67-3:3 (“**physical playfield perimeters**”); 3:49-50; 3:53-55; 6:15-17 (describing FIG. 3 clearly depicting a **bounded space**); 6:50-52 (describing FIG. 13 clearly depicting a **bounded space**); 7:27-30.

Petitioner next argues incorrectly that the claims recite an augmented reality system. Reply, p.2. But “augmented reality” appears nowhere in any claim.

troubles off the field, the only thing to do was keep swinging.” This wisdom leverages a playfield’s boundaries, to apply on-field lessons to life off of the field.

Petitioner’s additional arguments in Section II are inapposite. The POPR did not argue that each example is required by the challenged claims; however, all of the examples do show the specification’s consistent usage of the term “physical playfield” to mean a bounded play space, which is common sense. Even in embodiments in which “actual playfield data may not be stored at all so that only virtual playfield data is stored,” which the Reply points to, the specification states it also stores “scaling information to convert the information to information *useable on a particular actual playfield.*” Ex. 1001, 12:32-35. Petitioner cuts its quotation halfway through the sentence. However, scaling information is the correspondence between physical and virtual playfield sizes (*id.*, FIG. 3, 10:29-15:3), and imposes boundaries on the physical playfield. Whether the bounded play space is scanned before or during gameplay is irrelevant. Petitioner’s selective quote also omits that it refers to a “landscape of a *pre-determined area (e.g., a particular square area of a military based [sic]) . . . being scanned as a game is playing,*” which likewise confirms that the playfield (pre-determined area) is bounded. *Id.*, 5:28-36.

II. THE EXTRINSIC EVIDENCE IS RELEVANT

Petitioner argues nonsensically that because the boundaries of the play space need not be hard rails, the dictionary definitions do not apply. Like the challenged patent, the dictionaries describe bounded physical play spaces without hard physical boundaries like rails, confirming a POSITA’s understanding of “physical playfield.”

CERTIFICATE OF SERVICE

I certify that a copy of this Patent Owner's Preliminary Sur-Reply is being served by electronic mail on the following counsel of record:

Lead Counsel

Heidi L. Keefe
(Reg. No. 40,673)
COOLEY LLP
1299 Pennsylvania Ave. NW,
Suite 700
Washington, DC 20004
Telephone: (650) 843-5001
Facsimile: (650) 849-7400
hkeefe@cooley.com

Backup Counsel

Phillip E. Morton
(Reg. No. 57,835)
